

# NATIONAL INSTITUTE FOR HEALTH AND CARE EXCELLENCE

## Guideline scope

### Renal replacement therapy including conservative care

#### ***Topic***

NHS England has asked NICE to develop a guideline on renal replacement therapy (RRT), including conservative care and transplant.

This guideline will also be used to update the NICE quality standard for RRT.

The guideline will be developed using the methods and processes outlined in [Developing NICE guidelines: the manual](#).

For more information about why this guideline is being developed, and how the guideline will fit into current practice, see the [context](#) section.

#### ***Who the guideline is for***

- People using services, families and carers and the public.
- Healthcare professionals in primary care.
- Healthcare professionals in secondary / tertiary care.
- Providers of RRT.

It may also be relevant for:

- Private sector or voluntary organisations commissioned to provide services for the NHS or local authorities

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#).

## 27 ***Equality considerations***

28 NICE has carried out [an equality impact assessment](#) during scoping. The  
29 assessment:

- 30 • lists equality issues identified, and how they have been addressed
- 31 • explains why any groups are excluded from the scope.

32 The guideline will look at inequalities relating to access issues in rural areas,  
33 age, minority groups and social class.

## 34 **1 What the guideline is about**

35

### 36 ***1.1 Who is the focus?***

#### 37 **Groups that will be covered**

- 38 • Adults (18 and over) with chronic kidney disease (CKD) stages 4 and 5.
- 39 • Children (under 18) with CKD stages 4 & 5.
- 40 • The following groups have been identified as needing special

41 consideration:

42 - Older people.

43 - Infants (under 2).

44 - People from Black, Asian and minority communities.

45 - People with type 1 and type 2 diabetes.

46 - People who have RRT without previous planning .

47

48

#### 49 **Groups that will not be covered**

- 50 • People with CKD stages 1- 3.

## 51 **1.2 Settings**

### 52 **Settings that will be covered**

- 53 • All settings where NHS commissioned care is provided to people who  
54 might need renal replacement (including care at home)

55

## 56 **1.3 Activities, services or aspects of care**

57 We will look at evidence on the areas listed below when developing the  
58 guideline, but it may not be possible to make recommendations on all the  
59 areas.

### 60 **Key areas that will be covered**

61

- 62 1 Assessment and review for people with deteriorating renal function who  
63 appear likely to need RRT.
- 64 2 Information, education and support for people who may need RRT and  
65 their families or carers.
- 66 3 Decision-making for people who may need RRT and their families or  
67 carers, including the option of conservative management.
- 68 4 Renal replacement therapy or conservative management - which  
69 modality for which person and when.
- 70 5 Symptom management.
- 71 6 Diet and fluid management.
- 72 7 Ongoing care including transferring between forms of RRT (for example,  
73 follow-up and review, switching between in-centre and home dialysis).
- 74 8 Discontinuing RRT.
- 75 9 Coordination of care between different specialties involved in the care of  
76 patients (for example diabetes/cardiology/liver specialists/primary  
77 care/mental health teams).

### 78 **Areas that will not be covered**

- 79 1 Management of CKD.
- 80 2 Management of acute kidney injury.

- 81 3 Anaemia in CKD.
- 82 4 Bone mineral disorder.
- 83 5 Technical aspects of delivery of RRT.
- 84 6 Management of growth in children with CKD.

#### 85 **1.4 Economic aspects**

86 We will take economic aspects into account when making recommendations.  
87 We will develop an economic plan that states for each review question (or key  
88 area in the scope) whether economic considerations are relevant, and if so  
89 whether this is an area that should be prioritised for economic modelling and  
90 analysis. We will review the economic evidence and carry out economic  
91 analyses primarily using an NHS and Personal Social Services (PSS)  
92 perspective.

#### 93 **1.5 Key issues and questions**

94 While writing this scope, we have identified the following key issues, and key  
95 questions related to them:

- 96 1 When should people with progression to later stages of CKD be  
97 assessed for RRT?
- 98 2 What assessment (for example history, examination, investigations) is  
99 needed for those people with deteriorating CKD being considered for  
100 RRT?
- 101 3 What information, education and support is useful for people and their  
102 families/ carers when considering RRT, when transitioning from one form  
103 of RRT to another or considering conservative management?
- 104 4 How should decision-making for people who may need RRT be  
105 supported?
- 106 5 What is the most clinical and cost effective way of preparing patients for  
107 RRT (for example planning, timeliness of access formation and  
108 transplant listing)?
- 109 6 What is the clinical and cost effectiveness of each form of RRT?
- 110 7 Are there factors which suggest that certain forms of RRT may be more  
111 appropriate for certain groups of people?

