

IP1020/2 - Irreversible electroporation for prostate cancer

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

Procedure:

OPCS-4 code(s):

M70.8 Other specified other operations on outlet of male bladder

Y12.3 Electrochemotherapy to lesion of organ NOC

Includes: Electroporation to lesion of organ NOC

Plus

Y53.- Approach to organ under image control

Or

Y68.- Other approach to organ under image control

Note: The codes in categories **Y53 Approach to organ under image control** and **Y68 Other approach to organ under image control** are supplementary codes, used to identify where a procedure has been performed using image control. These codes include, but are not limited to, where image control is used for a procedure performed via a percutaneous approach. It is possible for multiple procedures from these categories to be assigned where multiple different imaging techniques are used together.

Diagnosis or health condition:

ICD-10 code(s):

C61.X Malignant neoplasm of prostate

Clinical coding recommendations for NICE guidance

For each published interventional procedure guidance, we work with NHS Digital to provide relevant clinical coding information.

The mandated classifications (OPCS-4 or ICD-10) provide a method to collect and aggregate data to allow accurate and consistent data analysis.

NICE and NHS Digital Information Representation Services work collaboratively to ensure the most appropriate OPCS-4 and ICD-10 codes are provided.

NHS Digital is the national release centre for the UK edition of ICD-10 and OPCS-4. Further Classifications information, see [here](#).
