

Lyme disease: diagnosis and management

[K] Evidence review for the management of non-neurological ocular manifestations

NICE guideline 95

Evidence review

April 2018

Final

*This evidence review was developed by
the National Guideline Centre*

Disclaimer

The recommendations in this guideline represent the view of NICE, arrived at after careful consideration of the evidence available. When exercising their judgement, professionals are expected to take this guideline fully into account, alongside the individual needs, preferences and values of their patients or service users. The recommendations in this guideline are not mandatory and the guideline does not override the responsibility of healthcare professionals to make decisions appropriate to the circumstances of the individual patient, in consultation with the patient and/or their carer or guardian.

Local commissioners and/or providers have a responsibility to enable the guideline to be applied when individual health professionals and their patients or service users wish to use it. They should do so in the context of local and national priorities for funding and developing services, and in light of their duties to have due regard to the need to eliminate unlawful discrimination, to advance equality of opportunity and to reduce health inequalities. Nothing in this guideline should be interpreted in a way that would be inconsistent with compliance with those duties.

NICE guidelines cover health and care in England. Decisions on how they apply in other UK countries are made by ministers in the [Welsh Government](#), [Scottish Government](#), and [Northern Ireland Executive](#). All NICE guidance is subject to regular review and may be updated or withdrawn.

1 Management (non-neurological ocular manifestations)

1.1 Review question: What is the most clinically and cost-effective treatment for people with non-neurological ocular manifestations related to Lyme disease (for example, keratitis, uveitis, iritis or scleritis)?

1.2 Introduction

Ocular presentations of Lyme disease are rare and therefore potentially under diagnosed. The diagnosis is difficult to confirm but serological blood tests and polymerase chain reaction (PCR) of vitreal fluid may be helpful if possible. Symptoms may occur soon after the infected tick bite but can also be delayed for many months. There are a variety of presentations including keratitis, uveitis, iritis, scleritis, neuroretinitis and panophthalmitis.

1.3 PICO table

For full details, see the review protocol in appendix A.

Table 1: PICO characteristics of review question

Population	Adults (18 years and over), young people (12 to 17 years) and children (under 12 years) with symptoms consistent with non-neurological ocular manifestations related to Lyme disease: <ul style="list-style-type: none"> • keratitis • uveitis • iritis • scleritis
Interventions	Antimicrobials, including but not limited to: <ul style="list-style-type: none"> • Penicillins <ul style="list-style-type: none"> ○ Amoxicillin (oral, IV) ○ Ampicillin (oral, IV) ○ Benzylpenicillin sodium / Penicillin G (IV) <ul style="list-style-type: none"> - Including Augmentin (Amoxicillin and clavulanic acid; oral, IV) ○ Phenoxyethylpenicillin / Penicillin V (oral) • Tetracyclines <ul style="list-style-type: none"> ○ Doxycycline (oral) ○ Minocycline (oral) • Cephalosporins <ul style="list-style-type: none"> ○ Cefotaxime (IV) ○ Ceftriaxone (IV) ○ Cefuroxime axetil (oral) • Macrolides <ul style="list-style-type: none"> ○ Azithromycin (oral) ○ Clarithromycin (oral, IV) • Fluoroquinolones <ul style="list-style-type: none"> ○ Ciprofloxacin (oral, IV) ○ Levofloxacin (oral, IV) ○ Moxifloxacin (oral, IV)

	<ul style="list-style-type: none"> ○ Nalidixic acid (oral) ○ Norfloxacin (oral) ○ Ofloxacin (oral, IV) ● Rifampicin (oral, IV) <p>Steroids (corticosteroids; oral, IV, topical, intravitreal)</p> <p>Non-steroidal anti-inflammatory drugs (NSAIDs; oral, IV, topical, intravitreal)</p> <p>Mydriatics</p> <ul style="list-style-type: none"> ● Acetylcholine (topical) ● Phenylephrine (topical)
Comparisons	<ul style="list-style-type: none"> ● Any type of intervention compared to each other <ul style="list-style-type: none"> ○ If data are available consider: <ul style="list-style-type: none"> - Type of agent (within class or between class) - Route of administration - Duration of treatment: 1 month versus longer ● Monotherapy versus polytherapy (any combination) ● Antimicrobial treatment, steroids, NSAIDs or mydriatics compared to no treatment / placebo
Outcomes	<p>Critical:</p> <ol style="list-style-type: none"> 1. Quality of life (any validated measure) 2. Cure (resolution of non-neurological ocular symptoms) 3. Reduction of non-neurological ocular symptoms 4. Relapse of non-neurological ocular symptoms <p>Important:</p> <ol style="list-style-type: none"> 5. Adverse events
Study design	<ul style="list-style-type: none"> ● RCTs ● Cohort studies (if no RCT evidence is found)

1.4 Clinical evidence

1.4.1 Included studies

No relevant RCTs and cohort studies comparing the effectiveness of antibiotics, steroids, NSAIDs or mydriatics versus each other or placebo as treatment for people with non-neurological ocular manifestations related to Lyme disease were identified.

