

## Spinal injury: assessment and initial management

**Spinal injury assessment: assessment and imaging for spinal injury**

*NICE Guideline NG41*

*Appendices A - F*

*February 2016*

*Final*

*Commissioned by the National Institute for Health and Care Excellence*

**Disclaimer**

Healthcare professionals are expected to take NICE clinical guidelines fully into account when exercising their clinical judgement. However, the guidance does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of each patient, in consultation with the patient and/or their guardian or carer.

## Appendix A: Scope

### NATIONAL INSTITUTE FOR HEALTH AND CARE EXCELLENCE

### SCOPE

#### 1 Guideline title

Spinal injury assessment: assessment and imaging and early management for spinal injury (spinal column or spinal cord injury).

##### 1.1 Short title

Spinal injury assessment

#### 2 The remit

The Department of Health has asked NICE: 'To produce guidance on the assessment and imaging of patients at high risk of spinal injury.'

NICE is developing 5 pieces of guidance relating to trauma, with expected publication dates in June and October 2015 (to be confirmed). Each piece of guidance will focus on a different aspect of trauma care.

- [Complex fractures: assessment and management of complex fractures \(including pelvic fractures and open fractures of limbs\)](#)
- [Fractures: diagnosis, management and follow up of fractures \(excluding head and hip, pelvis, open and spinal\)](#)
- [Major trauma: assessment and management of airway, breathing and ventilation, circulation, haemorrhage and temperature control.](#)
- [Spinal injury assessment: assessment and imaging of patients at high risk of spinal injury](#)
- [Trauma services: service delivery of trauma services](#)

NICE has commissioned the National Clinical Guideline Centre (NCGC) to develop the trauma guidance. The fractures, complex fractures, spinal injury assessment and major trauma guidelines will start development approximately

6 months before the development of the trauma service delivery guideline.

### **3 Clinical need for guidance**

#### **3.1 *Epidemiology***

- a) Spinal injury involves traumatic fracture or derangement of the spinal column, sometimes leading to spinal cord injury. If suspected spinal injury occurs, careful immobilisation is of great importance. Occasionally spinal cord injury may occur in the absence of overt spinal column damage. Such injuries often lead to serious neurological damage, causing paraplegia, tetraplegia or death.
- b) The main causes of spinal injury are road traffic collisions, falls, violent attacks, sporting injuries and domestic accidents. Although spinal injury affects all ages, young and middle aged men and older women tend to be the populations at highest risk. Half of all spinal injuries affect the cervical spine.
- c) Approximately 500–600 people sustain acute traumatic injuries to the spinal cord each year in the UK. A European study suggests about five times as many people will suffer a spinal fracture or dislocation alone. Approximately 5% of people experiencing high energy poly-trauma have an unstable spinal column injury.

#### **3.2 *Current practice***

- a) Initial assessment is a triage procedure carried out by pre-hospital care staff to establish the existence or likely existence of an injury, the severity and range of traumatic injuries found. All patients with major traumatic injuries whether or not they include spinal injuries, should be taken to the local trauma unit or centre, usually by emergency services.
- b) There are differences in the mode of immobilisation of patients with suspected spinal injuries across the UK. While all people will need

immobilisation after a suspected spinal injury, there is no clear single best method or clinical working practice identified.

- c) If a patient with a suspected spinal cord injury has been sent to a local trauma centre or trauma unit, treating consultants are expected to contact the on-call consultant in a spinal cord injury centre for advice on management and referral. Patients are referred to spinal cord injuries units for acute care and rehabilitation.
- d) Once in the trauma centre, trauma unit or spinal cord injury centre, spinal imaging and assessment is needed and should be reviewed by an appropriately trained radiologist.
- e) After the acute stage, later assessment of disabilities and need for rehabilitation should occur, as it is a critical part of maximising recovery from spinal injury.
- f) The patterns of referral of people with spinal cord injury to spinal cord injury centres are inconsistent, with only 7% of cases referred within 1 day of injury, and 59% being admitted within 1 month. Such delays may lead to complications and longer hospital stays. These delays may be partially due to inappropriate methods of assessment.

#### **4 The guideline**

The guideline development process is described in detail on the NICE website (see section 6, 'Further information').

This scope defines what the guideline will (and will not) examine, and what the guideline developers will consider. The scope is based on the referral from the Department of Health.

The areas that will be addressed by the guideline are described in the following sections.

## **4.1 Population**

### **4.1.1 Groups that will be covered**

All adults, young people and children who present with suspected spinal column or spinal cord injury secondary to a traumatic event.

### **4.1.2 Groups that will not be covered**

People whose spinal injury is caused by disease, rather than a traumatic event.

## **4.2 Healthcare setting**

All settings in which NHS care is received or commissioned.

## **4.3 Clinical management**

### **4.3.1 Key clinical issues that will be covered**

- a) Initial triage and management by pre-hospital care staff:
  - primary survey assessment for spinal injury with specific risk tools
  - methods to protect spine and transfer patient
  - determining the immediate destination of patient.
- b) Acute-stage clinical assessment:
  - primary survey assessment for spinal injury
- c) Acute-stage clinical management of early medical intervention (such as anti-inflammatories, antioxidants and anti-excitotoxins).
- d) Acute-stage imaging assessment of different imaging modalities, such as:
  - X-ray (including dynamic fluoroscopy)
  - CT
  - MRI.

Further imaging assessment in people who may have clinical signs of spinal injury, but who have normal or indeterminate findings on initial imaging.

- e) Timing of referral and the criteria for acceptance by tertiary services.
- f) Skills to be present within the multidisciplinary team
- g) Documentation of clinical assessments and management for people with spinal injuries (including pre hospital and hospital documentation)
- h) Information and support needs of patients and their families and carers when appropriate.

#### **4.3.2 Clinical issues that will not be covered**

- a) Prevention of traumatic spinal injury.
- b) Management of spinal injury in a tertiary centre.
- c) Management and follow-up of pathological conditions predisposing to spinal injury (such as osteoporosis and osteoarthritis).

The following NICE guidance will be cross referred to

- d) Major trauma (pain relief and airway management)
- e) Head injury

#### **4.4 Main outcomes**

- a) Adverse effects associated with assessment, imaging, stabilisation and transfer
- b) Diagnostic accuracy (sensitivity and specificity).
- c) Complications of poor handling, poor resuscitation and delayed bony stabilisation.

- d) Functional scales that quantify level of disability, such as the SCIM III.
- e) Health-related quality of life.
- f) Healthcare contacts; duration and continuity.
- g) Return to normal activities.
- h) Morbidity.
- i) Mortality.
- j) Patient-reported outcomes.

#### **4.5 Economic aspects**

Developers will take into account both clinical and cost effectiveness when making recommendations involving a choice between alternative interventions. A review of the economic evidence will be conducted and analyses will be carried out as appropriate. The preferred unit of effectiveness is the quality-adjusted life year (QALY), and the costs considered will usually be only from an NHS and personal social services (PSS) perspective. Further detail on the methods can be found in 'The guidelines manual' (see 'Further information').

#### **4.6 Status**

##### **4.6.1 Scope**

This is the final scope.

##### **4.6.2 Timing**

The development of the guideline recommendations will begin in June 2013.

## **5 Related NICE guidance**

### **5.1 Published guidance**

- [Patient experience in adult NHS services](#). NICE clinical guideline 138 (2012).
- [Head injury](#). NICE clinical guideline 56 (2007).

### **5.2 Guidance under development**

NICE is currently developing the following related guidance (details available from the [NICE website](#)):

- Head injury. NICE clinical guideline. Publication expected January 2014.
- Non complex Fractures. NICE clinical guideline. Publication expected TBC 2015.
- Complex fractures. NICE clinical guideline. Publication expected TBC 2015.
- Major trauma. NICE clinical guideline. Publication expected TBC 2015.
- Trauma services. NICE clinical guideline. Publication expected TBC 2015.

## **6 Further information**

Information on the guideline development process is provided in the following documents, available from the NICE website:

- [How NICE clinical guidelines are developed: an overview for stakeholders the public and the NHS](#)
- [The guidelines manual](#). 2012

Information on the progress of the guideline will also be available from the [NICE website](#).

