

Appendix A: How this guideline was developed

This guideline was developed in accordance with the process and methods set out in [Developing NICE guidelines: the manual](#).

The review questions used to develop the guideline were as follows:

1. Home based intermediate care:

1a. What is the effectiveness and cost effectiveness of home based intermediate care?

1b. What are the views and experiences of people using services and their carers in relation to home based intermediate care?

1c. What are the views and experiences of health, social care and other practitioners about home based intermediate care?

2. Bed based intermediate care (in hospital or residential settings):

2a. What is the effectiveness and cost effectiveness of bed based intermediate care?

2b. What are the views and experiences of people using services and their carers in relation to bed based intermediate care?

2c. What are the views and experiences of health, social care and other practitioners about bed based intermediate care?

3. Crisis response – intermediate care:

3a. What is the effectiveness and cost effectiveness of crisis response?

3b. What are the views and experiences of people using services and their carers in relation to crisis response?

3c. What are the views and experiences of health, social care and other practitioners about crisis response?

4. Reablement:

4(a) What is the effectiveness and cost effectiveness of reablement?

4(b) What are the views and experiences of people using services and their carers in relation to reablement?

4(c) What are the views and experiences of health, social care and other practitioners about reablement?

5. Intermediate care and reablement for people living with dementia:

5(a) What is the effectiveness and cost effectiveness of intermediate care and reablement for people living with dementia?

5(b) What are the views and experiences of people living with dementia and carers about intermediate care and reablement?

5(c) What are the views and experiences of health, social care and other practitioners about intermediate care and reablement for people living with dementia?

6. Information, advice, advocacy, training and support:

6(a) What is the effectiveness and cost effectiveness of information, advice, advocacy, training and support for people using intermediate care and reablement?

6(b) What are the views and experiences of people using intermediate care and reablement, and their families and carers, about information, advice, advocacy, training and support?

6(c) What are the views and experiences of health, social care and other practitioners about information, advice, advocacy, training and support for people using intermediate care and reablement and their families and carers?

7(a) What characteristics of intermediate care and reablement service models and approaches are associated with improving outcomes for adults using these services and their families?

7(b) What do adults using intermediate and reablement care services, their carers and families consider to be the important characteristics of service models and approaches?

7(c) What do health, social care and other practitioners consider are the important characteristics of intermediate care and reablement service models and approaches?

Search strategies

The evidence reviews used to develop the guideline recommendations were underpinned by systematic literature searches, following the methods described in [Developing NICE guidelines: the manual](#). The aim of the systematic searches was to comprehensively identify the published evidence to answer the review questions developed by the Guideline Development Group and NICE Collaborating Centre for Social Care.

The search strategies for the review questions were developed by the NICE Collaborating Centre for Social Care. Structured questions were developed using an appropriate framework, for example PICO or SPICE, and translated into search strategies using subject heading and free text terms. The strategies were run across a number of databases and sources.

Economic evidence was searched by using a variety of databases, for example: the NHS Economic Evaluation Database (NHS EED) and the Cochrane Database of Systematic Reviews and ECONLIT which contain economic reviews.

Search filters were devised for some of the questions, to manage the number of results along with obtaining specific types and quality of data (study types, cost effectiveness / economics and views / experiences), existing NICE search filters were adapted to describe and collect terminology relevant to social care.

Guideline Development Group members were also asked to alert the NICE Collaborating Centre for Social Care to any additional evidence, published, unpublished or in press, that met the inclusion criteria.

The searches were undertaken between October 2015 and July 2016, including the update searches.

Overall contextual search approaches

The review search utilised both systematic and mapping approaches, across each individual question, requiring a number of approaches to manage the size of the overall data and to provide precision and sensitivity where possible. This section briefly explains the challenges surrounding the broadness of the general topic area within rehabilitation and intermediate care, countered with challenges in the brevity of settings, which included housing or health and the criminal justice system, counter-balanced with terms such as reablement and dementia that are more condition or intervention specific. Service definitions from the National Audit for Intermediate care provided some focus through specific service type definitions such as home based, bed-based and crisis response, however we undertook various approaches in both the search, such as study filters, along with management of the data, such as de-duplication of similar sets of data for each question, to limit the number of studies obtained from the potentially vast mixture of broad and focused searches which are explained in more detail below.

Searches for this topic covered broad areas such as rehabilitation, intermediate care and occupational therapy, settings such as hospital, home, nursing, specialist units and study types such as systematic reviews, meta-analysis and qualitative data. A variety of searching, screening and reference management approaches were employed such as study type search filters, searching and screening within the data collection, duplicate reference management along with additional expert testimony and citation harvesting.

Key themes and terms

Intermediate care in the context of the reviews was understood to mean, care that is in-between different parts of a wider system. This required terms that covered: both a setting (intermediate care: units, wards, facilities and centres etc.) and a type of care delivery (intermediate care services, teams and assessments etc.) which are delivered by a variety professionals within multi-disciplinary teams, from across the health and social care sector. Intermediate care services are located in the acute (hospital), community, nursing and residential settings, as well as being based in a

private residence such as the home (home care). What differentiates Intermediate care from other forms of rehabilitation is its duration, which is limited to short-term or brief intervention, or limited by time, such as six to eight weeks for reablement, or two working days for crisis response.

Rehabilitation in the context of the reviews was understood to mean, the restoration and recovery of the individual to an independent state of functioning. This required terms that covered rehabilitation as a main subject along with terms for occupational and physiotherapy across the same variety of settings outlined above. The concept of regaining independence required additional terms that considered outcomes such as activities of daily living or individual recovery goals and outcomes.

