### Oral health promotion approaches for dental health practitioners - Consultation on Draft Scope Stakeholder Comments Table

18 March - 15 April

*Comments forms with attachments such as research articles, letters or leaflets cannot be accepted. If comments forms do have attachments they will be returned without being read. If the stakeholder resubmits the form without attachments, it must be by the consultation deadline*

Stakeholder Organisation	Section Number	Page Number	Comments Please insert each new comment in a new row.	Response Please respond to each comment
British Dental Association	General		Overall the key questions cover all the relevant areas and should identify the literature needed to support the synthesis of the evidence and the writing of the guideline.	Thank you for your comment.
British Dental Association	2	1	Include the latest versions of DBOH and the revised versions of 'Smokefree and Smiling'.  The recent guidance on behavioural change should be made more prominent.	Thank you for your comment, we have amended the scope so it lists the latest version of 'Smokefree and smiling' and we await the publication of the third version of DBOH.  Thank you for your comment, the scope has been amended accordingly.
British Dental Association	4.3	7	Question 1: Consider the full range educational events in the widest possible range of settings.	Thank you for your comment; the questions in the scope are intended to be overarching and will be further refined when the protocol for the review of evidence is developed. We anticipate that the committee will explore the issues you raise when developing the guidance.
British Dental Association	4.3	7	Question 2: Evaluate the unique potential of dentists as the sole regular contact for a cohort of predominantly male healthy patients who are likely to	Thank you for your comment. Please see our response

				the review of evidence is developed.
British Dental Health Foundation	2d	2	British Dental Health Foundation strongly supports the proposals for Guidance for local authorities on oral health needs assessments and community oral health promotion programmes, and Guidance for carers working in health and social residential care settings (including nursing homes, residential care homes).	Noted, thank you.
British Dental Health Foundation	3	2 - 5	The wording around many of the statistics (tooth decay in children for example) implies only good news. They may have improved significantly over the last few decades but they remain appalling for a preventable disease.	Thank you for your comment, the scope has been amended accordingly.
British Dental Health Foundation	3	2 - 5	British Dental Health Foundation strongly supports the details given by NICE under the need for guidance.	Noted, thank you.
British Dental Health Foundation	3a	2	British Dental Health Foundation would like to add that in addition tooth decay being one of the most common dental problems in the UK; it is also one of the world's largest NCDs, particularly in children. Here, educating children, parents, care workers and teachers about diet and good daily oral hygiene routines play a pivotal role.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
British Dental Health Foundation	3b	2	Oral cancer is one of the UK's fastest growing cancers, increasing by 40% in the last decade. Guidance on risk factors and lifestyles (smoking, alcohol), along with the importance of dental visits for early detection is of significant value.	Thank you for your comment, the scope has been amended accordingly.
British Dental Health Foundation	3b	2	Regarding the increase of natural teeth found in the Adult Dental Survey 2009 when compared to 1978. The single most important factor in this development	Our understanding is that it is access to fluoride products,

				behaviour, including a positive patient experience of attendance at the dentist.' However, the guidance will consider whether oral health promotion messages are more likely to have an impact if they are linked with wider health outcomes, such as heart and lung disease or diabetes.
<b>Cheshire West and Chester Council</b>	4.3	7	In response to Q2: This would be a very helpful area in which to understand the supporting evidence. In some areas there is a drive to deliver the NHS Health Checks through dentists (as well as other providers). It would be useful to know if this is likely to be effective – are people who attend dentists likely to be within the eligible cohort and more receptive to accept a NHS Health Check (as a result of engaging with this aspect of health and social care provision?)	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
<b>Cheshire West and Chester Council</b>	4.3	7	Another issue not covered in these questions would be how to encourage people to access dentists. This scoping document is focusing on those already accessing dentistry – how do we encourage them to attend in the first place, sustain engagement (why do people stop attending dentists – do additional visits to the dental hygienist reduce people's motivation to attend?) Or will this be covered in the other documents?	We note that encouraging people to access dentists is an important issue, however, the scope for the guidance is restricted by the referral received from the department of Health: 'Guidance for dental health practitioners on effective approaches to promoting positive oral health