## Appendix C: Review protocols

### C.1 Protecting the spine

**Table 128: Protecting the spine review protocol**

Review question	What is the clinical and cost effectiveness of routine spinal protection of all children, young people and adults experiencing trauma compared to selective protection, based on the use of a risk tool/clinical assessment at the scene of the incident/presentation?
<b>Objective</b>	To determine the effectiveness of routine spinal protection compared to selective protection based on a risk tool/clinical assessment at the scene of the incident/presentation.
<b>Population</b>	Children, young people and adults experiencing a traumatic incident.
<b>Intervention</b>	Routine spinal protection (of everyone assessed as having a traumatic incident).
<b>Comparison</b>	Selective spinal protection based on a a) risk tool (Canadian C-spine rules, JRCALC, BTS gl) or/and b)clinical assessment (Hoffman 2000, JRCALC)
<b>Outcomes</b>	<p>Critical:</p> <p>Mortality.</p> <p>Quality of life.</p> <p>Rates of SCI</p> <p>Missed spinal column/cord injury, spinal cord neurological function (ASIA and Frankel)</p> <p>Adverse effects (pressure ulcers, airway compromise, raised ICP, neurological deterioration [ASIA]) associated with spinal protection/immobilisation</p> <p>Important:</p> <p>Unnecessary imaging</p> <p>Patient-reported outcomes (pain/discomfort, return to normal activities, psychological wellbeing).</p> <p>Population size and directness:</p> <p>No limitations on sample size</p> <p>Studies with indirect populations will not be considered</p>
<b>Exclusion</b>	People with spinal cord/column injury directly caused by a disease process (without a traumatic event).
<b>Search strategy</b>	<p>Databases: Medline, Embase, the Cochrane Library</p> <p>Date: All years</p> <p>Language: Restrict to English only</p> <p>Study designs: RCT, SR , if none then go down to Cohort or case-control, prospective observational studies</p>
<b>The review strategy</b>	<p>Stratified by age (children, adults)</p> <p>Subgroup by: (children: neonate &lt;28 days, infant , child, young people)</p> <p>(adults: up to 65 and elderly 65+)</p> <p>Risk tool (look at all together)</p> <p>Clinical assessment (keep separate from risk tool)</p>

## C.2 Spinal injury assessment risk tools

**Table 129: Spinal injury assessment risk tools review protocol**

Review question	What tools are most predictive of spinal injury in people with suspected traumatic spinal injury when trying to exclude spinal cord injury (with or without spinal column injury) or isolated spinal column injury?
Objective	To determine the more accurate non-imaging method to exclude a) isolated spinal column injury b) spinal cord injury (with or without spinal column injury), in people with suspected traumatic spinal injury
Population	Children, young people and adults with suspected traumatic spinal injury
Clinical assessment tool	Canadian Cervical-Spine Rule NEXUS (National Emergency X-Radiography Utilization Study) Australian SPINEX card ASIA REMSSAP
Reference test	Later imaging findings Later surgical findings Later clinical findings Autopsy
Outcomes	Diagnostic accuracy (sensitivity, specificity, positive predictive value, negative predictive value, likelihood ratios) Population size and directness: No limitations on sample size Studies with indirect populations will not be considered
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event
Search strategy	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: cohort studies
The review strategy	Criteria for individual studies: Multivariate analysis (exclude if variables have not been controlled for in the analysis depending on the quantity and quality of the papers found) Hierarchy of evidence: IPD meta-analysis (Gold standard) Meta-analysis/systematic reviews Cohort studies External validation studies will also be included  Stratify by age: children (0-17 years), adults (18 and over) Subgroup children by: infants (< 1 year), younger child (1-12 years) and older child / young person (12 years and older) Sub-group adults by: 18- 65 years and > 65 years Stratify by area of spine: cervical, thoracic, lumbosacral Sub-group by presence of comorbidities (that is ankylosing spondylitis)

### C.3 Immobilising the spine - pre-hospital strategies

**Table 130: Immobilising the spine - pre-hospital strategies review protocol**

Review question	What pre-hospital strategies to protect the spine in people with suspected traumatic spinal injury are the most clinically and cost effective during transfer from the scene of the incident to acute medical care?
Objective:	<p>To determine which interventions should be used to protect the spine and spinal cord pre-hospital.</p> <p>To determine which interventions improve outcomes (or cause least harm) and most cost effective.</p> <p>To assess transfer to acute medical care settings.</p>
Population	<p>Children, young people and adults experiencing a traumatic incident.</p> <p>If no evidence is identified the indirect population of healthy volunteers will be considered</p>
Intervention	<p>Spinal boards (long or short)</p> <p>Rescue board</p> <p>Scoop stretcher</p> <p>Spinal extrication devices</p> <p>Back boards</p> <p>Collar and back board combinations</p> <p>Vacuum mattress</p> <p>Mattress splints</p> <p>Collars (rigid or soft)</p> <p>Manual stabilization</p> <p>Sand bags, straps and tapes, head blocks, aqua board</p> <p>Kendrick Extrication Device (KED)</p> <p>Or any combinations of the above</p>
Comparison	<p>Standard care</p> <p>Do nothing</p> <p>To each other or in combination</p>
Outcomes	<p>Critical:</p> <p>Mortality at 1 month</p> <p>Mortality at 6 months</p> <p>Mortality at 12 months</p> <p>Health related quality of life</p> <p>Rates of spinal cord injury (SCI)</p> <p>Missed spinal column/cord injury</p> <p>Spinal cord neurological function at 1 month(including ASIA and Frankel)</p> <p>Spinal cord neurological function at 6 months(including ASIA and Frankel)</p> <p>Spinal cord neurological function at 12 months (including ASIA and Frankel)</p> <p>Adverse effects:</p> <p>Pressure ulcers</p> <p>Airway compromise</p> <p>Raised ICP</p> <p>Neurological deterioration [ASIA]) associated with spinal protection/immobilisation.</p> <p>Important:</p> <p>Pain/discomfort</p> <p>Return to normal activities</p>

Review question	What pre-hospital strategies to protect the spine in people with suspected traumatic spinal injury are the most clinically and cost effective during transfer from the scene of the incident to acute medical care?
	<p>Psychological wellbeing</p> <p>Population size and directness: No limitations on sample size Studies with indirect populations will be considered Within class comparison</p>
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event.
Search strategy	<p>Databases: Medline, Embase, The Cochrane Library</p> <p>Date: All years</p> <p>Language: Restrict to English only</p> <p>Study designs: RCTs or Systematic reviews of RCTs; cohorts or case-controls if no RCTs retrieved.</p>
The review strategy	<p>Stratification from outset</p> <p>Age: children (0-17 years); adults (18 years and over)</p> <p>Area of spine: cervical, thoracic, lumbosacral</p> <p>Sub-groups if between-study heterogeneity exists</p> <p>Children: neonate (&lt;28 days), infant (to 1 year), child (1-15 years), young people(16-17 years)</p> <p>Adults: 18-65 years and &gt; 65 years.</p> <p>Presence of comorbidities (i.e. Ankylosing Spondylitis)</p>

## C.4 Destination (immediate)

**Table 131: Destination spinal column review protocol**

Review question	What is the optimal immediate destination of a person at risk of a traumatic spinal column injury
Objective:	To determine the optimal immediate destination of a person at risk of a traumatic spinal column injury once a clinical assessment has occurred
Population	Children, young people and adults at risk of a traumatic spinal column injury with and without neurology and without other life threatening injuries
Intervention	Major trauma centre (combined and/or isolated)
Comparison	Emergency department of district general hospital Trauma unit
Outcomes	<p>Critical:</p> <p>Mortality at 1, 6 and 12 months and 2 years</p> <p>Health related quality of life and 2 years</p> <p>Missed diagnosis</p> <p>Mis-diagnosis</p> <p>Adverse events: changes in neurology</p> <p>Important:</p> <p>Length of hospital stay</p> <p>Discharge destination and transitional</p> <p>Patient-reported outcomes (pain/discomfort, return to normal activities, psychological wellbeing, psychosocial wellbeing)</p>

Review question	What is the optimal immediate destination of a person at risk of a traumatic spinal column injury
	Population size and directness: No limitations on sample size Studies with indirect populations will not be considered
Exclusion	People with spinal injury directly caused by a disease process without a traumatic event
Search strategy	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: retrospective and prospective cohorts.
The review strategy	Stratify by age: children (0-17 years), adults (18 and over) Sub-group children by: neonate (<28 days), infant (to 1 year), child (1-15 years), young people(16-17 years) Sub-group adults by: 18- 65 years and > 65 years. Sub-group: immediately life threatening traumas

