

# Characteristics Table for The Clinical Question: In the treatment of generalised anxiety disorder what treatment dose improves outcome?

6/18/2010 12:47:20

## Comparisons Included in this Clinical Question

<b>Anticonvulsants versus Anticonvulsants</b>
FELTNER2003 MONTGOMERY2006 PANDE2003 POHL2005 RICKELS2005

<b>Duloxetine (SNRI) vs Duloxetine (SNRI)</b>
KOPONEN2007 NICOLINI2009

<b>SSRIs versus SSRIs</b>
BALDWIN2006 RICKELS2003

<b>Venlafaxine (SNRI) vs Venlafaxine (SNRI)</b>
ALLGULANDER2001 DAVIDSON1999 HACKETT2003 RICKELS2000A

## Characteristics of Included Studies

Methods	Participants	Outcomes	Interventions	Notes
<p><b>ALLGULANDER2001</b></p> <p>Study Type: RCT</p> <p>Study Description: ITT: all eligible participants with at least one efficacy evaluation made whilst receiving study medication</p> <p>Type of Analysis: ITT/LOCF</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 168</p> <p>Setting: Belgium, Finland, France, Sweden, UK Outpatient (14 centres)</p> <p>Notes: RANDOMISATION: not reported. ALLOCATION CONCEALMENT: not addressed</p> <p>Info on Screening Process: 541 randomised, 529 met ITT criteria for inclusion.</p>	<p>n= 529</p> <p>Age: Mean 45 Range 18-86</p> <p>Sex: 201 males 328 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV</p> <p>Exclusions: - DSM-IV diagnosis of GAD - HAMA score &lt; 20 - HAMA (anxious mood &amp; tension items) &lt; 2 - MDD or other psychiatric disorder - Clinically important medical disease - Non-pharmacological drugs with psychotropic effects</p> <p>Notes: 74% had received prior treatment for anxiety (mostly benzodiazepines &amp; antidepressants); 85% received non-anxiolytic concomitant therapy during the study (26 had beta-blocker, 52 on zolpidem or chloral hydrate)</p> <p>Baseline: HAMA baseline depression score (approx): 26.48 (range 20 to 52). No significant differences between groups at baseline. Venlafaxine 37.5mg/d: 26.6 (range 20 to 44). Venlafaxine 75mg/d: 26.3 (range 20 to 43). Venlafaxine 150mg/d: 26.3 (17 to 38). Placebo: 26.7 (20 to 52).</p>	<p><b>Data Used</b></p> <p>HAMA</p> <p>Leaving the study due to inefficacy</p> <p>Leaving the study due to adverse events</p> <p>Leaving the study early for any reason</p> <p><b>Data Not Used</b></p> <p>Response (50% reduction in HAMA score) - not extractable</p> <p>Notes: TAKEN AT: 1,2,3,4,6,8,10,12,16,20,24,25 weeks. Efficacy looked at 8 &amp; 24 weeks. DROP OUTS: 36% CHANGE SCORES USED.</p>	<p><b>Group 1 N= 137</b></p> <p>Venlafaxine (extended release). Mean dose 150mg/d - Single blind wash-out period &amp; discontinuation period. 24 week treatment. Fixed doses. Once daily.</p> <p><b>Group 2 N= 134</b></p> <p>Venlafaxine (extended release). Mean dose 75mg/d - Single blind wash-out period &amp; discontinuation period. 24 week treatment. Fixed doses. Once daily.</p> <p><b>Group 3 N= 130</b></p> <p>Placebo - No further information</p> <p><b>Group 4 N= 138</b></p> <p>Venlafaxine (extended release). Mean dose 37.85mg/d - Single blind wash-out period &amp; discontinuation period. 24 week treatment. Fixed doses. Once daily.</p>	<p>Funding: Wyeth-Ayerst Research. Quality assessed: +.</p>
<p><b>BALDWIN2006</b></p> <p>Study Type: RCT</p> <p>Study Description: ITT: patients who took at least one dose of the study medication &amp; at least one baseline efficacy assessment were included in analysis</p> <p>Type of Analysis: LOCF/ITT</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 84</p> <p>Setting: UK</p> <p>Notes: RANDOMISATION: computer-generated randomisation list. ALLOCATION CONCEALMENT: sealed opaque envelopes.</p> <p>Info on Screening Process: Details not provided.</p>	<p>n= 682</p> <p>Age: Mean 41</p> <p>Sex: 244 males 438 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV-TR</p> <p>Exclusions: - not primary diagnosis of GAD (DSM-IV-TR) - not between 18 and 65 - HAMA score &lt; 20 - HAMA (anxious mood &amp; tension items) &lt; 2 - MADRS &gt;15 - Diagnosis of: MDD, panic disorder, social anxiety, PTSD, bipolar, OCD, body dysmorphic disorder, substance abuse, personality disorder - suicide risk - receiving psychosocial interventions (i.e. CBT, ECT) - physical health problems (i.e. vascular)</p>	<p><b>Data Used</b></p> <p>HAMA</p> <p>Leaving the study due to inefficacy</p> <p>Leaving the study due to adverse events</p> <p>Leaving the study early for any reason</p> <p>DESS (modified)</p> <p>Response (50% reduction in HAMA score)</p> <p><b>Data Not Used</b></p> <p>Remission (less than 7 on HAMA) - not extractable</p> <p>Notes: TAKEN AT: 1,2,4,6,8,10,12,13,14 weeks. DROP OUTS: 14% (98) MEAN CHANGE SCORES.</p>	<p><b>Group 1 N= 133</b></p> <p>Escitalopram. Mean dose 20 mg/ day - 1 week, single blind placebo lead-in period, 12 weeks of treatment with fixed doses. 2 week placebo wash-out period.</p> <p><b>Group 2 N= 134</b></p> <p>Escitalopram. Mean dose 5 mg/ day - 1 week, single blind placebo lead-in period, 12 weeks of treatment with fixed doses. 2 week placebo wash-out period.</p> <p><b>Group 3 N= 140</b></p> <p>Paroxetine. Mean dose 20 mg/ day - 1 week, single blind placebo lead-in period, 12 weeks of treatment with fixed doses. 2 week placebo wash-out period.</p>	<p>Received support from Lundbeck and sponsored by GlaxoSmith Kline. Quality assessed: +.</p>