- 112 8 What are the indicators for initiating RRT?
- 113 9 Are there groups of people in which conservative management is more  
114 appropriate than RRT?
- 115 10 What are the most important symptoms to manage for people being  
116 prepared for RRT, undergoing RRT or receiving conservative  
117 management of end-stage CKD?
- 118 11 What is the clinical and cost effectiveness of diet, and fluid management  
119 in people being prepared for RRT, undergoing RRT or receiving  
120 conservative management of end-stage CKD?
- 121 12 What is the most clinical and cost effective way of delivering care during  
122 renal replacement therapy (for example co-ordination between  
123 specialties, follow-up, review)?
- 124 13 What is the clinical and cost effectiveness of different sequences of RRT  
125 in people with end stage CKD?
- 126 14 What are the indicators for transferring between the different forms of  
127 RRT?
- 128 15 What are the indicators for discontinuing RRT?

## 129 **1.6 Main outcomes**

130 The main outcomes that may be considered when searching for and  
131 assessing the evidence are:

- 132 1 Health-related quality of life (for example EQ-5D, SF-36)
- 133 2 Symptom scores and functional measures
- 134 3 Psychological distress and mental wellbeing
- 135 4 Patient, family and carer experience of care
- 136 5 Survival (mortality)
- 137 6 Growth
- 138 7 Malignancy
- 139 8 Adverse events
- 140 – infections
- 141 – vascular access issues
- 142 – dialysis access issues (for example peritoneal dialysis catheter)
- 143 – hospitalisation

144 – family and carer outcomes

145 – time to modality failure

## 146 **2 Links with other NICE guidance, NICE quality** 147 **standards, and NICE Pathways**

### 148 **2.1 NICE guidance**

#### 149 **NICE guidance that will be updated by this guideline**

- 150 • [Chronic kidney disease \(stage 5\): peritoneal dialysis](#) (2011) NICE guideline  
151 CG125
- 152 • [Guidance on home compared with hospital haemodialysis for patients with](#)  
153 [end-stage renal failure](#) (2002) NICE technology appraisal guidance TA48

#### 154 **NICE guidance about the experience of people using NHS services**

155 NICE has produced the following guidance on the experience of people using  
156 the NHS. This guideline will not include additional recommendations on these  
157 topics unless there are specific issues related to renal replacement therapy:

- 158 • [Patient experience in adult NHS services](#) (2012) NICE guideline CG138
- 159 • [Service user experience in adult mental health](#) (2011) NICE guideline  
160 CG136
- 161 • [Medicines adherence](#) (2009) NICE guideline CG76
- 162 • [Transition from children's to adults' services for young people using health](#)  
163 [or social care services](#) (2016) NICE guideline NG43

#### 164 **NICE guidance that is closely related to this guideline**

##### 165 ***Published***

166 NICE has published the following guidance that is closely related to this  
167 guideline:

- 168 • [Chronic kidney disease in adults: assessment and management](#) (2014)  
169 NICE guideline CG182
- 170 • [Chronic kidney disease: managing anaemia](#) (2015) NICE guideline NG8

- 171 • [Acute kidney injury](#) (2013) NICE guideline CG169
- 172 • [Chronic kidney disease \(stage 4 or 5\): management of](#)
- 173 [hyperphosphataemia](#) (2013) NICE guideline CG157
- 174 • [Tolvaptan for treating autosomal dominant polycystic kidney disease](#) (2015)
- 175 NICE technology appraisal guidance 358
- 176 • [Machine perfusion systems and cold static storage of kidneys from](#)
- 177 [deceased donors](#) (2009) NICE technology appraisal guidance 165
- 178 • [Cinacalcet for the treatment of secondary hyperparathyroidism in patients](#)
- 179 [with end-stage renal disease on maintenance dialysis therapy](#) (2007) NICE
- 180 technology appraisal guidance 117
- 181 • [Immunosuppressive therapy for renal transplantation in adults](#) (2004) NICE
- 182 technology appraisal guidance 85
- 183 • [Guidance on the use of ultrasound locating devices for placing central](#)
- 184 [venous catheters](#) (2002) NICE technology appraisal guidance 49
- 185 • [Acute kidney injury \(AKI\): use of medicines in people with or at increased](#)
- 186 [risk of AKI](#) (2016) NICE advice KTT17