Additional terms such as step-up and step-down services, hospital at home, delayed discharges, transitional care and integrated care were sought to gather information from areas potentially classed as in-between care situations from within the literature.

Review search approaches

We designed search strategies for each review question by formulating the individual review protocols by considering the needs of the scope and the review questions, along with the service category definitions in the National Audit for Intermediate Care (2015). We enlisted various methods to maximise sensitivity and precision within the data yield by conducting a variety of filtered and mapping searches, across the different review questions

In review questions one and two (home and bed-based), search filters were utilised to limited study types such as: systematic reviews, meta-analysis, randomised controlled trials, cost effectiveness and qualitative reviews. We combined these with a core search approach, to control the precision of yield from within the largest element of the search strategy, the core subjects areas of: rehabilitation, intermediate care, occupational therapy and physiotherapy. Finally we combined terms related to both outcomes and time limits, as expressed by the included definitions within the National Audit for Intermediate care, along with terms surrounding the particular setting (home or bed-based) and date limits for each question.

Within the production of the protocol for review three, the Information Scientist identified that the definition of crisis response from within the audit, did not represent the majority of the data classified as: crisis response or intervention and rapid response or intervention, within the intended search sources. It was recommended that this area be supported by a subject witness along with applying a study type filter (as above) to a core broad coverage search strategy covering: crises that need immediate responses from a variety of multi-agency professional in a variety of settings, to ensure all potentially relevant studies were identified. This was limited by the use of a study type filter along with limiting studies to specific settings such as residential, home and acute locations and time limits.

Due to the lack of specific data on the NAIC service definition of crisis response, four broad search groups were devised: search one captured immediate (rapid or crisis) responses and needs in any setting but restricted by time limits and date, search two captured immediate (rapid or crisis) responses and needs in combination with assessment or referral but restricted by time limits and date, search three captured immediate (rapid or crisis) responses and needs in any settings combined with different professional groups but restricted by time limits and date, search four captured immediate (rapid or crisis) response and needs in any setting in combination with types of activity and outcome but restricted by time and date limits.

National Audit for Intermediate care (2015) - Appendix 3: Service category definitions
Service: Crisis response

- Setting: Community based services provided to service users in their own home or care home.
- Aim: Assessment and short term interventions to avoid hospital admission.
- Period: Interventions for the majority of service users will last up to 48 hours or two working days (if longer interventions are provided the service should be included under home based IC).
- Work force: Multi-disciplinary teams but predominantly health professionals.
- Includes: Intermediate care assessment teams, rapid response and crisis resolution.

- Excludes: Mental health crisis resolution services, community matrons / active case management teams.

Review four consisted of searches on the specific intervention of reablement, as this data set was discrete. Additional related terms were used to increase the yield such as restorative care, enablement and home independence programmes, to create the first search set. We then created a second search set seeking to extract relevant data from the broad rehabilitation, intermediate care, homecare and community care data sets. We then combined the resulting set with time-limited terms such as: six weeks, brief or short term and finally the second set was combined with the first reablement set and then limited by age factors and language. We did not limit by date, or study type, to ensure the highest yield of data was collected. We also undertook reference harvesting of studies identified in the review protocol development.

In review five we created a dementia set (1) a reablement set (2) along with terms for intermediate care to ensure we gathered a broad yield of data on dementia and intermediate care. A rehabilitation set (3) was combined with time and measure limits. The reablement set and rehabilitation set were kept discrete sets by using the OR operator. Finally we combined the two OR search sets (2 & 3) with the dementia set (1). As with review four we did not limit by date, or study type, to ensure the highest yield of data was collected.

A broad communication search strategy for review six was devised, capturing data on information, advice, advocacy or training and support. We combined three broad datasets: rehabilitation, education and information communication formats. We combined terms for rehabilitation and information and limited by date to create the final data set. The collection was not bound by the definitions within the Audit for Intermediate Care, meaning time-limits that may have provided more focused limited results were not possible to use. Within the test searches for the review protocol we identified that the search needed to be broad enough to capture a variety of related concepts such as self-help in rehabilitation along with advocacy and decision making but we also identified that the subject matter may be found more in the qualitative

area of research, so search filters for study types were tested but issues combining study type filters with publication type searches, deemed them unsuitable for use in this combined field.

The seventh review question was added after all questions (including the update search) had been completed. Terms for intermediate care were consistently used across all of the existing review questions and therefore no new search strategy was created to answer the review question. Reviewers searched within the existing data from all reviews on intermediate care, in a combined reference management review library. The Information Specialist provided additional searches on audits of intermediate care and rehabilitation, to supplement existing review data.

The mapping update searches covered all questions for a one year date period which involved a broad search group on rehabilitation combined with a study type filter and limited by date. This sought to collect a mapped collection of specific studies, that may have been missed by previous individual question focused searches, by creating a sensitive (study type) data set which provided a short-term check and balance, to ensure all relevant studies within those groups had been collected, across all database sources for the whole review.

For more detailed explanation on the searches detailed above, please visit Appendix A for more information.

Scoping searches

Scoping searches were undertaken in January 2015, using the following websites and databases (listed in alphabetical order); browsing or simple search strategies were employed. The search results were used to provide information for scope development and project planning.