**Table 132: Destination spinal cord review protocol**

Review question	What is the optimal immediate destination of a person at risk of a traumatic spinal cord injury
Objective:	To determine the optimal immediate destination of a person at risk of a traumatic spinal cord injury once a clinical assessment has occurred
Population	Children, young people and adults at risk of a traumatic spinal cord injury with and without neurology and without other life threatening injuries
Intervention	Spinal cord injury centre
Comparison	Major trauma centre (combined and/or isolated)
Outcomes	Critical: Mortality at 1, 6 and 12 months and 2 years Health related quality of life Missed diagnosis Mis-diagnosis Adverse events: changes in neurology Important: Length of hospital stay Discharge destination and transitional Patient-reported outcomes (pain/discomfort, return to normal activities, psychological wellbeing, psychosocial wellbeing)  Population size and directness: No limitations on sample size Studies with indirect populations will not be considered
Exclusion	People with spinal injury directly caused by a disease process without a traumatic event
Search strategy	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: retrospective and prospective cohorts.
The review strategy	Stratify by age: children (0-17 years), adults (18 and over)

Review question	What is the optimal immediate destination of a person at risk of a traumatic spinal cord injury
	Sub-group children by: neonate (<28 days), infant (to 1 year), child (1-15 years), young people (16-17 years) Sub-group adults by: 18- 65 years and > 65 years. Sub-group: immediately life threatening traumas

## C.5 Diagnostic imaging

**Table 133: Diagnostic accuracy of imaging modalities review protocol**

Review question	What is the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy, iii) CT and iv) MRI for people with traumatic spinal cord injury (with or without column injury)? What is the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy, iii) CT and iv) MRI for people with traumatic spinal column injury alone?
Objective	To determine the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy, iii) CT and iv) MRI for people with suspected traumatic spinal injury (spinal cord or spinal column injury, separately)
Population	Children, young people and adults with suspected traumatic spinal injury
Index test	X-ray Dynamic fluoroscopy CT MRI.
Reference test	Surgical findings Later clinical findings Autopsy findings.  MRI and CT may serve as gold standards for x-ray and dynamic fluoroscopy.  CT may serve as gold standard for any index test designed to detect bony injuries. MRI may serve as gold standard for any index test designed to detect spinal cord injuries.
Outcomes	Diagnostic accuracy Adverse events: effects of radiation  Population size and directness: No limitations on sample size Studies with indirect populations will not be considered
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event
Search strategy	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: randomised control trials, diagnostic cohorts studies (retrospective or prospective), cross-sectional studies or systematic reviews of the above
The review strategy	Separate diagnostic reviews for a) spinal cord injury and b) isolated spinal column injury. Within each of those 2 main reviews, do separate analyses for each separate index test/reference test combination. Stratify by age: children (0-17 years), adults (18 and over)

<b>Review question</b>	<b>What is the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy, iii) CT and iv) MRI for people with traumatic spinal cord injury (with or without column injury)?</b> <b>What is the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy, iii) CT and iv) MRI for people with traumatic spinal column injury alone?</b>
	Sub-group children by: infants (< 1 year), younger child (1-12 years) and older child / young person (12 years and older) Sub-group adults by: 18- 65 years and > 65 years  Stratify by area of spine: cervical, thoracic, lumbosacral. Sub-group by presence of comorbidities (that is, ankylosing spondylitis)

## C.6 Radiation risk

**Table 134: Radiation risk review protocol**

<b>Review question</b>	<b>For people with clinical signs of spinal injury what are the radiation risks of having a X-ray(s) and/or CT scans</b>
Objectives	To estimate the risks of radiation exposure in people with spinal injuries having a X-ray(s) and/or CT scans
Population	Children, young people and adults undergoing an X-ray and/or CT
Prognostic factors	X-ray CT
Outcomes	Critical: Mortality (including all-cause mortality) Genetic mutational risk Non-cancer (cataracts, radiation skin changes) Cancer (lag of $\geq 10$ years) Breast cancer Brain tumours Cancers of the gonads Leukaemia Lymphoma Thyroid cancer Confounders Current cancer diagnosis Previous cancer Age
Search	Databases: Medline, Embase, the Cochrane Library Date: 1995 onwards Language: restrict to English only
Review strategy	Appraisal of methodological quality: the methodological quality of each study will be assessed using NGCG quality table from prognostic sub-group.  Systematic reviews of cohorts, or prospective and retrospective cohorts if no systematic reviews retrieved

## C.7 Further imaging

**Table 135: Re-imaging review protocol**

Review question	For people who have clinical signs of traumatic spinal cord or column injury, but who have normal or indeterminate findings on imaging, what is the most clinically and cost effective further imaging strategy?
Objective	To investigate the most effective imaging strategies for people in whom first-line imaging is not in concordance with clinical findings
Population	Children, young people and adults with clinical signs of traumatic spinal injury, but have normal or indeterminate findings on initial imaging.
Intervention	Dynamic fluoroscopy (if X-ray already performed) CT (if X-ray already performed) MRI (if X-ray or CT already performed)
Comparison	CT MRI Repeat initial modality with contrast and/or different parameters Repeat initial modality with different scanning location or body position.
Outcomes	<p>Critical:</p> <p>Mortality at 1 month Mortality at 6 months Mortality at 12 months Health related quality of life Rates of spinal cord injury (SCI).</p> <p>Important:</p> <p>Adverse effects: Effects of radiation Effects of sedation/anaesthetic Delay in treatment of other injuries whilst re-imaging Pain/discomfort Return to normal activities Psychological wellbeing.</p> <p>Population size and directness: No limitations on sample size Studies with indirect populations will not be considered.</p>
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event.
Search strategy	Databases: Medline, Embase, The Cochrane Library Date: All years Language: Restrict to English only Study design: RCTs or systematic reviews of RCTs, prospective and retrospective cohorts.
The review strategy	Stratification from outset Age: children (0-17 years); adults (18 years and over) Area of spine: cervical, thoracic, lumbosacral  Sub-groups if between-study heterogeneity exists Children: infant (< 1 year), younger children child (1-12 years), older child / young

<b>Review question</b>	<b>For people who have clinical signs of traumatic spinal cord or column injury, but who have normal or indeterminate findings on imaging, what is the most clinically and cost effective further imaging strategy?</b>
	person(> 12 years) Adults: 18-65 years and > 65 years. Presence of comorbidities (i.e. Ankylosing spondylitis)

## C.8 Spinal cord decompression

**Table 136: Spinal cord decompression review protocol**

<b>Review question</b>	<b>What is the clinical and cost-effectiveness of emergency closed reduction of cervical facet joint dislocation of the cervical spine?</b>
Objective:	To find the effectiveness of emergency reduction in cervical facet joint dislocations
Population	Children, young people and adults with acute traumatic cervical dislocations
Intervention	Emergency closed reduction (within 4 hours of injury)
Comparison	Delayed closed reduction (after 4 hours) No reduction
Outcomes	Critical: Mortality at 1, 6 and 12 months Health related quality of life Spinal cord neurological function at 1, 6 and 12 months (including ASIA and Frankel) Adverse effects (deterioration in neurological function, acute cervical disc prolapse) Important: Patient-reported outcomes (pain/discomfort, return to normal activities, psychological wellbeing)  Population size and directness: No limitations on sample size Studies with indirect populations will not be considered
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event
Search strategy	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: RCTs or Systematic reviews of RCTs, observational cohorts; case series for adverse events only.
The review strategy	Analysis: stratify by age: children (0-17 years), adults (18 and over) Subgroup children by: infants (< 1 year), younger child (1-12 years) and older child / young person (12 years and older) Sub-group adults by: 18- 65 years and > 65 years. Sub-group by presence of comorbidities (i.e. ankylosing spondylitis).

