No significant resource impact is anticipated

We do not expect this guideline to have a significant impact on resources; that is:

- the resource impact of implementing any single guideline recommendation in England will be less than £1 million per year (or £1,800 per 100,000 population) **and**
- the resource impact of implementing the whole guideline in England will be less than £5 million per year (or £9,000 per 100,000 population).

Most of the recommendations aim to re-enforce best practice and reduce clinical variation and the assessment is these will not have a significant impact.

Protection from light (recommendations 1.2.3 and 1.2.4), recommends the use of light-shielding syringes, lines and bags to protect lipids and amino acids from sunlight. This re-enforces the recommendation that is in the existing [MHRA safety guidance](#) sent to healthcare professionals and compounding centres in September 2019. Where centres are not currently following the existing MRHA guidance there may be a resource impact to bring practice in line with the guidance and the NICE guideline.

Neonatal services are commissioned by NHS England and clinical commissioning groups. Providers are NHS hospital trusts.