### 187 ***In development***

188 NICE is currently developing the following guidance that is closely related to  
189 this guideline:

- 190 • [Kidney transplantation \(children, adolescents\) - immunosuppressive](#)
- 191 [regimens](#) (review of TA99) NICE technology appraisal. Publication date to
- 192 be confirmed.
- 193 • [Kidney transplantation \(rejection\) - everolimus](#) NICE technology appraisal.
- 194 Publication date to be confirmed.
- 195 • [Multiple frequency bioimpedance devices \(BCM - Body Composition](#)
- 196 [Monitor, BioScan 920-II, BioScan touch i8, InBody S10 and MultiScan](#)
- 197 [5000\) for fluid management in people with chronic kidney disease having](#)
- 198 [dialysis](#) Diagnostics guidance. Publication expected June 2017.

## 199 **2.2 NICE quality standards**

200 **NICE quality standards that may need to be revised or updated when**  
201 **this guideline is published**

- 202 • [Renal replacement therapy services for adults](#) (2014) NICE quality  
203 standard 72
- 204 • [Chronic kidney disease in adults](#) (2011) NICE quality standard 5
- 205 • [Acute kidney injury](#) (2014) NICE quality standard 76

206 **NICE quality standards that may use this guideline as an evidence**  
207 **source when they are being developed**

## 208 **2.3 NICE Pathways**

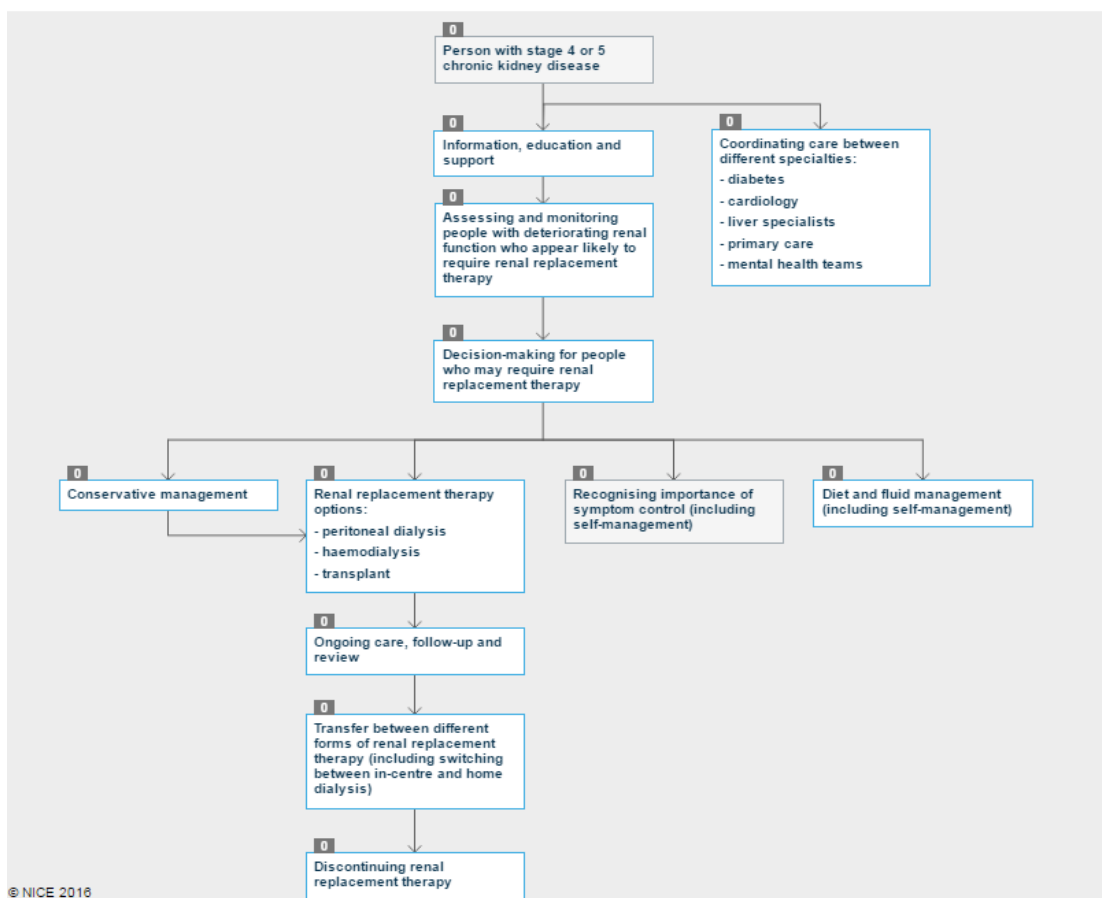

209 When this guideline is published, the recommendations will be added to [NICE](#)  
210 [Pathways](#). NICE Pathways bring together all related NICE guidance and  
211 associated products on a topic in an interactive topic-based flow chart.

