Subject: RE: Health Technology Appraisal: Drugs for the treatment of pulmonary arterial hypertension

Dear Dr Boysen

Please find two attached documents in response your letter of 9th of November 2007.

Both are confidential . Document on patient with Connective Tissue Disease is the manuscript submitted to the peer review journal and we as a group are awaiting comments from the rewrites. The second, on patients with Idiopathic Pulmonary Arterial Hypertension was prepared in response to your call for survival data in this group of patients. You have to appreciate some limitation in the interpretation of the data.

If you have any question and comments do not hesitate and contact me.

I am also very grateful to Emma Pugh for agreeing to extend dead line for submission of the data .

Kind regards

On behalf of National Pulmonary Hypertension Centres and Ireland
