

IPG75 - Balloon angioplasty of pulmonary vein stenosis in infants

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure:

OPCS-4 code(s):

With stenting

L80.4 Percutaneous transluminal insertion of stent into pulmonary vein

Note: A supplementary code from **L76.- Endovascular placement of stent** or **L89.- Other endovascular placement of stent** would be added to identify the type and number of stents. Please note that the **.8** and **.9** codes from extended category **L89.-** must not be used.

Y53.- Approach to organ under image control

Or

Y68.- Other approach to organ under image control

Without stenting

L80.2 Percutaneous transluminal balloon angioplasty of pulmonary vein

Y53.- Approach to organ under image control

Or

Y68.- Other approach to organ under image control

Or

L80.3 Percutaneous transluminal cutting balloon angioplasty of pulmonary vein

Y53.- Approach to organ under image control

Or

Y68.- Other approach to organ under image control

Note: Current coding rules state that when angioplasty and stent procedures are performed concurrently, and individual codes are available for the angioplasty and stent, only the code for the stent insertion is required; the angioplasty is implicit within the code for stent insertion.

Note: Codes in category **Y53 Approach to organ under image control** and **Y68 Other approach to organ under image control** are used as additional codes for any procedure that uses image control that may or may not be

performed via percutaneous approach.

Note: When a procedure has been performed using image control and the code that classifies the procedure **does not** state the type of image control used, then a code from these categories **must be** assigned. If the specific method of image control is not stated, the fourth-character **.9** must be assigned.

Diagnosis or health condition:

ICD-10 code(s):

Q26.8 Other congenital malformations of great veins

Or

I28.8 Other specified diseases of pulmonary vessels

Clinical coding recommendations for NICE guidance

For each published interventional procedure guidance, we work with NHS England to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS England Terminology and Classifications Delivery Service work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS England is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