## C.9 Timing of referral to tertiary services

**Table 137: Timing of referral to tertiary services review protocol**

<b>Review question</b>	<b>Is there a benefit of early liaison and referral (within 4 hours) to spinal cord injury centres compared to delayed liaison?</b>
------------------------	---

<b>Review question</b>	<b>Is there a benefit of early liaison and referral (within 4 hours) to spinal cord injury centres compared to delayed liaison?</b>
<b>Objective</b>	To notify the SCIC that there is a person with traumatic suspected spinal cord injury that may require specialist input and acceptance to a SCIC. a. To start the conversation between the SCIC and referring unit on the most appropriate treatment for the SCI patient b. To record the patient on the database c. To trigger the system for outreach support between the SCIC and referring unit.
<b>Population</b>	Adults, young people and children with spinal cord injury
<b>Intervention</b>	Early liaison/referral with SCIC
<b>Comparison</b>	Later liaison/referral No liaison/referral
<b>Outcomes</b>	Critical: Mortality Quality of life Important: Pain levels (immediate, 1 week) Function and ADL (1 month, 3 months, 1 year, 3 years, 5 years) Length of SCIC stay Adverse events after transfer (immediate) For example altered neurological function Complications – pressure sores, contractures, stones, urological complications, poor spinal outcome Duration of admission  Population size and directness: No limitations on sample size Studies with indirect populations will not be considered
<b>Exclusion</b>	People with spinal cord or column injury directly caused by a disease process without a traumatic event.
<b>Search strategy</b>	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: RCTs or Systematic reviews of RCTs; cohorts or case-controls if no RCTs retrieved.
<b>The review strategy</b>	Stratify by age: children (0-17 years), adults (18 and over) Sub-group children by: neonate (<28 days), infant (to 1 year), child (1-15 years), young people (16-17 years) Sub-group adults by: 18- 65 years and > 65 years  Stratify by area of spine: cervical, thoracic, lumbosacral Stratify by type of selection tool (risk tool or clinical assessment) Sub-group by presence of comorbidities (that is, ankylosing spondylitis)

## C.10 Referral to SCIC

**Table 138: Referral to SCIC review protocol**

<b>Review question</b>	<b>What are the clinical factors associated with a positive outcome after transfer to an SCIC for patients with spinal trauma?</b>
------------------------	--

Review question	<b>What are the clinical factors associated with a positive outcome after transfer to an SCIC for patients with spinal trauma?</b>
<b>Objective</b>	At present acceptance to an SCIC is often determined by the SCIC's own criteria, some of which may be non-medical. To ensure that there is a more consistent approach across SCICs, it is vital to evaluate the prognostic factors associated with transfer to the SCIC.
<b>Population</b>	Adults, young people and children with spinal cord injury
<b>Prognostic factors</b>	Age Level of injury (Cervical ,Thoracic ,Lumbosacral) Density of injury (complete/partial)/severity of neurological impairment (ASIA) Co-existing psychiatric problems Co-existing head injuries (GCS) Co-existing respiratory problems Co-existing cardiovascular problems Co-existing non-spinal orthopaedic problems Co-existing infection Co-existing pressure sores Ventilator dependency Level of sedation
<b>Outcomes</b>	Critical: Mortality after transfer (time to event) Quality of life after transfer (at 1 week, 1 month, 3 months)  Important: Pain levels after No limitations on sample size Studies with indirect populations will not be considered
<b>Exclusion</b>	People with spinal cord or column injury directly caused by a disease process without a traumatic event
<b>Search strategy</b>	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: prospective and retrospective cohorts, or systematic reviews of cohorts. (In the event of no other studies consider using case control studies)
<b>The review strategy</b>	Appraisal of methodological quality: the methodological quality of each study will be assessed using NICE checklists Type of analysis: multivariable survival analysis Stratify by age: children (0-17 years), adults (18 and over) Subgroup children by: neonate (<28 days), infant (to 1 year), child (1-15 years), young people (16-17 years) Sub-group adults by: 18- 65 years and > 65 years  Stratify by area of spine: cervical, thoracic, lumbosacral Stratify by type of selection tool (risk tool or clinical assessment) Sub-group by presence of comorbidities (that is, ankylosing spondylitis)

## C.11 Neuroprotective pharmacological interventions

**Table 139: Neuroprotective pharmacological interventions review protocol**

Review question	What is the clinical and cost-effectiveness of neuroprotective pharmacological interventions (such as anti-inflammatories, antioxidants and anti-excitotoxins) in people with traumatic spinal cord injury during the acute stage?
Objectives	To find the effectiveness of pharmacological therapy in people with acute traumatic spinal cord injury.
Population	Children, young people and adults with traumatic spinal cord injury.
Intervention	<p>Antioxidants</p> <p>Glucocorticoids: Methylprednisolone (Medrone, Solu-Medrone, Depo-Medrone) Dexamethasone</p> <p>Anti-inflammatories NSAIDs: Non-selective: ibuprofen (Brufen) Selective Cox-2: celecoxib (Celebrex)</p> <p>Anti-excitotoxins Calcium channel blockers: Nimodipine (Nimotop) Opioid antagonist: Naloxone Thyrotropin releasing hormone (Protirelin)</p> <p>Or any of the above in combination</p>
Comparison	Usual care To each other Placebo
Outcomes	<p>Critical:</p> <p>Mortality at 1 month Mortality at 6 months Mortality at 12 months Health related quality of life Spinal cord neurological function at 1 month(including ASIA and Frankel) Spinal cord neurological function at 6 months(including ASIA and Frankel) Spinal cord neurological function at 12 months (including ASIA and Frankel) Adverse effects: GI bleeding Ventilated associated pneumonia Infection Hyperglycaemia Thrombosis.</p> <p>Important: Pain/discomfort Return to normal activities Psychological wellbeing Population size and directness:</p>

<b>Review question</b>	<b>What is the clinical and cost-effectiveness of neuroprotective pharmacological interventions (such as anti-inflammatories, antioxidants and anti-excitotoxins) in people with traumatic spinal cord injury during the acute stage?</b>
	No limitations on sample size Studies with indirect populations will not be considered.
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event. Delayed and long term pharmacological intervention.
Search strategy	Databases: Medline, Embase, The Cochrane Library Language: Restrict to English only Study designs: RCTs or Systematic reviews of RCTs.
The review strategy	Stratification from outset Age: children (0-17 years); adults (18 years and over) Area of spine: cervical, thoracic, lumbosacral  Sub-groups if between-study heterogeneity exists Children: infant (< 1 year), younger children child (1-12 years), older child / young person(> 12 years) Adults: 18-65 years and > 65 years. Timing of loading dose of intervention Dose Presence of comorbidities (i.e. Ankylosing spondylitis) Subsequent surgical fixation Duration of course

**Table 140: Non-pharmacological interventions**

<b>Review question</b>	<b>What is the clinical and cost-effectiveness of emergency closed reduction of cervical facet joint dislocation of the cervical spine?</b>
Objectives	To find the effectiveness of emergency reduction in cervical facet joint dislocations.
Population	Children, young people and adults with acute traumatic cervical facet joint dislocations.
Intervention	Emergency closed reduction (within 4 hours of injury).
Comparison	Delayed closed reduction (after 4 hours) No reduction
Outcomes	Critical: Mortality at 1 month Mortality at 6 months Mortality at 12 months Health related quality of life Spinal cord neurological function at 1month (including ASIA and Frankel) Spinal cord neurological function at 6 months (including ASIA and Frankel) Spinal cord neurological function at 12 months (including ASIA and Frankel) Adverse effects: Deterioration in neurological function Acute cervical disc prolapse Important: Pain/discomfort Return to normal activities

Review question	What is the clinical and cost-effectiveness of emergency closed reduction of cervical facet joint dislocation of the cervical spine?
	Psychological wellbeing  Population size and directness: No limitations on sample size Studies with indirect populations will not be considered.
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event.
Search strategy	Databases: Medline, Embase, The Cochrane Library Date: All years Language: Restrict to English only Study designs: RCTs or Systematic reviews of RCTs. Case series for adverse events only.
The review strategy	Stratification from outset Age: children (0-17 years); adults (18 years and over) Area of spine: cervical, thoracic, lumbosacral  Sub-groups if between-study heterogeneity exists Children: infant (< 1 year), younger children child (1-12 years), older child / young person(> 12 years) Adults: 18-65 years and > 65 years. Presence of comorbidities (i.e. Ankylosing spondylitis)

## C.12 Neuropathic pain

**Table 141: Neuropathic pain review protocol**

Review question	What are the optimum strategies given in the acute management stage to prevent later neuropathic pain in people with traumatic spinal cord injury?
Objectives	To determine the effectiveness of various acute pain management methods to prevent later neuropathic pain in people with traumatic spinal cord injury
Population	Children, young people and adults with traumatic spinal cord injury
Intervention	Amitriptyline Trazodone Duloxetine Venlafaxine Lamotrigine Mexilitine Carbamazepine Gabapentin Pregabalin Topiramate Sodium Valproate Clonidine Levetiracetam Ketamine Alfentanil Lidocaine Comparison