Stakeholder Organisation	Section Number	Page Number	Comments Please insert each new comment in a new row.	Response Please respond to each comment
GSK Consumer Healthcare	Question 1: What are the most effective and cost-effective approaches that dental health practitioners and their teams can use to convey oral health promotion messages?		We welcome the opportunity to comment on the draft scope. We would acknowledge that health promotion messages can and should be delivered by the whole of the dental team and should not just be limited to those who have clinical facing roles. For example, stop smoking advice and support can just as easily be delivered by members of the wider team such as practice managers and reception staff. Acknowledging that it is the joint responsibility of all team members ensures that oral health promotion messages are reinforced at every touch point a patient may have within the practice.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
GSK Consumer Healthcare			Having clear, consistent and agreed oral health messages within the practice is a key component of an effective approach.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
GSK Consumer Healthcare			Practices should also be able to ensure that their message and guidance on oral health can be fulfilled at the time it is delivered. If the recommendation is to use a particular oral health product, these should be available within the practice either to purchase, provided as a sample or available for prescription.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
GSK Consumer Healthcare	Question 2: Are oral health promotion		Whilst the data on oral systemic health are interesting and continuing to develop, a prevention message for those diseases may be too stretching given the current evidence base.	Thank you for your comment; we anticipate that the committee will explore these

	messages more likely to have an impact if they are linked with wider health outcomes, such as heart and lung disease or diabetes?		However, for those who have the disease, a message that links good oral hygiene to better management of their chronic condition could be engaging.	issues when developing the guidance.
<b>GSK Consumer Healthcare</b>	<b>Question 3:</b> What helps dental health teams to deliver oral health promotion messages?		Clear consistent evidence based guidance is essential. Whilst DBOH provides this in a number of key areas there are conditions and therapy areas that may not be covered.	We anticipate that the committee will explore these issues when developing the guidance and will develop evidence based guidance to help dental team to deliver oral health promotion messages to their patients. Just to note that the guidance will refer to the oral health promotion messages set out in the forthcoming 3 <sup>rd</sup> edition of <a href="#">Delivering better oral health: an evidence-based toolkit for prevention</a> . The guidance will not cover the evidence base underpinning positive oral health behaviours (to prevent tooth decay, gum disease and

				oral cancers) or clinical dental treatment.
<b>GSK Consumer Healthcare</b>	<b>Question 4:</b> What can help people to understand and act on oral health promotion messages?		Whilst patients receive information in a variety of ways in the digital environment, oral health messages still broadly rely on a leaflet and verbal endorsement. Ensuring that videos and apps are available supporting the guidance from the team in practice is critical to compliance, particularly for younger patients.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
<b>GSK Consumer Healthcare</b>	<b>Question 5:</b> How can a visit to the dentist be made into a more positive experience?		With the new prevention agenda, it is vital that all advice provided can be delivered within the practice. Removing 'hand-offs' to other providers and practitioners is key as is relying on patients fulfilling recommendations on their own initiatives.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
<b>Public Health England</b>	General	N/A	<p>PHE as a registered stakeholder organisation are pleased to be given the opportunity to comment on the draft scope. We welcome this short guidance to support dental teams in affecting behaviour change. This will be a helpful way to support teams in the implementation of Delivering Better Oral Health.</p> <p>However it should be acknowledged within the background of the scope that the document focuses on downstream interventions and the evidence suggests that the greatest impact on health comes from upstream interventions. Any guidance for the dental team should therefore contextualise these interventions and consider how the dental team can influence upstream approaches, (e.g. by acting as advocates for change nationally and engaging with community level approaches), as well as</p>	<p>Thank you for your comments.</p> <p>The scope for the guidance is restricted by the referral received from the department of Health: 'Guidance for dental health practitioners on effective approaches to promoting positive oral health</p>

