

Economic Plan

This document identifies the areas prioritised for economic modelling. The final analysis may differ from those described below. The rationale for any differences will be explained in the guideline.

1 Guideline

Full title of guideline: Gastro-oesophageal reflux disease: recognition, diagnosis and management in children and young people (Gastro-oesophageal reflux disease in children and young people)

2 List of Modelling Questions

Clinical questions by scope area	The cost-effectiveness of medical and surgical strategies for the management of GORD
Population	Children and young people with overt regurgitation (GOR or GORD) that have not responded to changes in feeds or feed enhancers
Interventions considered for inclusion	Medical management Fundoplication
Type of analysis	CUA if appropriate data can be identified