Databases	Organisational websites	NICE guidelines (existing)
Centre for Reviews and Dissemination (CRD) Databases; DARE, NHS EDD, HTA, PROSPERO	AgeUK	NICE Guideline CG42

Database of promoting health effectiveness reviews (DoPHER) - EPPI Centre	Care Quality Commission (CQC)	NICE Guideline CG83

Systematic review searches

Review question 1 - Home based (Intermediate Care)

Conducted in October 2015, the home based search strategy was formulated to answer questions about Intermediate Care in the home or community setting.

Questions

- What is the effectiveness and cost effectiveness of home based intermediate care?
- What are the views and experiences of people using services, their families and carers in relation to home based intermediate care?
- What are the views and experiences of health, social care and other practitioners about home based intermediate care?

Databases:

- Abstracts in Social Gerontology
- Allied and Complementary Medicine Database (AMED)
- Applied Social Sciences Index and Abstracts (ASSIA)
- Cochrane Database of Systematic Reviews
- Cumulative Index to Nursing and Allied Health Literature (CINAHL)
- Excerpta Medica database (Embase)
- Medical Literature Analysis and Retrieval System Online (MEDLINE)
- Social Care Online (SCO)
- Social Policy and Practice (SPP)
- Social Work Abstracts
- SocINDEX

Organisation and academic sources:

- Personal Social Services Research Unit (PSSRU)
- Prevention Library (SCIE)
- Price Waterhouse Cooper (PWC)
- Rehabdata
- Social Policy Research Unit (SPRU)
- The King's Fund
- York health Economics Consortium

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms around the requirements of the Scope, Appendix 3: Service category definitions, of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

Due to the quantity of data on rehabilitation, three individual 'study type' filters were adapted to collect the following study types: systematic reviews and randomised controlled trials along with qualitative information surrounding service users', carers and professionals' views and experiences.

Study Filters

1. Study Filter (SF1) Systematic reviews, meta-analysis, non-randomised or randomised controlled trials, trials, case control or cohort or cross-sectional studies
2. Study Filter (SF2) Cost effectiveness, economics
3. Study Filter (SF3) Qualitative studies or views and experiences (users, carers, professionals)

The individual study filters were combined with the following core search approach:

- A: Intervention (rehabilitative or intermediate care etc.)
- B: Outcomes (recovery or maintaining or regaining independence)
- C: Duration (time, week, short, brief etc.)
- D: Setting or services (Home based settings, intermediate, housing, nursing and residential care settings)
- E: Language and date limits (English, 2005-2015)

Some database searches were limited to the core search approach and were adapted to the design of each individual database and provider platform.

Organisation and additional searches

Terms frequently used within the organisation searches for home based intermediate care consisted of: intermediate care, rehabilitation combined with home based or time and regaining independence. Relevant PDF's were then searched within, to clarify the relevance to the specific question.

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews or qualitative data.

All searches: RQ1 (A, B, C) - Home based Intermediate Care

RQ2. Bed-based Intermediate Care (hospital, nursing, residential settings)

Conducted in October 2015, the bed-based search strategy was formulated to answer questions about Intermediate Care in acute (hospital) or nursing or the community setting.

Questions

- What is the effectiveness and cost effectiveness of bed-based intermediate care?
- What are the views and experiences of people using services, their families and carers in relation to bed-based intermediate care?
- What are the views and experiences of health, social care and other practitioners about bed-based intermediate care?

Databases

- Abstracts in Social Gerontology
- British Nursing Index (BNI)
- Cumulative Index to Nursing and Allied Health Literature (CINAHL)
- Health Management Information Consortium (HMIC)
- Medical Literature Analysis and Retrieval System Online (MEDLINE)
- National Rehabilitation Information Center (NARIC)
- OT Seeker
- ProQuest Hospital Collection
- Social Policy and Practice (SPP)
- SocINDEX

Organisational Websites

- NHS England
- College of Occupational Therapists (COT)
- Royal College of Physicians (RCP)
- Royal College of General Practitioners (RCGP)
- Royal College of Nursing (RCN)

- National Institute for Health Research (NIHR)

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms around the requirements of the Scope, Appendix 3: Service category definitions of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

Due to the quantity of data on rehabilitation, three individual 'study type' filters were adapted to the questions to collect the following study types: systematic reviews and randomised controlled trials, along with qualitative information surrounding service users', carers and professionals' views and experiences.

Study Filters

1. Study Filter (SF1) Systematic reviews, meta-analysis, non-randomised or randomised controlled trials, trials, case control or cohort or cross-sectional studies
2. Study Filter (SF2) Cost effectiveness, economics
3. Study Filter (SF3) Qualitative studies or views and experiences (users, carers, professionals)

The individual study filters were combined with the following core search approach:

- A: Intervention (rehabilitation or intermediate care etc.)
- B: Outcomes (recover or maintain or regain independence)
- C: Duration (time, week, short, brief)
- D: Setting (Beds in acute (hospital), intermediate, nursing and residential care settings)
- E: Language and date limits (English, 2005-2015)

Some database searches were limited to the core search approach, these were adapted to the design of each individual database and provider platform.

Organisation and additional searches

Terms frequently used within the organisation searches for bed-based intermediate care consisted of: intermediate care, rehabilitation combined with bed-based or time and regaining independence. Relevant PDF's were then searched within, to clarify the relevance to the specific question.

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews or qualitative data.

RQ3. Crisis response (Intermediate Care)

Conducted in November 2015, the crisis response search strategy was formulated to answer questions about short term, emergency Intermediate Care in the home, or community setting.