### Oral health promotion approaches for dental health practitioners - Consultation on Draft Scope Stakeholder Comments Table

18 March - 15 April

*Comments forms with attachments such as research articles, letters or leaflets cannot be accepted. If comments forms do have attachments they will be returned without being read. If the stakeholder resubmits the form without attachments, it must be by the consultation deadline*

Stakeholder Organisation	Section Number	Page Number	Comments Please insert each new comment in a new row.	Response Please respond to each comment
			The last sentence in this section has a typographical error, a missing word.	Noted, this has now been corrected.
Public Health England	4.2.1.	5	<u>Approaches that will be covered</u> This guidance will provide useful support to dental teams who are not always clear on how to achieve behaviour change. There is a need to acknowledge the evidence base that shows that increasing knowledge is not enough to cause changes in behaviour.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
	4.2.1 (a)	6	We support the need for guidance in relation to verbal information. Particularly what makes motivational interviewing and brief interventions more and indeed less effective in the dental setting.	
Public Health England	4.2.1b	6	Whilst considering practical demonstrations consideration should be given to skill mix and surgery time constraints	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
	4.2.1c	6	Throughout England there is a plethora of oral health information in various formats it would be helpful to know what format is the most effective.	
	4.2.1d	6	It would be useful to include what media should be used, and in what way, to support the face to face interventions delivered by dental teams, e.g. apps,

			websites, SMS, twitter, Facebook etc. Dental teams and oral health promotion teams would benefit from knowing how best to utilise these methods to facilitate behaviour change.	
Public Health England	4.2.2b	6	Clinical dental treatment should be considered in conjunction with preventative modalities as the two are synergistic. A comprehensive review would add more useful detail to the overall programme	Clinical dental treatments are beyond the remit of this guidance.
Public Health England	4.2.2c	6	In clinical terms, it is often the anxious patients who have poor levels of oral health. Therefore, to exclude this area will detract from the overall programme.	The management of dental anxiety is beyond the remit of this guidance.
Public Health England	4.2.2e	6	Community based programmes are often run conjointly with clinical programmes in general dental practice. It would be very beneficial to identify how one impacts on the other. Therefore, the exclusion of the community based programmes may detract from the overall picture.	Community based programmes and clinical dental treatments are beyond the remit of this guidance.
Public Health England	4.2.2f	7	Unless oral health promotion in residential or care settings is to be covered in subsequent guidance PHE would support its inclusion in the scope, where that oral health promotion is being delivered by dental teams. This is a high need and vulnerable group and therefore a high priority for any behaviour change or preventive intervention.	Residential care settings care beyond the remit of this guidance; guidance is currently in development on oral health in nursing and residential care see: <a href="http://guidance.nice.org.uk/PHG/62">http://guidance.nice.org.uk/PHG/62</a>
Public Health England	4.3	7	<u>Key questions and outcomes</u>  Question 1: when measuring effectiveness and cost effectiveness what	Thank you for your comment; the questions in the scope are

Stakeholder Organisation	Section Number	Page Number	Comments Please insert each new comment in a new row.	Response Please respond to each comment
Public Health England	Question 2	7	The document should refer to Call To Action and relate back to evidence from this as the impact of oral diseases and prevention messages on general health is a key area of this consultation.	Noted, thank you. We will ensure that the team commissioned to undertake the review of evidence is made aware of this document.
Public Health England	Questions 3,4 and 5	7	Clarification is required as to the involvement of dental teams in this consultation as an accurate answer to these questions can only be gained by involving a significant cohort or sample size.	A review of evidence will be commissioned to look at both evidence of effectiveness and barriers and facilitators to effectiveness. The recommendations will be developed using a range of scientific evidence and other evidence – such as expert testimony, stakeholder and practitioner views, committee discussions and debate.
Public Health England	Questions 1-5	7	There is no reference in the document to the contract reform pilots that are currently taking place. These are piloting an entirely different way of working in general dental practice that is predicated on prevention. Therefore, experiences gained from these pilots are likely to be key to answering all of these questions.	Thank you for your comment; section 2 included a reference to 'NHS dental contract: proposal for pilots December 2010' (DH 2010) however, the scope has been amended and now makes further reference

