**Equality impact assessment – Scoping**

**Treatments for non-small-cell lung cancer [ID6234]**

The impact on equality has been assessed during this evaluation according to the principles of the NICE Equality scheme.

1. Have any potential equality issues been identified during the scoping process (draft scope consultation and scoping workshop discussion), and, if so, what are they?

One consultation comment response identified that certain genetic alterations are more prevalent in some ethnic groups than others.

2. What is the preliminary view as to what extent these potential equality issues need addressing by the Committee?

Differences in prevalence or incidence of a disease cannot typically be addressed in a technology appraisal. But the committee takes into account whether its recommendations could have a different impact on people protected by the equality legislation than on the wider population.

3. Has any change to the draft scope been agreed to highlight potential equality issues?

No

4. Have any additional stakeholders related to potential equality issues been identified during the scoping process, and, if so, have changes to the stakeholder list been made?

No