	<p>- concomitant medication (i.e. psychoactive substances, antidepressants, benzodiazepines, antipsychotics)</p> <p>Baseline: HAMA scores at baseline (approx): 27.04 (4.46); No significant differences at baseline</p>		<p><b>Group 4 N= 136</b></p> <p>Escitalopram. Mean dose 10 mg/ day - 1 week, single blind placebo lead-in period, 12 weeks of treatment with fixed doses. 2 week placebo wash-out period.</p> <p><b>Group 5 N= 139</b></p> <p>Placebo - Identical appearance, taste and smell. Oral administration.</p>	
<p><b>DAVIDSON1999</b></p> <p>Study Type: RCT</p> <p>Study Description: ITT: all eligible participants with at least one efficacy evaluation made whilst receiving study medication</p> <p>Type of Analysis: ITT/LOCF</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 56</p> <p>Setting: US Outpatient (17 centres)</p> <p>Notes: RANDOMISATION: details not provided. ALLOCATION CONCEALMENT: not addressed.</p> <p>Info on Screening Process: 405 patients completed placebo run-in period &amp; received study drug, 36 had no primary efficacy evaluations &amp; 4 randomised at one site were excluded for administrative reasons.</p>	<p>n= 365</p> <p>Age: Mean 38</p> <p>Sex: 224 males 141 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV</p> <p>Exclusions: - Not 18 years or older - Primary diagnosis not GAD (DSM-IV) - HAMA score &lt; 18 - HAMA (anxious mood &amp; tension items) &lt; 2 - Raskin depression score &gt; 9 or &gt; Covi anxiety score or any item &gt; 3 - Presence of clinically significant psychiatric disorder other than GAD - use of other pharmacology except for chloral hydrate</p> <p>Notes: No. of participants taking chloral hydrate: placebo (N=7), venlafaxine 75mg/d (N = 2), venlafaxine, 150mg/d, buspirone (N=2)</p> <p>Baseline: HAMA scores at baseline (approx) total: 23.55 (4.23); venlafaxine 75mg/ day: 23.7 (4.1), 150 mg/d: 23.0 (4.0); buspirone: 23.8 (4.6); placebo; 23.7 (4.2). No significant differences at baseline.</p>	<p><b>Data Used</b></p> <p>HAMA</p> <p>Leaving the study due to adverse events</p> <p>Compliance</p> <p>Response (50% reduction in HAMA score)</p> <p>Notes: TAKEN AT: 1, 2, 3, 4, 6, 8 weeks &amp; 4 to 10 days after drug taper. DROP OUTS: 27%. MEAN CHANGE SCORES.</p>	<p><b>Group 1 N= 102</b></p> <p>Venlafaxine (extended release). Mean dose 75mg/ day - 1 week placebo run-in phase; 8 weeks of treatment. Fixed dose of 75mg/d.</p> <p><b>Group 2 N= 104</b></p> <p>Placebo - Matched placebo.</p> <p><b>Group 3 N= 98</b></p> <p>Buspirone. Mean dose 30 mg/ day - 1 week placebo run-in phase; 8 weeks of treatment. Fixed doses. Daily 3 divided doses. Days 1 &amp; 2: 15 mg/d. Days 3 &amp; 4: 20 mg/d. Days 5-7: 25mg/d. Days 8-56: 30 mg/d.</p> <p><b>Group 4 N= 101</b></p> <p>Venlafaxine (extended release). Mean dose 150 mg/ day - 1 week placebo run-in phase; 8 weeks of treatment. Fixed doses. Week 1: 75mg/d. Week 2: 150 mg/d.</p>	<p>Funding: Wyeth-Ayerst Research. Quality assessed: +.</p>
<p><b>FELTNER2003</b></p> <p>Study Type: RCT</p> <p>Study Description: ITT included all randomised participants who received at least one dose of study medication</p> <p>Type of Analysis: ITT</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 28</p> <p>Setting: Four study centres, USA Outpatients</p> <p>Notes: RANDOMISATION: procedure not reported</p> <p>Info on Screening Process: Not reported</p>	<p>n= 271</p> <p>Age: Mean 38 Range 18-74</p> <p>Sex: 128 males 143 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV</p> <p>Exclusions: - Did not meet DSM-IV criteria for GAD, or GAD not the primary diagnosis in the case of comorbidity and HAMA &gt;20 - Aged &lt;18 years - Suffering from another Axis I disorder except dysthymia, simple phobia, social phobia, somatization disorder or a history of MDD - Current MDD - Severe personality disorders, drug or alcohol abuse / dependence (active within 6 months of study) - Suicide risk - Covi anxiety scale &lt;9 Raskin depression &gt; 7</p> <p>Notes: Participants with a dual comorbid psychiatric disorders were required to have GAD as a primary disorder as judged by the psychiatrist, considering relative severity and time of onset</p> <p>Baseline: HAMA: Pregabalin (50mg) 24.9(3.9), Pregabalin</p>	<p><b>Data Used</b></p> <p>Remission (less than 7 on HAMA)</p> <p>CGI-I</p> <p>HAMA</p> <p>Adverse events</p> <p>Serious Adverse events</p> <p>Leaving the study due to adverse events</p> <p>Leaving the study early for any reason</p> <p>Response (50% reduction in HAMA score)</p> <p>Notes: TAKEN AT: Baseline and end of active treatment (4 weeks) DROPOUTS: total drop outs not reported</p>	<p><b>Group 1 N= 68</b></p> <p>Lorazepam. Mean dose 6MG - Fixed dose regimen with 2 mg TID. Study medication was titrated during days 1-6 of double-blind treatment.</p> <p><b>Group 2 N= 70</b></p> <p>Pregabalin. Mean dose 150mg - Fixed dose regimen with 50 mg TID. Study medication was titrated during days 1-6 of double-blind treatment.</p> <p><b>Group 3 N= 66</b></p> <p>Pregabalin. Mean dose 600mg - Fixed dose regimen with 200 mg TID. Study medication was titrated during days 1-6 of double-blind treatment.</p> <p><b>Group 4 N= 67</b></p> <p>Placebo</p>	<p>The ITT population was 271, this included all randomised participants who received at least one dose of study medication. No details given on the original number randomised to each condition. Funding: no details. Quality assessment score = +</p>