Questions:

- What is the effectiveness and cost effectiveness of crisis response intermediate care?
- What are the views and experiences of people using services, their families and carers in relation to crisis response intermediate care?
- What are the views and experiences of health, social care and other practitioners about crisis response intermediate care?

Databases:

- Allied and Complementary Medicine Database (AMED)

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms around the requirements of the Scope, Appendix 3: Service category definitions of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

Due to the quantity of data on crisis response and the limited quantity of data on rapid response, three individual 'study type' filters were adapted to the questions to collect the following study types: systematic reviews and randomised controlled trials, with qualitative information surrounding service users', carers and professionals' views and experiences.

Study Filters:

1. Study Filter (SF1) Systematic reviews, meta-analysis, non-randomised or randomised controlled trials, trials, case control or cohort or cross-sectional studies
2. Study Filter (SF2) Cost effectiveness, economics
3. Study Filter (SF3) Qualitative studies or views and experiences (users, carers, professionals)

The individual study filters were combined with the following core search approach:

- A: Intervention (crisis response or intervention, rapid response or intervention etc.)
- B: Setting (home, community facilities, residential or nursing care etc.)
- C: Professionals (multi-disciplinary, multi-agency teams etc.)
- D: Assessment and referral (assessment, referral etc.)
- E: Time (short-term, time, quick, brief, emergency etc.)
- F: Activity and outcome (ADL, effectiveness, outcomes etc.)
- G: Language and date limits (English, 2005-2015)

Some database searches were limited to the core search approach, these were adapted to the design of each individual database and provider platform.

Organisation and additional searches:

Terms frequently used within the organisation searches for crisis response, rapid response (intermediate care) consisted of: crisis response / intervention, rapid response / intervention or rehabilitation combined with time limited terms in community or home settings. Relevant PDF's were then searched within, to clarify the relevance and inclusion to the specific question.

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews or qualitative data.

Reference harvesting:

National Audit of Intermediate Care. Summary Report. 2015.

Q3 A, B, C: Crisis Response (Intermediate Care) – effectiveness, cost effectiveness, views and experiences

#1 MeSH descriptor: [Crisis Intervention] explode all trees (149)

#2 MeSH descriptor: [Early Medical Intervention] explode all trees (102)

#3 MeSH descriptor: [Hospital Rapid Response Team] explode all trees (8)

- #4 ((Crisis or rapid or early) near (approach* or response* or resolution or intervention* or team* or service* or manage* or support or model* or home or assessment* or nurs* or rehabilitat* or care or scheme* or occurrence* or treatment* or therap*)):ab (Word variations have been searched) (18325)
- #5 (Crisis near (fall* or disabilit or condition* or function* or physical or mental or cognitive or aged or frail* or injur* or minor)):ab (Word variations have been searched) (60)
- #6 ((Crisis or rapid* or recover*) near (outcome* or impairment* or independen* or goal*)):ab (Word variations have been searched) (1612)
- #7 MeSH descriptor: [Ambulatory Care] explode all trees (3524)
- #8 (Episode near (crisis or care)):ab (Word variations have been searched) (196)
- #9 ((Unexpected or temporary) near (event* or need* or ill* or occurrence*)):ab (Word variations have been searched) (533)
- #10 ((Dependen* or circumstance*) near (fluctuat* or change* or difference* or measure* or need*)):ab (Word variations have been searched) (3050)
- #11 MeSH descriptor: [Emergency Medical Services] explode all trees (3085)
- #12 #1 or #2 or #3 or #4 or #5 or #6 or #7 or #8 or #9 or #10 or #11 (29727)
- #13 MeSH descriptor: [Housing] explode all trees (295)
- #14 MeSH descriptor: [Housing for the Elderly] explode all trees (36)
- #15 MeSH descriptor: [Independent Living] explode all trees (92)
- #16 MeSH descriptor: [Assisted Living Facilities] explode all trees (37)
- #17 Home:ab (Word variations have been searched) (14797)
- #18 MeSH descriptor: [Homebound Persons] explode all trees (26)
- #19 MeSH descriptor: [Rehabilitation Centers] explode all trees (613)

- #20 ((Rehabilitat* or reablement) near (centre* or center* or service*)):ab (Word variations have been searched) (1045)
- #21 ((Temporary or "extra care" or "close care" or specialist or sheltered or supported) near (home* or hous* or accommodation or setting* or facilit* or model* or scheme*)):ab (Word variations have been searched) (2184)
- #22 MeSH descriptor: [Intermediate Care Facilities] explode all trees (18)
- #23 ((Intermediate or skilled nursing) near (unit* or centre* or center* or scheme* or setting* or service* or facilit* or residen* or care)):ab (Word variations have been searched) (306)
- #24 MeSH descriptor: [Skilled Nursing Facilities] explode all trees (54)
- #25 ((Community or step up or step down or transitional) next (facility or care or hospital or unit or hospice)):ab (Word variations have been searched) (828)
- #26 MeSH descriptor: [Community Health Services] explode all trees (25208)
- #27 (Community near (rehab or scheme or model or setting or environment or provision)):ab (Word variations have been searched) (2446)
- #28 MeSH descriptor: [Community Mental Health Services] explode all trees (664)
- #29 MeSH descriptor: [Residential Facilities] explode all trees (1405)
- #30 (Residential near (facility or setting or environment or health or care)):ab (Word variations have been searched) (390)
- #31 ((Local authority or independent) near (facility or setting or environment or house)):ab (Word variations have been searched) (277)
- #32 MeSH descriptor: [Nursing Homes] explode all trees (1066)
- #33 MeSH descriptor: [Home Nursing] explode all trees (317)