			<p>Journal of Ophthalmology' in 2005<sup>ii</sup> of more than 4,000 Britons aged 75 and older showed that those who smoked were twice as likely to have age-related macular degeneration as those who did not.</p> <p>Other studies have found that the relative risk may be as high as three to four times that of a non-smoker. Importantly, a review of the association between smoking and age-related macular degeneration in Eye in September 2005<sup>iii</sup> that examined the results of 17 relevant studies found robust and consistent evidence that smoking causes visual impairment through age-related macular degeneration. Another study [Khan et al]<sup>iv</sup> showed that the risk is not limited to smokers but also applies to those exposed to passive smoke; their exposure means they have almost twice the risk of developing AMD as a non-smoker. Treatment options for AMD are limited and, where available, costly. Stopping smoking can reduce the risk of macular degeneration developing.</p>	
<b>Royal National Institute of Blind People</b>	4.3: Question two (continued from previous page)	7	Smoking can make diabetes related sight problems worse Smoking also is linked to the development of cataracts, and although they are treatable and therefore do not lead to blindness, they remain a major cause of sight loss in the UK.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
<b>Royal National Institute of Blind People</b>	4.3: Question 5	7	RNIB and its supporters have produced some "top tips" for health care professionals which bring together key recommendations aimed at improving care services for people with sight loss. See <a href="http://www.rnib.org.uk/toptips">www.rnib.org.uk/toptips</a>	Thank you for alerting us to this resource.

			<p>of fluoride as advised in Delivering Better Oral Health.</p> <p>The section discusses how certain population groups attend more regularly and are more likely to engage in oral hygiene practices. It is not clear however; what inference the reader is to take from this in the context of practice based oral health promotion (OHP). It would be helpful to be explicit to avoid misinterpretation (e.g. a team member may consider it less important to support a woman with their oral health promotion as they are more likely to brush regularly and attend he dentist often. This could lead to increase in inequalities).</p> <p>The second last line contains a typo (missing word “use”?) between ‘to’ and ‘other’.</p> <p>We suggest the removal of the reference to mouthwash in the final line as there is some debate about its use as an oral health aid, e.g. using mouthwash after brushing will rinse away the toothpaste and minimise the benefit of the fluoride in the toothpaste. It also conflicts with the ‘spit don’t rinse’ advice in Delivering Better Oral Health.</p>	<p>accordingly.</p> <p>Thank you for your comment, the scope has been amended accordingly.</p> <p>Thank you for your comment, this has been corrected.</p> <p>Thank you for your comment, the scope has been amended accordingly.</p>
	4.1.1	5	<p>The guideline should give advice on age children should be attending dental practice from. Getting mothers to bring their children to the practice when teeth first erupt has a number of benefits. Firstly it allows the dental team to provide preventive advice before teeth become carious, provides parent with information to establish good oral hygiene practice with child from early age and also can help children acclimatise to dental surgery environment.</p>	<p>Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.</p> <p>In addition, forthcoming guidance, ‘Oral health: local</p>

