Centre for Clinical Practice – Surveillance Programme

Recommendation for Guidance Executive

Clinical guideline

CG153: The assessment and management of psoriasis

Publication date

October 2012

Surveillance report for GE

November 2014 (2 year surveillance review)

Surveillance recommendation

Further to the Evidence Update on CG153: The assessment and management of psoriasis, where no impacts were identified, GE is asked to consider the proposal to not update the guideline at this time.

Key findings

			Potential impact on guidance	
			Yes	No
Evidence identified from Evidence Update				✓
Anti-discrimination and equalities considerations				✓
No update	CGUT update	Standard update	Transfer to static list	Change review cycle
✓				

NATIONAL INSTITUTE FOR HEALTH AND CARE EXCELLENCE

Centre for Clinical Practice – Surveillance Programme

Surveillance review of CG153: The assessment and management of psoriasis

Recommendation for Guidance Executive

Background information

Guideline issue date: October 2012

NCC: National Clinical Guideline Centre

Main findings of the current two year surveillance review

1. The [Evidence Update](#) on CG153: Psoriasis was used as the primary source of evidence for this surveillance decision (search dates: 8 March 2012 to 9 June 2014). A summary of the evidence is provided in the Evidence Update.
2. The Evidence Update indicates that there is currently insufficient new evidence to invalidate the existing guideline recommendations. Therefore the Surveillance Programme recommends no update at this time.

Ongoing research

3. Not considered at the 2-year review point.

Anti-discrimination and equalities considerations

4. None identified through the Evidence Update.

Implications for other NICE programmes

5. None identified through the Evidence Update.

Surveillance recommendation

6. GE is asked to consider the proposal to not update the guideline at this time. GE is asked to note that as a 2-year surveillance decision this 'no to update' proposal will not be consulted on.
