

Economic plan

This plan identifies the areas prioritised for economic modelling. The final analysis may differ from those described below. The rationale for any differences will be explained in the guideline.

1 Guideline

Pre-operative tests

2 List of modelling questions

Systematic reviewing for clinical evidence was not undertaken for pregnancy testing, chest x-rays, haemostasis tests, urine tests, pregnancy tests and sickle cell disease/traits tests. Therefore economic modelling was not considered for these tests but was considered for all other tests being evaluated.

No economic modelling was undertaken due to the lack of any appropriate clinical evidence.