See also the study selection flow chart in appendix C.

1.4.2 Excluded studies

See the excluded studies list in appendix I.

1.4.3 Summary of clinical studies included in the evidence review

No relevant clinical studies were identified.

1.4.4 Quality assessment of clinical studies included in the evidence review

1.5 Economic evidence

1.5.1 Included studies

No relevant health economic studies were identified.

See also the health economic study selection flow chart in appendix G.

1.5.2 Excluded studies

No relevant health economic studies were identified and excluded.

1.5.3 Unit costs

The following unit costs were presented to the committee to aid consideration of cost-effectiveness.

Table 2: UK costs of antimicrobials

Class	Drug	Age	Preparation	Mg/unit	Cost/unit (£)	Units/day	Course duration (days)	Cost per course (£)
Penicillins	Amoxicillin	7 days-11 months	125 mg/1.25 ml oral suspension paediatric	125	0.20	3	14–28	8.35–16.70
		1-4 years	250 mg/5 ml oral suspension	250	0.06	3	14–28	2.37–4.75
		>5 years	capsules	500	0.06	3	14–28 (g)	2.54–5.08
Penicillins	Phenoxy-methylpenicillin	Adults (a)	tablets	250	0.04	4	10	1.49
Tetracyclines	Doxycycline	>12 years	capsules	100	0.11	2	10–28 (h)	2.18–6.09
Cephalosporins	Cefuroxime axetil	>3 months	tablets	250	1.27	4	14–28 (g)	70.88–141.76
Macrolide	Clarithromycin	>1 month	tablets	500	0.16	2	14–21	4.42–6.63
Macrolide	Azithromycin	<12 years	40 mg/1 ml oral suspension	40	0.27	10 mg/kg	9 (i)	Weight dependent
		Adults	tablets	500	0.42	1	9 (i)	3.75
Cephalosporins	Cefotaxime	Adults (b)	2 g powder for solution for injection vials (IV)	2,000	3.75	3	10	112.50
Cephalosporins	Ceftriaxone	>9 years (c)(d)	2 g powder for solution for injection vials (IV) (e)	2,000	1.03	1	14–21	14.42–21.63
Penicillins	Benzylpenicillin sodium	Adults (f)	600 mg powder for solution for injection vials (IM)	600	2.73	2	3	16.38

Abbreviations: IM: intramuscular; IV: intravenously.

Sources: Unit costs from NHS Electronic Drug Tariff January 2017,¹¹⁷ except cefotaxime from BNF, January 2017²⁰ and ceftriaxone from EMIT March 2017;³⁷ dosage from BNF and BNF for Children January 2017,^{20, 21} exceptions below:

- (a) Source of dosage from RCT in adults with ECM: Steere 1983,¹⁶⁴ dosage for Lyme disease not available from BNF or BNF for children.
- (b) Source of dosage from RCT in adults with neuroborreliosis: Pfister 1989¹²⁹ and Pfister 1991,¹³⁰ dosage for Lyme disease not available from BNF or BNF for children.^{20, 21}
- (c) For disseminated Lyme borreliosis.
- (d) Dose for neonate and child up to 11 years (body weight <50 kg) 50-80 mg/kg once daily for 14-21 days. BNF for children January 2017.²¹
- (e) Administration can vary in adults and children >1 month: IV infusion over 30 mins or IV injection over 5 mins or deep muscular injection (doses over 1 g divided between more than 1 site): 2 g per day for 14-21 days BNF January 2017.²⁰
- (f) Source of dosage from RCT in adults with Lyme arthritis: Steere 1985:¹⁶³ 1.2 million U injected in each buttock weekly intramuscularly. Duration 3 weeks. Dosage for Lyme disease not available from BNF or BNF for children.^{20, 21}
- (g) Course duration for early Lyme 14-21 days; 28 days for Lyme arthritis. BNF January 2017.²⁰
- (h) Course duration for early Lyme 10-14 days; 28 days for Lyme arthritis. BNF January 2017.²⁰
- (i) Course dose and duration for adults: 500 mg once daily for 3 days, for 3 weeks. For children under 12 years: 10 mg/kg once daily for 3 days for 3 weeks. Committee expert opinion.

