## INTERVENTIONAL PROCEDURES PROGRAMME

### Equality impact assessment

#### IPG770 Transurethral water-jet ablation for lower urinary tract symptoms caused by benign prostatic hyperplasia

The impact on equality has been assessed during guidance development according to the principles of the NICE Equality scheme.

#### Briefing

1. Have any potential equality issues been identified during the briefing process (development of the brief or discussion at the committee meeting), and, if so, what are they?

Sex: Benign prostatic hyperplasia (BPH) only affects people with a prostate.

Age: The incidence of BPH increases with age.

Disability: People with BPH may be covered by the Equality Act if their condition has had a substantial adverse impact on normal day to day activities for over 12 months or is likely to do so.

Ethnicity: Lower urinary tract symptoms secondary to BPH are more prevalent in men of African origin than in men of white or Asian origin.

2. What is the preliminary view as to what extent these potential equality issues need addressing by the committee? (If there are exclusions listed in the brief (for example, populations, treatments or settings), are these justified?)

This was not thought to have an impact on the assessment of the procedure. No exclusions were applied.