- #34 (Nursing near (facility or home or setting or unit)):ab (Word variations have been searched) (2649)
- #35 MeSH descriptor: [Palliative Care] explode all trees (1465)
- #36 ((Care or rest or group or senior or elder or retire) near (accomodation or home or house or facility or unit)):ab (Word variations have been searched) (14952)
- #37 MeSH descriptor: [Homes for the Aged] explode all trees (504)
- #38 ((Old or elder or geriatric) near (people or age) near home*):ab (Word variations have been searched) (176)
- #39 MeSH descriptor: [Group Homes] explode all trees (45)
- #40 ((Subacute or sub-acute or "sub acute" or postacute or post-acute or "post acute") near care):ab (Word variations have been searched) (99)
- #41 ((Secondary or tertiary) near setting):ab (Word variations have been searched) (2323)
- #42 MeSH descriptor: [Home Care Services] explode all trees (2260)
- #43 MeSH descriptor: [Accidents, Home] explode all trees (92)
- #44 MeSH descriptor: [Prisons] explode all trees (92)
- #45 #13 or #14 or #15 or #16 or #17 or #18 or #19 or #20 or #21 or #22 or #23 or #24 or #25 or #26 or #27 or #28 or #29 or #30 or #31 or #32 or #33 or #34 or #36 or #37 or #38 or #39 or #40 or #41 or #42 or #43 or #44 (55362)
- #46 MeSH descriptor: [Interdisciplinary Communication] explode all trees (169)
- #47 MeSH descriptor: [Patient Care Team] explode all trees (1463)
- #48 (Interdisciplinary or inter-disciplinary or "inter disciplinary" or interprofessional or inter-professional or "inter professional" or multiprofessional or multi-

- professional or "multi professional" or multidisciplinary or multi-disciplinary or "multi disciplinary" or multiagency or multi-agency or trans-disciplinary or trans disciplinary or transdisciplinary):ab (Word variations have been searched) (2662)
- #49 MeSH descriptor: [Cooperative Behavior] explode all trees (703)
- #50 ((Joint or collaborative) near work*):ab (Word variations have been searched) (67)
- #51 MeSH descriptor: [Interprofessional Relations] explode all trees (434)
- #52 MeSH descriptor: [Delivery of Health Care, Integrated] explode all trees (282)
- #53 MeSH descriptor: [Progressive Patient Care] explode all trees (18)
- #54 MeSH descriptor: [Continuity of Patient Care] explode all trees (583)

Q4: Reablement

Conducted in February 2016, the Reablement search strategy was formulated to answer questions about reablement and other forms of short-term rehabilitation and Intermediate Care in the home, or community setting.

Questions:

- What is the effectiveness and cost effectiveness of reablement?
- What are the views and experiences of people using services, their families and carers in relation to reablement?
- What are the views and experiences of health, social care and other practitioners about reablement?

Databases:

- Ageline
- Allied and Complementary Medicine Database (AMED)
- Applied Social Sciences Index and Abstracts (ASSIA)
- British Nursing Index (BNI)
- CIRRIE Database of International Rehabilitation Research
- Cochrane Database of Systematic Reviews (Cochrane Library)
- Cumulative Index to Nursing and Allied Health Literature (CINAHL)
- Excerpta Medica database (Embase)
- IBSS International bibliography of social sciences
- Medical Literature Analysis and Retrieval System Online (MEDLINE)
- NHS Economic Evaluation Database (EED)
- OT Seeker
- Physiotherapy Evidence Database (PEDro)
- Prospero
- PsycINFO
- Rehabdata
- Social Policy and Practice (SPP) Inc. Social Online & others

Organisations:

- AGE UK
- DEMOS
- HousingLIN
- Kings Fund
- Local Government Association
- NHS England
- NIHR
- OPM
- PSSRU
- Reablement UK
- Royal Voluntary Service
- Think Local Act Personal
- York University

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms

around the requirements of the Scope, Appendix 3: Service category definitions of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

Due reablement and intermediate care being short-term interventions, the following core search approach was undertaken without date limits, to collect all studies on the topic (as this was a manageable number):

- A: Intervention 1 (reablement, home independence programmes etc.)
- B: Intervention 2 (rehabilitation, restorative, recuperative etc.)
- C: Setting (intermediate care, domiciliary care, homecare, community etc.)
- D: Duration (six week, time-limited, brief, short-term, effectiveness etc.)
- E: Language and age limits (adults, English)

Organisation and additional searches:

Terms frequently used within the organisation searches for reablement (intermediate care) consisted of: reablement, intermediate care or rehabilitation types combined with setting types. Relevant PDF's were then searched within, to clarify the relevance to the specific question.

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews, qualitative data or time limits.

The information specialist identified the following studies in the protocol development stage and recommended additional citation harvesting:

1. Winkel A, Langberg H, and Wæhrens EE. (2015) "Reablement in a community setting", *Disability and Rehabilitation*, 37(15), pp.1347-1352.
2. Legg L, Gladman J, Drummond A, Davidson A. (2016) "A systematic review of the evidence on home care reablement services", *Clinical Rehabilitation*, 30(8), pp.741-9.