The cost of intravenous antibiotics will vary depending on where these are administered and by whom. These costs will include some of the following cost components:

- antibiotic
- nursing time (for example, Band 6 nurse, £44 per hour, PSSRU 2016⁴⁰)
- clinic space and clerical time (for outpatient administration)
- travel time (for home administration)
- hospital bed (for inpatient administration)
- consumables (for example, cannula, needles, syringes, dressing, IV giving set and glucose or sodium chloride solution).

A large proportion of the total cost of intravenous antibiotics is likely to be the cost of administration rather than the drug itself. As a result, intravenous drugs that have multiple doses administered per day will be more costly than those administered once daily. This was explored in a detailed costing analysis conducted for the NICE CG102 (Meningitis [bacterial] and meningococcal septicaemia in under 16s).¹¹⁴ In this analysis, they found that ceftriaxone was the cheapest antibiotic when compared to cefotaxime and benzylpenicillin. This was due to savings in staff time associated with once daily dosing, which offset the higher cost of the drug itself.

Inpatient administration

Intravenous antibiotics administered in an inpatient setting will incur the cost of an inpatient stay, which is assumed to include intravenous antibiotics treatment as part of the unit cost. The weighted average unit cost of non-elective inpatient stays and day cases for infectious disease in adults and children are summarised estimated in the table below using the NHS reference costs 2015/2016.⁴⁵

Table 3: Unit costs of inpatient administration

Schedule	Currency description	Currency codes	Weighted average unit costs (per day)
Day-case adults	Standard/major/complex infectious diseases with/without single/multiple interventions, with/without CC	WJ01B, WJ01D, WJ01E, WJ02B, WJ02C, WJ02D, WJ02E, WJ03A, WJ03B, WJ03C, WJ03D, WJ03E, WJ03F, WJ03G	£352
Day-case paediatrics	Paediatric minor/major/intermediate infections with/without CC	PW01A, PW01B, PW01C, PW16A, PW16B, PW16C, PW16D, PW16E, PW17D, PW17E, PW17F, PW17G	£448
Non-elective inpatient short-stay adults	Standard/major/complex infectious diseases with/without single/multiple interventions, with/without CC	WJ01A, WJ01B, WJ01C, WJ01D, WJ01E, WJ02A, WJ02B, WJ02C, WJ02D, WJ02E, WJ03A, WJ03B, WJ03C, WJ03D, WJ03E, WJ03F, WJ03G	£432
Non-elective inpatient short-stay paediatrics	Paediatric minor/major/intermediate infections with/without CC	PW01A, PW01B, PW01C, PW16A, PW16B, PW16C, PW16D, PW16E, PW17D, PW17E, PW17F, PW17G	£521
Non-elective inpatient long-stay adults	Standard/major/complex infectious diseases with/without single/multiple interventions, with/without CC	WJ01A, WJ01B, WJ01C, WJ01D, WJ01E, WJ02A, WJ02B, WJ02C, WJ02D, WJ02E, WJ03A, WJ03B, WJ03C, WJ03D, WJ03E, WJ03F, WJ03G	£473
Non-elective inpatient long-stay paediatrics	Paediatric minor/major/intermediate infections with/without CC	PW01A, PW01B, PW01C, PW16A, PW16B, PW16C, PW16D, PW16E, PW17D, PW17E, PW17F, PW17G	£699

Source: NHS reference costs 2015/2016⁴⁵

Outpatient administration

Intravenous antibiotics may also be administered as part of an outpatient parenteral antibiotic therapy (OPAT) service, which is available in some hospitals. This allows for administration in an outpatient clinic or in a home setting by a district nurse and is for people who require parenteral treatment but are otherwise stable and well enough not to be in hospital. There is currently no NHS reference cost for this service.

A UK study by Chapman 2009²⁹ reports that this type of service costs between 41% and 61% of the equivalent inpatient costs. Based on these estimates from Chapman 2009 and the unit cost for an adult day case in Table 3, the cost of OPAT would be approximately £144 to £215 per day. These costs would include the cost of the drug as well as the administration.

1.6 Resource impact

We do not expect recommendations resulting from this review area to have a significant impact on resources.

1.7 Evidence statements

1.7.1 Clinical evidence statements

No relevant evidence was identified.

1.7.2 Health economic evidence statements

No relevant economic evaluations were identified.