	(200mg) 25.4(4.6), Lorazepam 24.7(3.7), Placebo 24.8(4.1)			
<b>HACKETT2003</b>				
<p>Study Type: RCT</p> <p>Study Description: Randomised, double-blind, placebo-controlled, parallel-group study. Followed by long-term phase study that is reported separately.</p> <p>Type of Analysis: ITT (LOCF method)</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 56</p> <p>Setting: Outpatients. Multicentre: France.</p> <p>Notes: RANDOMISATION: no further details</p> <p>Info on Screening Process: 564 entered study, 16 did not receive any medication before dropping out</p>	<p>n= 540</p> <p>Age: Mean 44</p> <p>Sex: 175 males 365 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV</p> <p>Exclusions: - &lt;18 years of age - HAM-A &lt;20 - HAMA &lt;2 for items 1 and 2 - MDD - more than 2 panic attacks in last month</p> <p>Baseline: HAM-A: Placebo =27.6 Venlafaxine 75mg = 27.9 Venlafaxine 150mg = 27.9 Diazepam = 28.4. Doesn't report SDs or SEs.</p>	<p><b>Data Used</b></p> <p>CGI-I HAMA</p> <p>Leaving the study due to adverse events</p> <p>Leaving the study early for any reason</p> <p>Response (50% reduction in HAMA score)</p> <p>Notes: Rating scales were administered at baseline, and again after 7, 14, 21, 28, 42 and 56 days.</p>	<p><b>Group 1 N= 179</b></p> <p>Venlafaxine (extended release). Mean dose 150mg - 150mg/day.</p> <p><b>Group 2 N= 191</b></p> <p>Venlafaxine (extended release). Mean dose 75mg - 75mg/day.</p> <p><b>Group 3 N= 97</b></p> <p>Placebo - No details given.</p> <p><b>Group 4 N= 89</b></p> <p>Diazepam. Mean dose 15mg/d - 15 mg/day.</p>	<p>Funded by Wyeth. Quality assessed +.</p>
<b>KOPONEN2007</b>				
<p>Study Type: RCT</p> <p>Study Description: ITT analysis included all randomised participants with &gt;=1 postbaseline analysis. Safety analysis included all randomised participants</p> <p>Type of Analysis: ITT</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 63</p> <p>Setting: outpatient clinics. Multicentre - 7 countries</p> <p>Notes: RANDOMISATION: procedure not reported. Participants were stratified by baseline HAM-A score.</p> <p>Info on Screening Process: 639 participants were screened for the study with 126 failing to meet the inclusion criteria.</p>	<p>n= 513</p> <p>Age: Mean 44</p> <p>Sex: 165 males 348 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV</p> <p>Exclusions: -&lt;18 years - No primary DSM-IV diagnosis of GAD - CGI-S &lt;4 - HADS anxiety subscale &lt;10 - Covia Anxiety score &lt;9 or not greater and then Raskin depression total score. Raskin depression scale item rated &gt;3 - Medical illness that would contraindicate use of duloxetine - Women of childbearing age not using adequate contraception - recent diagnosis of depression or substance abuse/dependence - past year history of panic disorder, PTSD or eating disorder - lifetime history of psychotic, bipolar, OCD or psychosis - lack of response of GAD to 2 prior adequate trials of antidepressants or benzodiazepine treatments - psychotherapy initiated 6 weeks prior to study enrollment</p> <p>Baseline: HAMA (total) Dulox (60mg) 