Review question	What are the optimum strategies given in the acute management stage to prevent later neuropathic pain in people with traumatic spinal cord injury?
	No treatment Placebo
Comparison	Each other Placebo No treatment
Outcomes	Critical: Mortality at 1, 6 and 12 months Neuropathic pain at 1, 6 and 12 months Health related quality of life Adverse events: Dizziness and visual disturbance Nausea and vomiting Lethargy Important: Patient-reported outcomes (pain/discomfort, psychological wellbeing)
Exclusion	None
Search strategy	Databases: Medline, Embase, Cochrane Library Date: all years Language: restrict to English only Study designs: RCTs or systematic reviews of RCTs
The review strategy	Quality of life data: collect all data for the stated QoL measure, for meta-analysis and GRADE report only overall scores. Appraisal of methodological quality: the methodological quality of each study will be assessed using NICE checklists and GRADE.  Stratification from outset Age: children (0-17 years); adults (18 years and over) Area of spine: cervical, thoracic, lumbosacral  Sub-groups if between-study heterogeneity exists Children: infant (< 1 year), younger children child (1-12 years), older child / young person(> 12 years) Adults: 18-65 years and > 65 years. Presence of comorbidities (i.e. Ankylosing spondylitis)

## C.13 Information and support

**Table 142: Information and support needs pre-hospital review protocol**

Review question	What information and support do people with suspected traumatic spinal cord/column injury and their families want in the early stages after trauma before a definitive diagnosis has been made?
<b>Objective:</b>	To determine what information and support should be provided to people with suspected traumatic spinal cord/column injury and their families before a definitive diagnosis has been made
<b>Population</b>	Children, young people and adults who present with a suspected spinal injury secondary to a traumatic event, and their family members and/or carers

<b>Review question</b>	<b>What information and support do people with suspected traumatic spinal cord/column injury and their families want in the early stages after trauma before a definitive diagnosis has been made?</b>
<b>Themes</b>	Particular advice to address: Content of information/support required and how this information/support is delivered Information and support to include pain relief Information for carers and family members as well as information for patients Timing of information/support
<b>Exclusion</b>	People with spinal cord or column injury directly caused by a disease process (without a traumatic event) Information after definitive diagnosis of a spinal injury
<b>Search strategy</b>	Databases: Medline, Embase, Cochrane Library, Cinahl Language: restrict to English only Study designs: Qualitative studies (focus group discussions, interviews), cross-sectional surveys and observational studies on patient perceptions
<b>The review strategy</b>	Thematic analysis: information synthesised into themes and sub-themes. Results presented diagrammatically and as narrative. Stratify by age: not applicable Subgroups: none

**Table 143: Information and support needs post diagnosis/pre transfer review protocol**

<b>Review question:</b>	<b>What information and support do people with a confirmed traumatic spinal cord/column injury and their families want in the early stages after trauma before transfer to specialist care?</b>
<b>Objective:</b>	To determine what information and support should be provided to people with a confirmed traumatic spinal cord/column injury and their families before transfer to specialist care
<b>Population</b>	Children, young people and adults with spinal injury (cord and/or column) secondary to a traumatic event, and their family members and/or carers
<b>Themes</b>	Particular advice to address: Content of information/support required and how this information/support is delivered Information and support to include pain relief Information for carers and family members as well as information for patients Timing of information/support
<b>Exclusion</b>	People with spinal cord or column injury directly caused by a disease process (without a traumatic event). Information around the management of traumatic spinal injury after the patient has been accepted by a tertiary centre.
<b>Search strategy</b>	Databases: Medline, Embase, Cochrane Library, Cinahl Language: restrict to English only Study designs: Qualitative studies (focus group discussions, interviews), cross-sectional surveys and observational studies on patient perceptions.
<b>The review strategy</b>	Thematic analysis: information synthesised into themes and sub-themes. Results presented diagrammatically and as narrative. Stratify by age: not applicable Subgroups: none

## C.14 Documentation

**Table 144: Documentation of basic neurological function review protocol**

Review question	What documentation tool should be routinely used to record baseline neurological function in people with spinal injuries?
Objective	To determine documentation tool should be routinely used to record baseline neurological function in people with spinal injuries (including cord, column and penetrating injuries with potential to affect the spine).
Population	Children, young people and adults experiencing a traumatic spinal injury (including cord, column and penetrating injuries with potential to affect the spine).
Intervention	ASIA Frankel Neurological clinical assessment NASCIS Timing of information/support.
Comparison	Standard/usual care
Outcomes	Critical: Mortality at 1, 6 and 12 months Health related quality of life Spinal cord neurological function at 1, 6 and 12 months (including ASIA and Frankel) Important: Patient-reported outcomes (pain/discomfort, return to normal activities, psychological wellbeing).  Population size and directness: No limitations on sample size Studies with indirect populations will not be considered.
Exclusion	People with spinal cord or column injury directly caused by a disease process without a traumatic event. Non-comparative studies.
Search strategy	Databases: Medline, Embase, the Cochrane Library Date: all years Language: restrict to English only Study designs: cohort and case-control
The review strategy	Stratify by age: children (0-17 years), adults (18 and over) Subgroup children by: neonate (<28 days), infant (to 1 year), child (1-15 years), young people(16-17 years) Sub-group adults by: 18- 65 years and > 65 years.  Stratify by area of spine: cervical, thoracic, lumbosacral.

## C.15 Health Economic review protocol

**Table 145: Health economic review protocol**

Review question	All questions – health economic evidence
Objectives	To identify economic evaluations relevant to the review questions set out above.
Criteria	<ul style="list-style-type: none"> <li>Populations, interventions and comparators must be as specified in the individual review protocols above.</li> <li>Studies must be of a relevant economic study design (cost–utility analysis,</li> </ul>

	<p>cost–benefit analysis, cost-effectiveness analysis, cost–consequence analysis, comparative cost analysis).</p> <ul style="list-style-type: none"> <li>• Studies must not be an abstract only, a letter, editorial or commentary, or a review of economic evaluations.<sup>(a)</sup> Unpublished reports will not be considered unless submitted as part of a call for evidence.</li> <li>• Studies must be in English.</li> <li>• Studies must not be published before 1990.</li> </ul>
<b>Search strategy</b>	An economic study search will be undertaken using population-specific terms and an economic study filter – see Appendix E.
<b>Review strategy</b>	<p>Each study fulfilling the criteria above will be assessed for applicability and methodological limitations using the NICE economic evaluation checklist which can be found in Appendix H of the NICE guidelines manual (2014).<sup>2</sup></p> <p><b>Inclusion and exclusion criteria</b></p> <ul style="list-style-type: none"> <li>• If a study is rated as both ‘Directly applicable’ and with ‘Minor limitations’ then it will be included in the guideline. An economic evidence table will be completed and it will be included in the economic evidence profile.</li> <li>• If a study is rated as either ‘Not applicable’ or with ‘Very serious limitations’ then it will usually be excluded from the guideline. If it is excluded then an economic evidence table will not be completed and it will not be included in the economic evidence profile.</li> <li>• If a study is rated as ‘Partially applicable’, with ‘Potentially serious limitations’ or both then there is discretion over whether it should be included.</li> </ul> <p><b>Where there is discretion</b></p> <p>The health economist will make a decision based on the relative applicability and quality of the available evidence for that question, in discussion with the GDG if required. The ultimate aim is to include studies that are helpful for decision-making in the context of the guideline and the current NHS setting. If several studies are considered of sufficiently high applicability and methodological quality that they could all be included, then the health economist, in discussion with the GDG if required, may decide to include only the most applicable studies and to selectively exclude the remaining studies. All studies excluded on the basis of applicability or methodological limitations will be listed with explanation as excluded economic studies in Appendix K.</p> <p>The health economist will be guided by the following hierarchies.</p> <p><i>Setting:</i></p> <ul style="list-style-type: none"> <li>• UK NHS</li> <li>• OECD countries with predominantly public health insurance systems (for example, France, Germany, Sweden)</li> <li>• OECD countries with predominantly private health insurance systems (for example, USA, Switzerland)</li> <li>• non-OECD settings (always ‘Not applicable’).</li> </ul> <p><i>Economic study type:</i></p> <ul style="list-style-type: none"> <li>• cost–utility analysis</li> <li>• other type of full economic evaluation (cost–benefit analysis, cost-effectiveness analysis, cost–consequence analysis)</li> <li>• comparative cost analysis</li> <li>• non-comparative cost analyses including cost-of-illness studies (always ‘Not applicable’).</li> </ul> <p><i>Year of analysis:</i></p>

	<ul style="list-style-type: none"><li>• The more recent the study, the more applicable it is.</li></ul> <p><i>Quality and relevance of effectiveness data used in the economic analysis:</i></p> <ul style="list-style-type: none"><li>• The more closely the effectiveness data used in the economic analysis matches with the outcomes of the studies included in the clinical review the more useful the analysis will be for decision-making in the guideline.</li></ul>
--	--

*(a) Recent reviews will be ordered although not reviewed. The bibliographies will be checked for relevant studies, which will then be ordered.*

\* Non-relevant population, intervention, comparison, design or setting; non-English language

\*\* Note one study compared strategies spanning three questions.