212 A draft pathway outline on renal replacement therapy, based on the draft  
213 scope, is included below. It will be adapted and more detail added as the  
214 recommendations are written during guideline development.

215 This pathway will be integrated into the NICE pathway on [kidney conditions](#)  
216 and is relevant to the NICE pathway on [chronic kidney disease](#).

## Renal replacement therapy overview

217

218 **3 Context**219 **3.1 Key facts and figures**

220 The kidneys excrete certain waste products, excess water, acid and salts from  
 221 the body. People with CKD have an irreversible and progressive decrease in  
 222 kidney function. CKD may affect up to 4-5% of the adult UK population.

223 In 2% of people with CKD, the condition progresses to kidney failure, and  
 224 RRT is needed for survival. RRT essentially comprises either transplantation  
 225 or dialysis (artificially removing waste products and excess water from the  
 226 blood). There are 2 main types of dialysis: haemodialysis (where the blood is  
 227 filtered outside of the body using a dialysis machine) and peritoneal dialysis  
 228 (where the person's abdominal lining is used to filter the blood).

229 In the UK approximately 60,000 adults and 1,000 children are on RRT,  
 230 including transplant. The incidence of patients with renal failure requiring RRT

231 is approximately 115 per million population and in 2014, a total of 7,411 adults  
232 and children had RRT initiated. The median age of all people newly requiring  
233 RRT was 64.8 years, although this varied by ethnicity: 66.4 years for White  
234 people and 58.7 years for Asian people and people from minority ethnic  
235 groups.

236 According to the [18<sup>th</sup> annual report by the UK Renal Registry \(2015\)](#), on 31  
237 December 2014 there were 27,804 adults in the UK receiving dialysis. Of  
238 these, 86.9% had haemodialysis (44.0% in satellite units, 38.6% in hospitals,  
239 4.3% at home), 5.8% had continuous ambulatory peritoneal dialysis and 7.0%  
240 had automated peritoneal dialysis. In addition, 190 children and young people  
241 under the age of 18 years were on dialysis (103 haemodialysis and 87  
242 peritoneal dialysis). Reported 1- and 2- year survival rates for adult dialysis  
243 patients were 85.0% and 72.1%, respectively.

244 Approximately 5,500 adults and children are currently on the renal transplant  
245 waiting list ([NHS Blood and Transplant](#)), with about 3,000 renal transplants  
246 performed each year. The median time to transplantation for those on the  
247 national transplant list is around 1,000 days for adults and 300 days for  
248 children.

249 Some people with advanced CKD choose not to receive RRT and instead are  
250 treated conservatively, which will include management of anaemia and dietary  
251 modification as necessary.

252 RRT is an expensive treatment. The total cost of CKD in England in 2009-10  
253 was estimated at £1.45 billion. Even though only 2% of people with CKD  
254 receive RRT, more than half of this sum was spent on RRT.

255 This guideline aims to improve the care of people who need RRT or  
256 conservative care.

257

### 258 **3.2 Current practice**

259 Most people who have RRT are treated with haemodialysis. Within 90 days of  
260 starting RRT 66.3% of people are on haemodialysis, 19.1% are on peritoneal  
261 dialysis, 9.7% have a functioning transplant and 4.8% have died or stopped  
262 treatment.

263 Access to transplantation demonstrates considerable inequality across racial  
264 groups. There are relatively fewer numbers of black, Asian and minority ethnic  
265 groups on the organ donor list. These populations, however, have a higher  
266 incidence and prevalence of CKD needing RRT and they tend to reach this  
267 stage at a younger age.

268 The number of people receiving conservative treatment varies between renal  
269 units and has been difficult to establish, but up to 40% of patients aged over  
270 70 choose this treatment option. Most of these people still receive their care  
271 and treatment through renal services.

## 272 **4 Further information**

This is the draft scope for consultation with registered stakeholders. The consultation dates are 3 August to 7 September 2016.

The guideline is expected to be published in October 2018.

You can follow progress of the [guideline](#).

Our website has information about how [NICE guidelines](#) are developed.

273