			<p>It would be helpful if this guidance could support dental teams to customise their behaviour change interventions in order to meet the needs of individuals or population groups, e.g. BASCD conference April 2014 included research on patients with learning disabilities who had preferences very different to those predicted by the dental professionals providing their service.</p> <p>There is a need to acknowledge the evidence base that shows that increasing knowledge is not enough to cause changes in behaviour. Despite this, there is a need to empower patients and the public by increasing their awareness of dental issues and the treatments they are entitled to under the NHS and at what cost. The Ottawa charter supports the empowerment of communities in order to improve health and it would certainly be helpful for dental patients (or potential patients) to have sufficient knowledge to empower them in a dental setting.</p> <p>The approach around conveying oral health messages is a large topic and it rather seems that addressing the positive experience element of dental visits is another large topic that may benefit from a separate guidance document. Given the complexities of the topic it may be difficult to address it fully here. It is likely to cover much more than how messages are conveyed, covering, for example, patient outcomes, waiting times, patient satisfaction, dignity and respect, access and car parking, etc.</p> <p>We support the need for guidance in relation to verbal information. Ideally this</p>	<p>Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.</p> <p>Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.</p> <p>The scope has been refined to clarify that the guidance will include positive experience in relation to approaches to promoting positive oral health behaviour. Anxiety management or patient experience beyond that of oral health promotion is beyond the remit of this guidance. Noted, thank you; we</p>

	4.2.1a	6	would include: <ol style="list-style-type: none"> <li>1. How to increase effectiveness of brief advice</li> <li>2. What interventions are needed to support brief advice, e.g. leaflet, follow up phone call?</li> <li>3. When and how verbal messages should be given</li> <li>4. Which approach(es) is most and least effective?</li> <li>5. How should approaches be used in combinations?</li> <li>6. It would be useful to include examples of good practice (or case studies) that are culturally sensitive to population groups/individuals, e.g. BME groups with poor literacy skills may not read in any language so written materials may be inappropriate.</li> <li>7. How to evaluate interventions</li> <li>8. How to share learning of good (and poor) practice from evaluations</li> </ol>	anticipate that the committee will explore these issues when developing the guidance.
	4.2.1b	6	There is a need to be aware of pragmatic considerations for dental teams, e.g. time limitations, when recommending techniques for practical demonstrations.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
	4.2.1c	6	Ideally any resources would be developed once nationally rather than having numerous, locally developed resources. That way they could have a consistent look and feel and deliver the same messages in the most effective way. This would also allow OHP teams to use the resources as well as dental teams.	
	4.2.1d	6	It would be useful to include what media should be used, and in what way, to support the face to face interventions delivered by dental teams, e.g. apps, websites, SMS, twitter, Facebook etc. Dental teams and oral health promotion teams would benefit from knowing how best to utilise these methods to facilitate behaviour change.

			It would be useful to know which medium is best for a specific purpose and which is most effective overall (if possible). Also it would be good to stress which are least effective and not to be recommended.	
	4.2.2a	6	We suggest that the evidence base underpinning positive oral health behaviours does need to be covered. There is no need however; to cover the evidence base underpinning disease prevention (which is perhaps what is meant here?).	The guidance has been amended and now clarifies that it is the evidence base underpinning oral health advice for patients that will not be covered by this guidance.
	4.2.2f	7	We suggest that it would be useful to include OHP in residential or care settings in the scope, where that OHP is being delivered by dental teams. This is a high need and vulnerable group and therefore a high priority for any behaviour change or preventive intervention.	Residential care settings care beyond the remit of this guidance; guidance is currently in development on oral health in nursing and residential care see: <a href="http://guidance.nice.org.uk/PHG/62">http://guidance.nice.org.uk/PHG/62</a>
	4.3	7	Agree that questions 1 and 2 are appropriate  Question 3: could perhaps be more explicit, e.g. what techniques or support should dental teams utilise to effectively when delivering OHP messages?  Question 4 again could be made more explicit, e .g. how can dental teams help patients and the public change their behaviour in order to improve their	Thank you for your comments; the questions in the scope are intended to be overarching and will be further refined when the protocol for the review of evidence is developed. However, we have made small