Reasons for exclusion: see Appendix K

## Appendix F: Literature search strategies

### Contents

<b>Introduction</b>	<b>Search methodology</b>
<b>Section F.1</b>	<b>Standard population search strategy</b> This population was used for all search questions unless stated
<b>Section F.2</b>	<b>Study filter terms</b>
F.2.1	Systematic reviews (SR)
F.2.2	Randomized controlled trials (RCT)
F.2.3	Diagnostic accuracy (DIAG)
F.2.4	Prognostic studies (PROG)
F.2.5	Observational studies (OBS)
F.2.6	Health economic studies (HE)
F.2.7	Quality of life studies (QoL)
F.2.8	Economic modelling studies (MOD)
F.2.9	Excluded study designs and publication types
<b>Section F.3</b>	<b>Searches for specific questions with intervention</b> (and population where different from F.1)
F.3.1	Pre-hospital strategies
F.3.2	Destination (immediate)
F.3.3	Diagnostic imaging
F.3.4	Further imaging
F.3.5	Non-imaging
F.3.6	Radiation risk
F.3.7	Dislocation
F.3.8	Stabilisation
F.3.9	Medical interventions
F.3.10	Neuropathic pain
F.3.11	Timing of referral
F.3.12	Tertiary services
F.3.13	Information and support
F.3.14	Documentation
<b>Section F.4</b>	<b>Economic searches</b>
F.4.1	Economic reviews
F.4.2	Quality of life reviews
F.4.3	Radiation risk
<b>0</b>	<b>References</b>

Search strategies used for the trauma spinal injuries guideline are outlined below and were run in accordance with the methodology in the NICE guidelines manual 2012.<sup>1</sup> All searches were run up to 27<sup>th</sup> March 2015, unless otherwise stated. Any studies added to the databases after this date (even if they were published prior to this date) were not included unless specifically stated in the text. We do

not routinely search for electronic, ahead of print or “online early” publications. Where possible searches were limited to retrieve material published in English.

**Table 146: Database date parameters**

Database	Dates searched
Medline	1946 – 27 <sup>th</sup> March 2015
Embase	1974 – 27 <sup>th</sup> March 2015
The Cochrane Library	Cochrane Reviews to 2015 Issue 3 of 12 CENTRAL to 2015 issue 2 of 12 DARE, HTA and NHSEED to 2015 Issue 1 of 4

Searches for the **clinical reviews** were run in Medline (OVID), Embase (OVID), the Cochrane Library (Wiley) and CINAHL (Ebsco).

Searches for intervention and diagnostic studies were usually constructed using a PICO format where population (P) terms were combined with Intervention (I) and sometimes Comparison (C) terms. An intervention can be a drug, a procedure or a diagnostic test. Outcomes (O) are rarely used in search strategies for interventions. Search filters were also added to the search where appropriate.

Searches for prognostic studies were usually constructed combining population terms with prognostic variable terms and sometimes outcomes. Search filters were added to the search where appropriate.

Searches for the health economic reviews were run in Medline (OVID), Embase (OVID), the NHS Economic Evaluations Database (NHS EED) the Health Technology Assessment (HTA) database, the Health Economic Evaluation Database (HEED). The economic searches were run up until 31<sup>st</sup> March 2015 and quality of life searches were run up until 31<sup>st</sup> July 2014. NHS EED and HTA were hosted by the Centre of Reviews and Dissemination (CRD) database. The Health Economic Evaluation Database (HEED) ceased production in 2014 with access ceasing in January 2015. For the final dates of HEED searches, please see individual economic questions. Searches in CRD and HEED were constructed using population terms only, unless otherwise specified. For Medline and Embase an economic filter (instead of a study type filter) was added to the same clinical search strategy.

## F.1 Population search strategies

### Medline search terms

1	exp spinal injuries/
2	exp spinal cord injuries/
3	spinal cord compression/
4	exp neck injuries/
5	((spine or spinal or vertebr* or neck or cervical or lumbar or sacral or thoracic or cord or whiplash) adj2 (injur* or damag* or trauma* or fracture* or compress* or contus* or lacerat* or transect* or lesion*)).ti,ab.
6	(central cord syndrome or central spinal cord syndrome).ti,ab.
7	(conus medullaris syndrome* or cauda equina syndrome*).ti,ab.
8	or/1-7

### Embase search terms

1	exp spine injury/
---	-------------------

2	neck injury/ or whiplash injury/
3	exp spinal cord injury/
4	((spine or spinal or vertebr* or neck or cervical or lumbar or sacral or thoracic or cord or whiplash) adj2 (injur* or damag* or trauma* or fracture* or compress* or contus* or lacerat* or transect* or lesion*)):ti,ab.
5	(central cord syndrome or central spinal cord syndrome).ti,ab.
6	(conus medullaris syndrome* or cauda equina syndrome*).ti,ab.
7	or/1-6

#### Cochrane search terms

#1	MeSH descriptor: [spinal injuries] explode all trees
#2	MeSH descriptor: [spinal cord injuries] explode all trees
#3	MeSH descriptor: [spinal cord compression] this term only
#4	MeSH descriptor: [neck injuries] explode all trees
#5	((spine or spinal or vertebr* or neck or cervical or lumbar or sacral or thoracic or cord or whiplash) near/2 (injur* or damag* or trauma* or fracture* or compress* or contus* or lacerat* or transect* or lesion*)):ti,ab,kw
#6	(central cord syndrome or central spinal cord syndrome):ti,ab,kw
#7	(conus medullaris syndrome or cauda equina syndrome):ti,ab,kw
#8	{or #1-#7}

#### CINAHL search terms

S1	(MH "spinal injuries+")
S2	(MH "spinal cord injuries+")
S3	(MH "spinal cord compression")
S4	(MH "neck injuries+")
S5	TX (spine or spinal or vertebr* or neck or cervical or cord or whiplash) and (injur* or trauma* or fracture*)
S6	S1 or S2 or S3 or S4 or S5

#### CRD search terms

#1	MeSH descriptor spinal injuries explode all trees
#2	MeSH descriptor spinal cord injuries explode all trees
#3	MeSH descriptor spinal cord compression
#4	MeSH descriptor neck injuries explode all trees
#5	((spine or spinal or vertebr* or neck or cervical or lumbar or sacral or thoracic or cord or whiplash) near2 (injur* or damag* or trauma* or fracture* or compress* or contus* or lacerat* or transect* or lesion*))
#6	((central adj cord adj syndrome or central adj spinal adj cord adj syndrome))
#7	((conus adj medullaris adj syndrome or cauda adj equina adj syndrome))
#8	#1 or #2 or #3 or #4 or #5 or #6 or #7

#### HEED search terms

1	searching article title: ((spine or spinal or vertebr* or neck or cervical or lumbar or sacral or thoracic or cord or whiplash) and (injur* or damag* or trauma* or fracture* or compress* or contus* or lacerat* or transect* or lesion*))
2	searching abstract: ((spine or spinal or vertebr* or neck or cervical or lumbar or sacral or thoracic or cord or whiplash) and (injur* or damag* or trauma* or fracture* or compress* or contus* or lacerat* or transect* or lesion*))

3	1 or 2
---	--------

## F.2 Study filter search terms

### F.2.1 Systematic review (SR) search terms

#### Medline search terms

1	meta-analysis/
2	meta-analysis as topic/
3	(meta analy* or metanaly* or metaanaly* or meta regression).ti,ab.
4	((systematic* or evidence*) adj2 (review* or overview*)).ti,ab.
5	(reference list* or bibliograph* or hand search* or manual search* or relevant journals).ab.
6	(search strategy or search criteria or systematic search or study selection or data extraction).ab.
7	(search* adj4 literature).ab.
8	(medline or pubmed or cochrane or embase or psychlit or psyclit or psychinfo or psycinfo or CINAHL or science citation index or bids or cancerlit).ab.
9	cochrane.jw.
10	((multiple treatment* or indirect or mixed) adj2 comparison*).ti,ab.
11	or/1-10

#### Embase search terms

1	systematic review/
2	meta-analysis/
3	(meta analy* or metanaly* or metaanaly* or meta regression).ti,ab.
4	((systematic or evidence) adj2 (review* or overview*)).ti,ab.
5	(reference list* or bibliograph* or hand search* or manual search* or relevant journals).ab.
6	(search strategy or search criteria or systematic search or study selection or data extraction).ab.
7	(search* adj4 literature).ab.
8	(medline or pubmed or cochrane or embase or psychlit or psyclit or psychinfo or psycinfo or CINAHL or science citation index or bids or cancerlit).ab.
9	cochrane.jw.
10	((multiple treatment* or indirect or mixed) adj2 comparison*).ti,ab.
11	or/1-10

### F.2.2 Randomised controlled studies (RCTs) search terms

#### Medline search terms

1	randomized controlled trial.pt.
2	controlled clinical trial.pt.
3	randomi#ed.ab.
4	placebo.ab.
5	randomly.ab.
6	clinical trials as topic.sh.
7	trial.ti.
8	or/1-7

### Embase search terms

1	random*.ti,ab.
2	factorial*.ti,ab.
3	(crossover* or cross over*).ti,ab.
4	((doubl* or singl*) adj blind*).ti,ab.
5	(assign* or allocat* or volunteer* or placebo*).ti,ab.
6	crossover procedure/
7	single blind procedure/
8	randomized controlled trial/
9	double blind procedure/
10	or/1-9

### F.2.3 Diagnostic accuracy (DIAG) search terms

Lines 11 and 12 (Medline) and 12 and 13 (Embase) were used in question F.3.3 only.

