

1 Appendix D: Evidence Tables – A, F, J, T, Y, EE, FF and GG

Please note that there are no evidence tables for these review questions for the following reasons:

- RQ A is a position statement referring to Public Health England's Standards for Microbiology Investigations
- RQ F is a position paper, which appears in full in the main guideline
- RQ J is not an evidence review as such, but a review of the summary of product characteristics for the main TB drugs; this appears in full in the main guideline
- RQ T was covered solely by the new HTA, of which the economic modelling was the most significant part used for the recs.
- RQ Y is a position paper; this appears in full in the main guideline.
- RQ's EE, FF and GG is the work conducted by Warwick Evidence. The full review and economic modelling appear in appendix H
