NICE has said that the ProKnow cloud-based system can be used in the NHS for radiotherapy data storage, communication and management. It can be used in the NHS while more information about ProKnow is collected.

ProKnow is a cloud-based system that is used by healthcare professionals for people having planned radiotherapy. It includes communication tools, analytics software and a database for importing, analysing and safely storing patient data.

The NHS is collecting evidence about how ProKnow is used and how well it works. You might be asked if details of your radiotherapy treatment can be collected as evidence. You can ask your healthcare professional for more information about how your information will be stored and used.
