Search approach

The literature search approach was iterative and emergent. A small number of bibliographic databases was used to focus on the relevant case studies. Sensitive searches of bibliographic databases were not an efficient use of time to locate the evidence required for this review. A range of supplementary techniques was used to locate the grey literature. The databases were chosen for their relevance to TB and their coverage of UK studies, grey literature, the social sciences and cost effectiveness. The database results were downloaded and de-duplicated in Reference Manager (version 12). The results of the grey literature searches were recorded in Microsoft Word. The techniques used were:

- Website searching

- Google searching

- Database searching

- Supplementary searching

    o Reference harvesting

    o PubMed related item searching

    o Citation searching before database searching

    o Citation searching following initial screening

Full details on the methods used are provided below.

In addition to these search techniques the following methods were also used:
- Call for evidence

- Members of the Guideline Development Group were canvassed

- Potentially relevant references identified during the screening for review 3 were entered into Reference Manager

Website searching

The following websites were browsed for relevant documents. All sites were also searched for "TB" or "tuberculosis. The website searching was conducted 10-14 March 2014.

Supplementary methods

Reference harvesting - all of the references available on Web of Science were downloaded and then the full text was obtained and any further relevant references were also added

Citation searching - all of the citations available on Web of Science were downloaded

PubMed related item - if there were 1-100 references they were all downloaded if they were relevant to the scope. If there were 101 or more references they were sorted by relevance and then the first 100 were downloaded if they were relevant to the scope. Relevant to the scope meant TB or tuberculosis was in the title.

All three methods were conducted on 19 March 2014 using the following papers.

Adalat S, Paliwalla M, Novelli V et al. (2008) A survey of tuberculosis services in the UK. Archives of Disease in Childhood 93 (7): 575-577.

Balasegaram S, Grant R, Ormerod P (2008) A survey of tuberculosis clinic provision in England and Wales. Public Health 122 (6): 602.

Barrett JC, Dart S, Solamalai A et al. (2011) Tuberculosis outcome following pre-treatment assessment for directly observed or selfadministered therapy: Still room for improvement? Thorax 66: A89.

King R, Carter MJ, Mungall SB et al. (2009) Does a specialist TB nurse service improve outcome? Thorax 64: A121-A122

Millet JP, Shaw E Orcau A (2013) Tuberculosis recurrence after completion treatment in a European city: reinfection or relapse? PLoS ONE. 8(6): e64898.

Tsikoudas A (2003) Management pathways and the surgical diagnosis of tuberculous lymphadenitis: Can they be improved? The Bradford experience. ORL 65 (5): 261-265.

Post search supplementary methods

Following the initial screening a further round of supplementary searching was conducted. The papers that had been identified as potentially relevant for the review during the sifting stage were used for citation searching. All of the citations available on Web of Science were downloaded and then de-duplicated against what had already been screened. At least one paper was chosen for each of the case studies. Citation searching for effectiveness studies was conducted on 5 June 2014 and for cost effectiveness studies on 3 July 2014.

The following papers were used for citation searching for effectiveness studies.