25.0(7.1); Dulox (120mg) 25.2(7.3); Placebo 25.8(7.6)</p>	<p><b>Data Used</b></p> <p>Q-LES-Q-SF</p> <p>Response (50% reduction in HAMA score)</p> <p>Remission (less than 7 on HAMA)</p> <p>Leaving the study early for any reason</p> <p>PGI-I</p> <p>Leaving the study due to adverse events</p> <p>Significant improvement (30% reduction)</p> <p>EQ-5D</p> <p>CGI-I</p> <p>Symptom Questionnaire-Somatic subscale (SQ-SS)</p> <p>Leaving the study due to inefficacy</p> <p>Serious Adverse events</p> <p>Sheehan Disability Scale (SDS)</p> <p>Visual Analog Scale (VAS)</p> <p>HAMA</p> <p>Discontinuation adverse events (DAEs)</p> <p>Notes: TAKEN AT: baseline and endpoint DROP OUT: Dul 60 33/168 (19.6%); Dul 120 46/170 (27.1%); Placebo 45/175 (25.7%)</p>	<p><b>Group 1 N= 175</b></p> <p>Placebo</p> <p><b>Group 2 N= 168</b></p> <p>Duloxetine. Mean dose 60mg/d - Participants were started with 60mg/d, if there were tolerability concerns this was lowered to 30mg/d with all participants gradually increased to their randomised dose within the first 2 study weeks.</p> <p><b>Group 3 N= 170</b></p> <p>Duloxetine. Mean dose 120mg/d - Participants were started with 60mg/d, if there were tolerability concerns this was lowered to 30mg/d with all participants gradually increased to their randomised dose within the first 2 study weeks.</p>	<p>Drug company funded - Eli Lilly studyF1J-MC-HMBR (NCT00122824) - trial report collected</p> <p>All participants underwent a single-blind placebo lead-in week, 9 week acute phase and a 2 week discontinuation tapering phase. Quality assessment score = + / ++</p>
<b>MONTGOMERY2006</b>				
<p>Study Type: RCT</p> <p>Study Description: ITT: all randomized patients who received at least 1 dose of study drug. LOCF used on all primary and secondary outcome measures.</p> <p>Type of Analysis: ITT</p> <p>Blindness: Double blind</p> <p>Duration (days): Mean 42</p> <p>Followup: None</p>	<p>n= 421</p> <p>Age: Mean 44</p> <p>Sex: 160 males 261 females</p> <p>Diagnosis: 100% Generalised Anxiety Disorder (GAD) by DSM-IV</p> <p>Exclusions: Diagnosis of any other current Axis 1 disorders except depression not otherwise specified, dysthymia, simple phobia or somatisation disorder. Additional exclusion</p>	<p><b>Data Used</b></p> <p>Remission (less than 7 on HAMA)</p> <p>CGI-I HAMA</p> <p>Adverse events</p> <p>Serious Adverse events</p> <p>Leaving the study early for any reason</p> <p>Response (50% reduction in HAMA score)</p> <p><b>Data Not Used</b></p>	<p><b>Group 1 N= 97</b></p> <p>Pregabalin. Mean dose 400mg/day - 100mg/day for 2 days then 200mg/day for 2 days, before receiving the full dosage of 400mg/day on day 5. All administered twice-per-day (b.i.d.).</p> <p><b>Group 2 N= 113</b></p> <p>Venlafaxine (extended release). Mean dose 37.5mg/day - Began treatment at full 37.5mg/day (b.i.d.) dosage.</p>	<p>Funded by pharma (Pfizer Inc, New York). This study involved a 1 week screening period. 6 weeks of double-blind treatment were followed up by a 1-week, double-blind taper and follow-up phase. Quality assessment score = +</p>