3. Cochrane A, McGilloway S, Furlong M, Molloy DW, Stevenson M, Donnelly M. "Home-care 're-ablement' services for maintaining and improving older adults' functional independence (Protocol)", Cochrane Database of Systematic Reviews 2013, Issue 11.
4. Tuntland H, Aaslund MK, Espehaug B, Førlund O, Kjekken I (2015) "Reablement in community-dwelling older adults: a randomised controlled trial", BMC Geriatrics, 15:145.

The lead systematic reviewer screened the above references citations on title and date, highlighting the studies of relevance for inclusion into the core data for this question to the information specialist.

RQ5: Intermediate care or reablement for people living with dementia

Conducted in 2016, the Dementia and Reablement search strategy was formulated to answer questions about Intermediate Care in the home or community setting.

Questions:

- What is the effectiveness and cost effectiveness of intermediate and reablement for people living with dementia?
- What are the views and experiences of people living with dementia, their families and carers in relation to intermediate care and reablement?
- What are the views and experiences of health, social care and other practitioners about intermediate care and reablement for people living with dementia?

Databases:

- Allied and Complementary Medicine Database (AMED)
- Cochrane Database of Systematic Reviews, Trials, Economic reviews
- Cumulative Index to Nursing and Allied Health Literature (CINAHL)
- Excerpta Medica database (Embase)
- Medical Literature Analysis and Retrieval System Online (MEDLINE)
- Health Management Information Consortium (HMIC)
- Cochrane Library
- NIHR Library

- CRD databases
- Applied Social Sciences Index and Abstracts (ASSIA)
- Social Policy and Practice (SPP) including social care online
- Social Work Abstracts (SWA)
- Abstracts in Social Gerontology
- Ageline
- SocINDEX
- PsycINFO

Organisations:

- Alzheimer's society
- Joseph Rowntree Foundation
- Carers Trust
- Royal Voluntary Service
- Kings Fund
- Housing care
- Mental Health Foundation
- Alzheimer's research UK
- NHS England

Universities:

- University of York
- University College London
- University of Bradford
- University of Stirling

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms around the requirements of the Scope, Appendix 3: Service category definitions of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

Dementia (condition) and intermediate care (short-term intervention) was identified as a small data set, therefore the following core search approach was undertaken

without date limits, to collect all studies on the topic (as this was a manageable number):

A: Condition (alzheimer's, dementia, frontotemporal dementia etc.)

B: Intervention 1 (reablement, intermediate care, reenablement etc.)

C: Intervention 2 (restorative care, regaining independence etc.)

D: Duration (time factors, brief, short-term etc.)

E: Language limits (English)

Organisation and additional searches:

Terms frequently used within the organisation searches for dementia and reablement (intermediate care) consisted of: dementia and reablement, intermediate care and dementia, rehabilitation combined with dementia and time limits. Relevant PDF's were then searched within, to clarify the relevance to the specific question.

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews, qualitative data or time limits.

RQ 6 – Intermediate Care and Reablement – information, advice, advocacy, training and support

Conducted in June 2016, the communication search strategy was formulated to answer questions about Intermediate Care or Reablement and information, advice, advocacy, training and support.

Questions:

- What is the effectiveness and cost effectiveness of information, advice, advocacy, training and support for people using intermediate care, and reablement and their families and carer?
- What are the views and experiences of people using intermediate care and reablement, and their families and carers, about information, advice, advocacy, training and support?
- What are the views and experiences of health, social care and other practitioners about information, advice, advocacy, training and support for people using intermediate care and reablement and their families and carers?

Databases:

- Abstracts in Social Gerontology
- Ageline
- Allied and Complementary Medicine Database (AMED)
- Applied Social Sciences Index and Abstracts (ASSIA)
- British Nursing Index (BNI)
- Cumulative Index to Nursing and Allied Health Literature (CINAHL)
- Cochrane Database of Systematic Reviews, Trials, Economic reviews
- Excerpta Medica database (Embase)
- Health Management Information Consortium (HMIC)
- Medical Literature Analysis and Retrieval System Online (MEDLINE)
- Social Care Online
- Social Work Abstracts (SWA)
- SocINDEX

Organisations:

- ADASS
- Local Government Association (LGA)
- LGIU
- NHS England
- NIHR
- PIRU

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms around the requirements of the Scope, Appendix 3: Service category definitions of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

A broad core search approach was designed to capture the variety of information, advice, advocacy, training and support needs including education. The date limit 2000 – 2016 was applied at the request of the CG.

A: Intervention (reablement, intermediate care etc.) AND

B: Patient Information (communication, information, advocacy etc.) AND

C: Limits NOT (historical article, comment, letter, editorial, animals etc.) NOT / AND

D: Language and Date Limits (English, 2000 – 2016)

Organisation and additional searches:

Terms frequently used within the organisation searches for intermediate care and reablement – information, advocacy, training and support consisted of: intermediate care or reablement or rehabilitation combined with information, advocacy, training, support, communication. Relevant PDF's were then searched within, to clarify the relevance to the specific question.

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the

key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews and qualitative data.

RQ 7 - Intermediate Care

Conducted in August 2016, the Intermediate search within was formulated to answer questions about Intermediate Care in the home or community setting.

Questions:

- What characteristics of intermediate care and reablement service models and approaches are associated with improving outcomes for adults using these services and their families?
- What do adults using intermediate and reablement care services, their carers and families consider to be the important characteristics of service models and approaches?
- What do health, social care and other practitioners consider are the important characteristics of intermediate care and reablement service models and approaches?