#### Medline search terms

1	exp "sensitivity and specificity"/
2	(sensitivity or specificity).ti,ab.
3	((pre test or pretest or post test) adj probability).ti,ab.
4	(predictive value* or ppv or npv).ti,ab.
5	likelihood ratio*.ti,ab.
6	likelihood function/
7	(roc curve* or auc).ti,ab.
8	(diagnos* adj2 (performance* or accurac* or utilit* or value* or efficien* or effectiveness)).ti,ab.
9	gold standard.ab.
10	or/1-9
11	(di or ra).fs.
12	10 or 11

#### Embase search terms

1	exp "sensitivity and specificity"/
2	(sensitivity or specificity).ti,ab.
3	((pre test or pretest or post test) adj probability).ti,ab.
4	(predictive value* or ppv or npv).ti,ab.
5	likelihood ratio*.ti,ab.
6	(roc curve* or auc).ti,ab.
7	(diagnos* adj2 (performance* or accurac* or utilit* or value* or efficien* or effectiveness)).ti,ab.
8	diagnostic accuracy/
9	diagnostic test accuracy study/
10	gold standard.ab.
11	or/1-10
12	(di or ra).fs.
13	11 or 12

## F.2.4 Prognostic (PROG) search terms

### Medline search terms

1	predict.ti.
2	(validat* or rule*).ti,ab.
3	(predict* and (outcome* or risk* or model*)).ti,ab.
4	((history or variable* or criteria or scor* or characteristic* or finding* or factor*) and (predict* or model* or decision* or identif* or prognos*)).ti,ab.
5	decision*.ti,ab. and logistic models/
6	(decision* and (model* or clinical*)).ti,ab.
7	(prognostic and (history or variable* or criteria or scor* or characteristic* or finding* or factor* or model*)).ti,ab.
8	(stratification or discrimination or discriminate or c statistic or "area under the curve" or auc or calibration or indices or algorithm or multivariable).ti,ab.
9	roc curve/
10	or/1-9

### Embase search terms

1	predict.ti.
2	(validat* or rule*).ti,ab.
3	(predict* and (outcome* or risk* or model*)).ti,ab.
4	((history or variable* or criteria or scor* or characteristic* or finding* or factor*) and (predict* or model* or decision* or identif* or prognos*)).ti,ab.
5	decision*.ti,ab. and statistical model/
6	(decision* and (model* or clinical*)).ti,ab.
7	(prognostic and (history or variable* or criteria or scor* or characteristic* or finding* or factor* or model*)).ti,ab.
8	(stratification or discrimination or discriminate or c statistic or "area under the curve" or auc or calibration or indices or algorithm or multivariable).ti,ab.
9	receiver operating characteristic/
10	or/1-9

## F.2.5 Observational studies (OBS) search terms

### Medline search terms

1	epidemiologic studies/
2	exp case control studies/
3	exp cohort studies/
4	cross-sectional studies/
5	case control.ti,ab.
6	(cohort adj (study or studies or analys*)).ti,ab.
7	((follow up or observational or uncontrolled or non randomi#ed or nonrandomi#ed or epidemiologic*) adj (study or studies)).ti,ab.
8	((longitudinal or retrospective or prospective or cross sectional) and (study or studies or review or analys* or cohort*)).ti,ab.
9	or/1-8

### Embase search terms

1	clinical study/
2	exp case control study/
3	family study/
4	longitudinal study/
5	retrospective study/
6	prospective study/
7	cross-sectional study/
8	cohort analysis/
9	follow-up/
10	cohort*.ti,ab.
11	9 and 10
12	case control.ti,ab.
13	(cohort adj (study or studies or analys*)).ti,ab.
14	((follow up or observational or uncontrolled or non randomi#ed or nonrandomi#ed or epidemiologic*) adj (study or studies)).ti,ab.
15	((longitudinal or retrospective or prospective or cross sectional) and (study or studies or review or analys* or cohort*)).ti,ab.
16	or/1-8,11-15

## F.2.6 Health economic (HE) search terms

### Medline search terms

1	economics/
2	value of life/
3	exp "costs and cost analysis"/
4	exp economics, hospital/
5	exp economics, medical/
6	economics, nursing/
7	economics, pharmaceutical/
8	exp "fees and charges"/
9	exp budgets/
10	budget*.ti,ab.
11	cost*.ti.
12	(economic* or pharmaco?economic*).ti.
13	(price* or pricing*).ti,ab.
14	(cost* adj2 (effective* or utilit* or benefit* or minimi* or unit* or estimat* or variable*)).ab.
15	(financ* or fee or fees).ti,ab.
16	(value adj2 (money or monetary)).ti,ab.
17	or/1-16

### Embase search terms

1	health economics/
2	exp economic evaluation/
3	exp health care cost/
4	exp fee/

5	budget/
6	funding/
7	budget*.ti,ab.
8	cost*.ti.
9	(economic* or pharmaco?economic*).ti.
10	(price* or pricing*).ti,ab.
11	(cost* adj2 (effective* or utilit* or benefit* or minimi* or unit* or estimat* or variable*)).ab.
12	(financ* or fee or fees).ti,ab.
13	(value adj2 (money or monetary)).ti,ab.
14	or/1-14

## F.2.7 Quality of life (QOL) search terms

### Medline search terms

1	quality-adjusted life years/
2	sickness impact profile/
3	(quality adj2 (wellbeing or well being)).ti,ab.
4	sickness impact profile.ti,ab.
5	disability adjusted life.ti,ab.
6	(qal* or qtime* or qwb* or daly*).ti,ab.
7	(euroqol* or eq5d* or eq 5*).ti,ab.
8	(qol* or hql* or hqol* or h qol* or hrqol* or hr qol*).ti,ab.
9	(health utility* or utility score* or disutilit* or utility value*).ti,ab.
10	(hui or hui1 or hui2 or hui3).ti,ab.
11	(health* year* equivalent* or hye or hyes).ti,ab.
12	discrete choice*.ti,ab.
13	rosser.ti,ab.
14	(willingness to pay or time tradeoff or time trade off or tto or standard gamble*).ti,ab.
15	(sf36* or sf 36* or short form 36* or shortform 36* or shortform36*).ti,ab.
16	(sf20 or sf 20 or short form 20 or shortform 20 or shortform20).ti,ab.
17	(sf12* or sf 12* or short form 12* or shortform 12* or shortform12*).ti,ab.
18	(sf8* or sf 8* or short form 8* or shortform 8* or shortform8*).ti,ab.
19	(sf6* or sf 6* or short form 6* or shortform 6* or shortform6*).ti,ab.
20	(upper limb functional index or ulfi or lower limb functional index or llfi).ti,ab,ot.
21	or/1-20

### Embase search terms

1	quality adjusted life year/
2	"quality of life index"/
3	short form 12/ or short form 20/ or short form 36/ or short form 8/
4	sickness impact profile/
5	(quality adj2 (wellbeing or well being)).ti,ab.
6	sickness impact profile.ti,ab.
7	disability adjusted life.ti,ab.
8	(qal* or qtime* or qwb* or daly*).ti,ab.

