

## IP1758 Intravascular lithotripsy for calcified coronary arteries during percutaneous coronary intervention

SNOMED CT provides clinical terms for entry into the patient record to record clinical information relevant to that encounter; the mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

### **Procedure and device:**

#### **SNOMED CT preferred term (concept ID)**

A request for a new SNOMED CT code has been submitted for the next release. SNOMED CT Submission Portal request reference number 29485.

#### **OPCS-4 code(s):**

The following code would be assigned in *secondary position* to the code(s) for the percutaneous coronary intervention.

**Y17.3 Lithotripsy of lesion of organ NOC**

### **Diagnosis or health condition:**

#### **SNOMED CT preferred term (concept ID)**

Calcification of coronary artery (445512009)

#### **ICD-10 code(s):**

**I25.1 Atherosclerotic heart disease**

## **Clinical coding recommendations for NICE guidance**

For each published interventional procedure and medical technologies guidance, we work with NHS Digital to provide relevant clinical coding information.

SNOMED CT provides clinical terms for entry into the patient record to store clinical information relevant to that encounter.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

The UK Edition of SNOMED CT is managed by the Clinical Terminology Service of NHS Digital. For further information including licensing, see [here](#).

The Clinical Classifications Service of NHS Digital is the central definitive source for clinical coding guidance and determines the coding standards associated with the classifications (OPCS-4 and ICD-10) to be used across the NHS. The Clinical Classifications Service and NICE work collaboratively to ensure the most appropriate classification codes are provided. [Clinical Classifications Service — NHS Digital](#).
