

2.0 Scope: after consultation (To be completed by the developer and submitted with the final scope)

2.1 Have any potential equality issues been identified during consultation, and, if so, what are they?

Co-medical conditions.
Preventative action
Outcomes for families.
Inclusiveness of all eating disorders (i.e. avoidant/restrictive food intake disorder ARFID)
Age groups
Gender
Ethnicity
Geographical location

2.2 Have any changes to the scope been made as a result of consultation to highlight potential equality issues?

Equality issues identified during the scoping process including consultation were addressed by the Committee. See comments below:
The guideline will look at comorbidities, as outlined in section 1.3-4. However, the inclusion of other medical conditions (i.e. leukaemia) would have significant resource implications and are therefore unable to be included in the scope.

- We agree prevention and awareness are important issues however the resource implications of including these areas are significant and as such we are unable to extend the scope.
- Outcomes for the families are now included
- Avoidant/restrictive food intake disorder (ARFID) is a new diagnostic category with little evidence so it is not included in the scope.
- Evidence for children, young people and adults are included.

Gender and ethnic related differences in the response to treatment will be considered.

- We are aware of geographical barriers influencing access to care (i.e. students moving away from home) and will address issues relating to the organisation and delivery of services in the guideline (section 1.5.2).

2.3 Is the primary focus of the guideline a population with a specific disability-related communication need?

If so, is an alternative version of the 'Information for the Public' document recommended?

If so, which alternative version is recommended?

The alternative versions available are:

- large font or audio versions for a population with sight loss;
- British Sign Language videos for a population who are deaf from birth;
- 'Easy read' versions for people with learning disabilities or cognitive impairment.