9	(euroqol* or eq5d* or eq 5*).ti,ab.
10	(qol* or hql* or hqol* or h qol* or hrqol* or hr qol*).ti,ab.
11	(health utility* or utility score* or disutilit* or utility value*).ti,ab.
12	(hui or hui1 or hui2 or hui3).ti,ab.
13	(health* year* equivalent* or hye or hyes).ti,ab.
14	discrete choice*.ti,ab.
15	rosser.ti,ab.
16	(willingness to pay or time tradeoff or time trade off or tto or standard gamble*).ti,ab.
17	(sf36* or sf 36* or short form 36* or shortform 36* or shortform36*).ti,ab.
18	(sf20 or sf 20 or short form 20 or shortform 20 or shortform20).ti,ab.
19	(sf12* or sf 12* or short form 12* or shortform 12* or shortform12*).ti,ab.
20	(sf8* or sf 8* or short form 8* or shortform 8* or shortform8*).ti,ab.
21	(sf6* or sf 6* or short form 6* or shortform 6* or shortform6*).ti,ab.
22	(upper limb functional index or ulfi or lower limb functional index or llfi).ti,ab,ot.
23	or/1-22

## F.2.8 Economic modelling (MOD) search terms

### Medline search terms

1	exp models, economic/
2	*models, theoretical/
3	*models, organizational/
4	markov chains/
5	monte carlo method/
6	exp decision theory/
7	(markov* or monte carlo).ti,ab.
8	econom* model*.ti,ab.
9	(decision* adj2 (tree* or analy* or model*)).ti,ab.
10	or/1-9

### Embase search terms

1	statistical model/
2	exp economic aspect/
3	1 and 2
4	*theoretical model/
5	*nonbiological model/
6	stochastic model/
7	decision theory/
8	decision tree/
9	monte carlo method/
10	(markov* or monte carlo).ti,ab.
11	econom* model*.ti,ab.
12	(decision* adj2 (tree* or analy* or model*)).ti,ab.
13	or/3-12

## F.2.9 Excluded study designs and publication types

The following study designs and publication types were removed from retrieved results using the NOT operator. This filter was used in all searches.

### Medline search terms

1	letter/
2	editorial/
3	news/
4	exp historical article/
5	anecdotes as topic/
6	comment/
7	case report/
8	(letter or comment*).ti.
9	or/1-8
10	randomized controlled trial/ or random*.ti,ab.
11	9 not 10
12	animals/ not humans/
13	exp animals, laboratory/
14	exp animal experimentation/
15	exp models, animal/
16	exp rodentia/
17	(rat or rats or mouse or mice).ti.
18	or/11-17

### Embase search terms

1	letter.pt. or letter/
2	note.pt.
3	editorial.pt.
4	case report/ or case study/
5	(letter or comment*).ti.
6	or/1-5
7	randomized controlled trial/ or random*.ti,ab.
8	6 not 7
9	animal/ not human/
10	nonhuman/
11	exp animal experiment/
12	exp experimental animal/
13	animal model/
14	exp rodent/
15	(rat or rats or mouse or mice).ti.
16	or/8-15

### CINAHL search terms

1	PT anecdote or PT audiovisual or PT bibliography or PT biography or PT book or PT book review or PT brief item or PT cartoon or PT commentary or PT computer program or PT editorial or PT games or PT glossary or PT historical material or PT interview or PT letter or PT
---	--

	listservs or PT masters thesis or PT obituary or PT pamphlet or PT pamphlet chapter or PT pictorial or PT poetry or PT proceedings or PT "questions and answers" or PT response or PT software or PT teaching materials or PT website
--	---

## F.3 Searches by specific questions

### F.3.1 Pre-hospital strategies

1. What pre-hospital strategies to protect the spine in people with suspected traumatic spinal injury are the most clinically and cost effective during transfer from the scene of the incident to acute medical care?

Search constructed by combining the columns in the following table using the AND Boolean operator

Population	Intervention / exposure	Comparison	Study filter used	Date parameters
Expanded spinal injury population. Detailed with intervention terms below	Spinal protection		The following filters were used in Medline and Embase only: RCT, SR	See <b>Error! eference source not found.</b> English only Exclusion filter applied in Medline and Embase

#### Medline search terms

1	exp spinal injuries/
2	exp spinal cord injuries/
3	spinal cord compression/
4	exp neck injuries/
5	(spine* or spinal or vertebr* or cervical or cord or whiplash).ti,ab.
6	or/1-5
7	exp immobilization/
8	exp transportation of patients/
9	splints/ or braces/ or stretchers/
10	(backboard* or back board* or spineboard* or spine board* or spinal board* or longboard* or long board* or stretcher* or stretch board* or trolley* or stretchboard* or rescue board* or ortho stretcher* or orthostretcher* or short board* or shortboard* or fracture board* or fractureboard* or wood* board or foam board* or foamboard* or patslide* or ked* or kendrick or gurney* or litter* or aquaboard* or aqua board* or scoop*).ti,ab.
11	collar*.ti,ab.
12	((vacuum or air) adj2 (splint* or mattress* or immobili*)).ti,ab.
13	(mattress* adj2 (splint* or spine or spinal or immobili*)).ti,ab.
14	(headblock* or head block* or sandbag* or sand bag*).ti,ab.
15	(strapping or strapped or straps or tapes or taping or pads or padding).ti,ab.
16	patient positioning/
17	"moving and lifting patients"/
18	(neutral position* or log roll* or logroll*).ti,ab.
19	(lift* adj2 (slide or vertical or straddle or translation or dutch or spoon)).ti,ab.
20	((casualt* or patient*) adj3 (evacuat* or move* or moving or lift* or transport* or position* or carry*)).ti,ab.

21	((extricat* or immobili* or mobili* or stabili* or ortho* or protect*) adj3 (technique* or device* or strateg* or method*)).ti,ab.
22	((spine or spinal or head or neck or trauma or cervical or manual) adj3 (stabili* or immobili* or protection or extricat* or align* or restrain*)).ti,ab.

### F.3.3 Diagnostic imaging

Searches for the following two questions were run as one search:

3. What is the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy), iii) CT and iv) MRI for people with traumatic spinal cord injury (with or without column injury)?
4. What is the diagnostic accuracy of i) X-ray, ii) dynamic fluoroscopy), iii) CT and iv) MRI for people with traumatic spinal column injury alone?

Search constructed by combining the columns in the following table using the AND Boolean operator

Population	Interventions / exposure	Comparison	Study filter used	Date parameters
Modified spinal injuries population to exclude neck fractures	Imaging techniques		The following filters were used in Medline and Embase only: Expanded DIAG combined with OBS or RCT or SR See note in F.2.3	See Table 1 English only Exclusion filter applied in Medline and Embase

### F.3.12 Tertiary services

14. What are the clinical factors associated with a positive outcome after transfer to an SCIC for patients with spinal trauma?

Search constructed by combining the columns in the following table using the AND Boolean operator

Population	Intervention / exposure	Comparison	Study filter used	Date parameters
Spinal injury	Transfer/acceptance to SCIC		The following filters were used in Medline and Embase only: OBS, PROG, SR	See Table 1 English only Exclusion filter applied in Medline and Embase

## F.4 Economics searches

### F.4.1 Health economics

Economic searches were conducted in Medline, Embase, HEED and CRD for NHS EED and HTA.

Population	Intervention / exposure	Comparison	Study filter used	Date parameters
Spinal injuries			The following filters were used in Medline and Embase only: HE, MOD	Medline and Embase: 2011 – 31 <sup>st</sup> March 2015 CRD: All dates – 31 <sup>st</sup> March 2015 HEED: All dates – 30 <sup>th</sup> July 2014 English only Exclusion filter applied in Medline and Embase

### F.4.2 Quality of life

Searches for quality of life data were run in Medline (OVID) and Embase (OVID).

Search constructed by combining the columns in the following table using the AND Boolean operator

Population	Intervention / exposure	Comparison	Study filter used	Date parameters
Spinal injuries			The following filters were used in Medline and Embase only: QoL	Medline and Embase: 2011 – 31 <sup>st</sup> July 2014 English only Exclusion filter applied in Medline and Embase

### F.4.3 Radiation risk

18. For people with clinical signs of spinal injury what are the radiation risks of having a x-ray(s) and/or CT scans?

These searches were conducted in Medline, Embase, HEED and Cochrane Library for NHS EED and HTA.

Population	Intervention / exposure	Comparison	Study filter used	Date parameters
------------	-------------------------	------------	-------------------	-----------------

Population	Intervention / exposure	Comparison	Study filter used	Date parameters
No population	X-ray or CT		The following filters were used in Medline and Embase only: HE	Medline and Embase: 2011 – 31 <sup>st</sup> March 2015 Cochrane NHSEED and HTA: All years –2015 Issue 1 of 4 HEED: All dates – 30 <sup>th</sup> July 2014