<p>Setting: Multicentre (76): Austria, Belgium, Germany, the Netherlands and the United Kingdom. Outpatients attending primary care or psychiatric practices.</p> <p>Notes: Randomisation procedure not reported. Parallel-group design.</p> <p>Info on Screening Process: 543 ppts entered baseline phase; 421 were randomised and received study medication. Reasons for exclusion: did not meet entry criteria, lost to follow-up, withdrew consent, other/administrative and randomised but did not take study medication.</p>	<p>criteria: clinically relevant hematologic, autoimmune, endocrine, cardiovascular, renal, hepatic, gastrointestinal, or neurologic disorders; a history of seizure disorder; borderline, avoidant or antisocial personality disorder; alcohol or substance use disorder within the past 6 months; and patients considered at risk of suicide. Women who were pregnant or lactating, and women of childbearing potential who were not using a reliable method of contraception. Use of gabapentin or a benzodiazepine within 1 week of first baseline visit, the use of other psychotropic medications within 2 weeks prior to study entry, or ongoing psychodynamic or cognitive-behavioural psychotherapy for GAD. Use of corticosteroids (except topical or inhaled corticosteroids &lt; 1000mg/day), antihypertensive agents, captopril, beta-blockers and psychotropic medication was not permitted during the study. Patients were allowed to take zolpidem for insomnia but not for more than 2 nights per week or the night before clinic visits.</p> <p>Notes: Ppts were diagnosed using the Mini-International Neuropsychiatric Interview (MINI).</p> <p>Baseline: Pregabalin 400mg/day (N=97, 23%), Pregabalin 600mg/day (N=110, 26%), Venlafaxine (N=113, 27%) and Placebo (N=101, 24%). HAM-A baseline: Pregabalin 400mg/day 26.3 (4.4), Pregabalin 600mg/day 26.5 (4.6), Venlafaxine 26.0 (4.6) and Placebo 27.4 (5.5). TOTAL: 26.6 (4.8). HAM-D baseline: Pregabalin 400mg/day 12.2 (3.6), Pregabalin 600mg/day 12.2 (4.0), Venlafaxine 12.0 (3.4) and Placebo 12.8 (4.9). TOTAL: 12.3 (4.0).</p>	<p>Leaving the study due to adverse events - not extractable</p> <p>Significant improvement (30% reduction) - not required</p> <p>Notes: HAM-D outcome scores also reported. TAKEN AT: baseline, 1 week and endpoint. DROP OUTS: Pregabalin 400mg/day 16/97, Pregabalin 800mg/day 29/110, Venlafaxine 34/113 and Placebo 20/101.</p>	<p><b>Group 3 N= 101</b></p> <p>Placebo - No details given.</p> <p><b>Group 4 N= 110</b></p> <p>Pregabalin. Mean dose 600mg/day - 150mg/day for 2 days, 300mg/day for 2 days and 450mg/day for 2 days before receiving the full dosage of 600mg/day after day 7. All administered twice-per-day (b.i.d.).</p>