The information specialist did not conduct a new database searches for this question. Instead, screening was carried out in the existing EPPI reviewer library for this topic, which included search results for all 6 previous questions as well as the recently conducted update search (for papers published 2015-2016). The review protocols for all previous searches contained the term 'intermediate care' so it was anticipated that all relevant papers have already been located. If any gaps were identified (by the technical team or in discussion with the GC), then additional searches were conducted to target those particular elements.

Organisation and additional searches:

Additional Google and Google Scholar additional organisation searches were undertaken to collect terms for intermediate care and consisted of; intermediate care combined with audits or hospital or home or time limits or models or outcomes or economics. Relevant PDF's were then searched within e.g. using intermediate care, to clarify the relevance to the specific question.

Update searches - all review questions 1-7

Conducted in July 2016, the updates search strategy was formulated to answer questions about Intermediate Care in the home or community setting.

Questions: See all previous questions above

Databases: See all databases in total list at the beginning of this appendix

A range of electronic databases in the fields of social care, health, rehabilitation and social science were searched, using a combination of controlled and free text terms around the requirements of the Scope, Appendix 3: Service category definitions of the 'National Audit of Intermediate Care 2014' and the Review Protocol.

A broad search was conducted to act as a check and balance to the individual question by question approach. This covered the date period 2015 – 2016 and data was then de-duplicated against the main dataset, leaving only studies that had not been captured by the question by question search approach, creating the final update search data set. This may have included data not already identified, due to the different sources used for each question but this is limited to the date period. Searches included all the key terms used for the individual searches and their key interventions of interest, along with study type terms.

The core search consisted of the following elements:

- A: Intervention (reablement, intermediate care, regaining independence, crisis intervention and hospital at home etc.)
- B: Study Type (reviews, costs, views etc.)
- C: Limits (population, study types etc.)
- D: Limits Language and dates (English, 2015-2016)

Organisation and additional searches:

Additional Google and Google Scholar searches were undertaken due to the decision to change the standard NCCSC search approach, to a question by question approach, after the scope searches had been conducted and the 'National Audit of Intermediate Care' service categories were identified. These searches included the key terms above associated with systematic review, outcomes, cost and effectiveness, views or experiences, literature reviews and qualitative data.

All searches - Update review questions 1-7**Abstracts in Social Gerontology - EBSCO**

Date searched: 19/07/2016

No. of records: 122

Limits: date (2015/01/01-2016/12/31)

Update searches - RQ1 - RQ7

Reference management

References for the all the reviews (excluding question seven) where managed in the following way:

1. A single Endnote library for each database or source (management)*
2. A combined Endnote library with all database results (de-duplicated)
3. A master library in EPPI Reviewer with all results (final de-duplicate check)

* NB: The code 'flag relevant' to other review questions was used, those identified as relevant to each subsequent question where added at this stage. The included studies from the scope data was also included into the core data for review question one.

References for question seven where managed in the following way:

4. A combined library created in EPPI Reviewer of all the single reviews and a final de-duplication of the all the studies combined. This was then used to search the pre-existing data found on intermediate care, with addition searches on audit data and grey literature within intermediate care.

Economic search

The searches to identify economic evaluations related to the review questions were the same as the main evidence search.

Review questions and objectives

Review Protocols

Individual review protocols were produced for each question, protocols for questions 1-6 (including the update search), were quality assured by a second Information Specialist and approved by the GC members and NICE. The review protocols contained a test search on MEDLINE which provided the details of the sources, terms and syntax intended for use. The formulation of the review protocol was two-fold, firstly the included studies from the scope were consulted to obtain information on terms and sources used and secondly additional google searches for each question were combined with the term 'search strategy' to check for existing searches on the topic to inform development.

Q number	Questions	Objectives of review	Criteria for considering studies for review
1 (a)	What is the effectiveness and cost effectiveness of home based intermediate care?	To identify the effectiveness and cost effectiveness of home based intermediate care interventions designed to support admission avoidance, faster recovery from illness, timely discharge from hospital and maximising independent living.	Population: Adults, aged 18 years and older, with experience of home based intermediate care services and their families, partners and carers. Self-funders and people who organise their own care and who have experience of home based intermediate care services are included.
1 (b)	What are the views and experiences of people using services, their families and carers in relation to home based intermediate care?	To identify emerging models and of and approaches to home based intermediate care and associated outcomes.	Housing practitioners, social care practitioners (providers, workers, managers, social workers), and health and social care commissioners involved in delivering home based intermediate care; personal assistants engaged by people with care and support needs and their families.
1 (c)	What are the views and experiences of health, social care and other practitioners about home based intermediate care?	To describe the self-reported views and experiences of adults, their families and carers about the care and support they receive from a home based intermediate care service, including what works and what does not work well.	General practice and other community-based healthcare practitioners,

		<p>To consider specifically whether people who receive care think that their care is personalised and coordinated across social care, inpatient hospital care and primary and community health services.</p> <p>To describe the views and experiences of people delivering, organising and commissioning social care, health and housing services including what works and what does not work well in home based intermediate care.</p>	<p>including GPs, therapists and community/ district nurses; hospital ward staff.</p> <p>Intervention: Community based, multi-disciplinary services provided to people in their own home or in a care home.</p> <p>Note the following exclusions: single condition rehabilitation (e.g. stroke) early supported discharge, general district nursing services and mental health rehabilitation or intermediate care</p> <p>Setting: Service users' home, including sheltered housing accommodation; supported housing; temporary accommodation, care (residential and nursing) homes or prisons.</p> <p>Outcomes: User and carer related outcomes (such as user and carer satisfaction; quality and continuity of care; choice and control; dignity and independence, involvement in decision-making and health and social care related quality of life) and service outcomes such as use of health and social care services, admission avoidance, delayed transfers of care and rates of hospital re-admissions within 30 days (see 1.6 in the Scope).</p> <p>The study designs relevant to the effectiveness and cost-</p>

