

## IPG268 Brachytherapy as the sole method of adjuvant radiotherapy for breast cancer after local excision

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

### Procedure and device:

#### SNOMED CT preferred term (concept ID)

Brachytherapy of breast (447759004)

Excisional biopsy of breast mass (42125001)

#### OPCS-4 code(s):

**X65.3 Delivery of a fraction of interstitial radiotherapy**

**Y35.4 Introduction of radioactive substance into organ for brachytherapy NOC**

**Y89.- Brachytherapy (where necessary)**

**Y53.- Approach to organ under image control or Y68.- Other approach to organ under image control (if used)**

**Z15.- Breast**

**Z94.- Laterality of operation**

**Note:** Codes in category **Y53 Approach to organ under image control** and **Y68 Other approach to organ under image control** are used as additional codes for any procedure that uses image control that may or may not be performed via percutaneous approach.

When a procedure has been performed using image control and the code that classifies the procedure **does not** state the type of image control used, then a code from these categories **must be** assigned. If the specific method of image control is not stated, the fourth-character **.9** must be assigned.

### Diagnosis or health condition:

#### SNOMED CT preferred term (concept ID)

Malignant tumor of breast (254837009)

**ICD-10 code(s):****C50.- Malignant neoplasm of breast****Clinical coding recommendations for NICE guidance**

For each published interventional procedure and medical technologies guidance, we work with NHS Digital to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS Digital Information Representation Services work collaboratively to ensure the most appropriate SNOMED CT, OPCS-4 and ICD codes are provided.

NHS Digital is the national release centre for the UK edition of SNOMED CT, ICD and OPCS-4. Further SNOMED CT information including licensing, see [here](#). Further Classifications information, see [here](#).