			<p>oral health?</p> <p>Question 5: could be supported by explaining what is meant by a positive experience. This depends on numerous factors, some of which are outside the control of the dental team. Overall we feel the 'positive experience' element of this guidance is a distinct and complex issue that would be best dealt with separately.</p> <p>Expected outcomes: Some of these are highly challenging and this guidance may not have sufficient impact to address them, particularly outcomes 2,5 and 6 which require a whole system approach. For example substantial changes to disease at a population level are not likely to be achieved without interventions that prevent disease in those who do not attend the dentist.</p> <p>We suggest instead that the outcomes should be less ambitious and more closely focused on the purpose of the document, .e.g focusing on changing the techniques and media employed by dental teams when delivering OHP interventions. They should also be measurable.</p>	<p>amendments to help clarify the questions.</p> <p>The outcomes of interest are wide-ranging and, for example, cover both knowledge and behaviour. We have made small amendments to the wording of the outcomes of interest to clarify that these outcomes relate to those people who have attended the dentist rather than outcomes in the wider population.</p>
	Appendix B	10	<p>Patient's experience – suggest this should be dealt with separately to OHP</p>	<p>The scope has been refined to clarify that the guidance will include positive experience in relation to approaches to promoting positive oral health behaviour. Anxiety management or patient experience beyond that of oral</p>

			<p>Critical elements – suggest ‘status’ be changed to ‘role’ and ‘way it is delivered’ changed to ‘techniques employed’. Should also include investigation of appropriate use of skill mix.</p> <p>Intensity of an activity – what is meant by this? Unclear</p> <p>Any factors that prevent or support effective implementation – suggest changing to ‘any factors that act as barriers and enablers to effective delivery of practice-based OHP’</p>	<p>health promotion is beyond the remit of this guidance.</p> <p>Thank you for your suggestions, the scope has been amended accordingly.</p>
Torbay and Southern Devon Health and Care NHS Trust	1		TIME. Properly allocated appointments with oral health educators who are trained to convey oral health messages Integrating oral health education into the school education system	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
Torbay and Southern Devon Health and Care NHS Trust	2		Yes. As an oral health educator myself, I talk to patients about links to the body re oral health/diet choices. Many are unaware of the full impact.	Noted, thank you.
Torbay and Southern Devon Health and Care NHS Trust	3		Taking it seriously enough to warrant giving an oral health educator a suitable environment to work from with the equipment needed to do the job. Many OHE’s are trying to work out of the equivalent of a broom cupboard with very little in the way of resources. The perception from this environment by the general public is that OHE is only an ‘add on’.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
Torbay and Southern Devon	4		All disciplines singing from the same hymn sheet. Other projects e.g.	Thank you for your comment;

Health and Care NHS Trust			Change4life talk about lowering sugar by choosing one product rather than another. This may help with sugar consumption re general health but not dental health. Better TV promotion. Why are mouthwash ads advising rinsing after brushing while we are advertising spit not rinse??	we anticipate that the committee will explore these issues when developing the guidance.
Torbay and Southern Devon Health and Care NHS Trust	5		More time allowed for getting to know the patients rather than the working treadmill we all seem to be on at the moment. Nurseries/playgroups having 'play' equipment/age appropriate DVD's about a visit to the dentist to prepare them prior to attending.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
Torbay and Southern Devon Health and Care NHS Trust	General		I am also qualified as a Level 2 smoking cessation advisor but due to 'contracts and commissioners and red tape' I am unable to use this qualification.	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
Torbay and Southern Devon Health and Care NHS Trust			I am also qualified to apply fluoride varnish but due to lack of appropriate equipment am unable to use this qualification too. WHAT A WASTE!!!!	Thank you for your comment; we anticipate that the committee will explore these issues when developing the guidance.
Torbay and Southern Devon Health and Care NHS Trust			Until the role of an oral health educator is taken more seriously by the dental profession as a whole a valuable resource is not being fully utilised.	Noted, thank you.
