

Economic plan

This plan identifies the areas prioritised for economic modelling. The final analysis may differ from those described below. The rationale for any differences will be explained in the guideline.

1 Guideline

RRT, transplant and conservative management

2 List of modelling questions

Review question	<p>What is the clinical and cost effectiveness of different modalities of renal replacement therapies and conservative management for people who have progressed to later stages of CKD?</p> <ul style="list-style-type: none"> • Haemodiafiltration versus haemodialysis
Population	Adults with CKD starting RRT, naïve to RRT and choosing dialysis via vascular access
Interventions and comparators considered for inclusion	<ul style="list-style-type: none"> • Haemodiafiltration • High flux haemodialysis
Perspective	Interventions with health outcomes in NHS setting (UK NHS and PSS costs)
Outcomes	Cost per QALY gained
Type of analysis	Cost–utility analysis (Markov model; lifetime horizon)
Issues to note
