

Evidence reviews 2020

Evidence review

Published: 18 November 2020

www.nice.org.uk

In 2020, we reviewed the evidence in the following areas and made recommendations (labelled [2020]):

- [Dual antiplatelet therapy](#)
- [Early invasive versus conservative management](#)
- [Antithrombin therapy](#)
- [Antithrombin therapy in adults with ST-segment elevation myocardial infarction intended for primary percutaneous coronary intervention](#)
- [Culprit vessel only compared to complete revascularisation](#)
- [Clinical and cost effectiveness of drug-eluting stents](#)
- [Antiplatelet therapy for people with an ongoing separate indication for anticoagulation](#)
- [Beta-blockers](#)