3 (a)	What is the effectiveness and cost effectiveness of crisis response intermediate care?	To identify the effectiveness and cost effectiveness of crisis response intermediate care, designed to avoid hospital admission through short-term assessment and interventions.	Population: Adults, aged 18 years and older, with experience of crisis response intermediate care and their families, partners and carers. Self-funders and people who organise their own care and who have experience of crisis response intermediate care are included.
3 (b)	What are the views and experiences of people using services, their families and carers in relation to crisis response intermediate care?	To identify emerging models and approaches to crisis response intermediate care and associated outcomes.	Housing practitioners, social care practitioners (providers, workers, managers, social workers), and health and social care commissioners involved in delivering crisis response intermediate care;
3 (c)	What are the views and experiences of health, social care and other practitioners about crisis response intermediate care?	To describe the self-reported views and experiences of adults, their families and carers about the care and support they receive from a crisis response intermediate care service, including what works and what does not work well.	personal assistants engaged by people with care and support needs and their families.
		To consider specifically whether people who	General practice and

		<p>receive care think that their care is personalised and coordinated across social care, inpatient hospital care and primary and community health services.</p> <p>To describe the views and experiences of people delivering, organising and commissioning social care, health and housing services including what works and what does not work well in crisis response intermediate care.</p>	<p>other community-based healthcare practitioners, including GPs, therapists and community/ district nurses; hospital ward staff.</p> <p>Intervention: Community based, multi-disciplinary services provided to people in their own home or in a care home for up to 48 hours (or two working days). Includes intermediate care assessment teams, rapid response and crisis resolution.</p> <p>Note the following exclusions: mental health crisis resolution services, community matrons and active case management teams.</p> <p>Setting: Service users' home, including sheltered housing accommodation; supported housing; temporary accommodation, care (residential and nursing) homes or prisons.</p> <p>Outcomes: Person focussed outcomes (health and social care related quality of life; independence, choice and control over daily life; capability to achieve desired person-centred outcomes; user and carer satisfaction; speech, language and communication skills; continuity of care and years of life saved) and service outcomes (use of health and social care</p>

7 (a)	What characteristics of intermediate care and reablement service models and approaches are associated with improving outcomes for adults using these services and their families?	To identify the characteristics of service models and approaches to intermediate care and reablement that are associated with improving individual outcomes and experiences.	Population: Adults, aged 18 years and older, with experience of intermediate care services and their families, partners and carers. Self-funders and people who organise their own care and who have experience of intermediate care services are included.
7 (b)	What do adults using intermediate and reablement care services, their carers and families consider to be the important characteristics of service models and approaches?	To identify what helps and hinders implementation of intermediate care and reablement service models.	Housing practitioners, social care practitioners (providers, workers, managers, social workers), and health and social care commissioners involved in delivering intermediate care;
7 (c)	What do health, social care and other practitioners consider are the important characteristics of intermediate care and reablement goals?	To identify what helps and hinders the fulfilment of intermediate care and reablement goals.	personal assistants engaged by people with care and support needs and their families.

	<p>reablement service models and approaches?</p>		<p>Primary care and other community-based healthcare practitioners, including GPs, therapists and community/ district nurses; hospital ward staff.</p> <p>Intervention: Community or bed-based, multi/inter-disciplinary support designed to avoid hospital admission and facilitate hospital discharge. Services also support the development of skills and confidence to maximise independence.</p> <p>Note the following exclusions: single condition rehabilitation (e.g. stroke) early supported discharge, general district nursing services and mental health rehabilitation.</p> <p>Setting: Service users' home, including sheltered housing accommodation; supported housing; temporary accommodation, care (residential and nursing) homes or prisons. For bed based intermediate care, also acute and community hospitals or standalone intermediate care facilities.</p> <p>Note the following exclusions: General community hospital beds not designated as intermediate care/ rehabilitation. Mental health rehabilitation beds.</p>
--	--	--	---

			<p>Outcomes: Reported associations (quantitative or qualitative) between service features and service outcomes, including user and carer related outcomes (such as user and carer satisfaction; quality and continuity of care; choice and control; dignity and independence, involvement in decision-making and health and social care related quality of life) and service outcomes such as use of health and social care services, admission avoidance, delayed transfers of care and rates of hospital re-admissions within 30 days (see 1.6 in the Scope).</p> <p>The study designs relevant to questions 7a are likely to include: Process evaluations; Service evaluations; Quantitative and qualitative evaluations of different approaches; Observational & descriptive studies of process; Cohort studies, case control and before and after studies; National audits Mixed methods studies.</p> <p>The study designs relevant to 7b and 7c views and experiences questions are likely to include: Systematic reviews of qualitative studies on this topic;</p>
--	--	--	---

			<p>Qualitative studies of user and carer views of social and integrated care; Qualitative components of effectiveness and mixed methods studies; Observational and cross-sectional survey studies of user and carer experience. National audits reporting service user, carer and practitioner views. Mixed methods studies.</p> <p>Note that regardless of design, for papers to be included, they must report the study methodology.</p>
