IPG317 – Individually magnetic resonance imaging-designed unicompartmental interpositional implant insertion for osteoarthritis of the knee

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure and device:

SNOMED CT preferred term (concept ID)

Unicompartmental interposition arthroplasty of knee with custom-made implant (865691000000106)

OPCS-4 code(s):

   Note: The OPCS-4 classification is used to classify interventions and surgical procedures carried out on the patient, it cannot identify how a type of implant is made.

Insertion of a unicompartmental interpositional implant:

W55.1 Primary prosthetic interposition arthroplasty of joint

Y53.4 Approach to organ under fluoroscopic control (if used)

W71.2 Open excision of intra-articular osteophyte (if performed)

Y76.7 Arthroscopic approach to joint (additionally assigned if osteophyte is removed arthroscopically)

Z84.5 Tibiofemoral joint

   Note: It is not possible to define whether the implant was inserted into the medial or lateral side of the tibiofemoral joint.

Diagnosis or health condition:

SNOMED CT preferred term (concept ID)

Osteoarthritis of knee (239873007)

Clinical coding recommendations for NICE guidance

For each published interventional procedure and medical technologies guidance, we work with NHS Digital to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

The UK Edition of SNOMED CT is managed by the Clinical Terminology Service of NHS Digital. For further information including licensing, see UK Terminology Centre — NHS Digital.

The Clinical Classifications Service of NHS Digital is the central definitive source for clinical coding guidance and determines the coding standards associated with the classifications (OPCS-4 and ICD-10) to be used across the NHS. The Clinical Classifications Service and NICE work collaboratively to ensure the most appropriate classification codes are provided. Clinical Classifications Service — NHS Digital.