1.8 The committee's discussion of the evidence

1.8.1 Interpreting the evidence

1.8.1.1 The outcomes that matter most

The guideline committee considered quality of life, cure or the resolution of non-neurological ocular symptoms, the reduction of non-neurological ocular symptoms, and the relapse of non-neurological ocular symptoms to be critical outcomes. Adverse events as a result of treatment were considered to be an important outcome.

No evidence for any of the outcomes was identified for this review.

1.8.1.2 The quality of the evidence

No evidence was identified for this review.

1.8.1.3 Benefits and harms

No evidence was identified for this review.

1.8.2 Cost effectiveness and resource use

No relevant health economic evidence was identified. The unit costs of different antimicrobials were presented to the committee.

1.8.3 Other factors the committee took into account

The committee were aware that it is difficult to diagnose Lyme disease as a cause of non-neurological ocular symptoms.

The committee agreed that people with Lyme disease and non-neurological ocular symptoms would probably also present with other symptoms suggestive of Lyme disease. In these situations, using the treatment for the other symptoms associated with Lyme disease would usually be appropriate.

The committee considered, however, that investigation and management of people with more severe ocular symptoms was a matter for specialist practice and that it would be usual practice for an ophthalmologist to be involved in their care. The committee agreed not to make specific recommendations in this area because of the lack of evidence and the

specialist nature of treatment. The committee made a general research recommendation for antibiotic management of Lyme disease but did not prioritise this area for a separate research recommendation.

Appendices

Appendix A: Review protocols

Table 4: Review protocol for the management of non-neurological ocular manifestations related to Lyme disease

Question number: 4.8

Relevant section of Scope: management

Field	Content
Review question	What is the most clinically and cost-effective treatment for people with non-neurological ocular manifestations related to Lyme disease (for example, keratitis, uveitis, iritis, scleritis)?
Type of review question	Intervention A review of health economic evidence related to the same review question was conducted in parallel with this review. For details, see the health economic review protocol for this NICE guideline.
Objective of the review	The review questions on the condition-specific management of Lyme disease aim to identify the most effective treatment in different clinical scenarios. The questions have been developed in a way to identify the evidence for all potential populations and scenarios, even if clinical presentations are more diverse. The population for this review consists of people with non-neurological ocular manifestations related to Lyme disease.
Eligibility criteria – population / disease / condition	Adults (18 years and over), young people (12 to 17 years) and children (under 12 years) with symptoms consistent with non-neurological ocular manifestations related to Lyme disease: <ul style="list-style-type: none"> • keratitis • uveitis • iritis • scleritis
Eligibility criteria – intervention(s)	Antimicrobials, including but not limited to: <ul style="list-style-type: none"> • Penicillins <ul style="list-style-type: none"> ○ Amoxicillin (oral, IV) ○ Ampicillin (oral, IV) ○ Benzylpenicillin sodium / Penicillin G (IV) ○ Including Augmentin (Amoxicillin and clavulanic acid; oral, IV) ○ Phenoxyethylpenicillin / Penicillin V (oral) • Tetracyclines <ul style="list-style-type: none"> ○ Doxycycline (oral) ○ Minocycline (oral) • Cephalosporins <ul style="list-style-type: none"> ○ Cefotaxime (IV) ○ Ceftriaxone (IV) ○ Cefuroxime axetil (oral) • Macrolides <ul style="list-style-type: none"> ○ Azithromycin (oral) ○ Clarithromycin (oral, IV) • Fluoroquinolones <ul style="list-style-type: none"> ○ Ciprofloxacin (oral, IV)

Field	Content
	<ul style="list-style-type: none"> ○ Levofloxacin (oral, IV) ○ Moxifloxacin (oral, IV) ○ Nalidixic acid (oral) ○ Norfloxacin (oral) ○ Ofloxacin (oral, IV) ○ Rifampicin (oral, IV) <p>Steroids (corticosteroids)</p> <p>Non-steroidal anti-inflammatory drugs (NSAIDs)</p> <p>Mydriatics</p> <ul style="list-style-type: none"> ● Acetylcholine ● Phenylephrine
Eligibility criteria – comparator(s)	<ul style="list-style-type: none"> ● Any type of intervention compared to each other <ul style="list-style-type: none"> ○ If data are available, consider: <ul style="list-style-type: none"> - Type of agent (within class or between class) - Route of administration - Duration of treatment: 1 month versus longer ● Monotherapy versus polytherapy (any combination) ● Antimicrobial treatment, steroids, NSAIDs or mydriatics compared to no treatment / placebo
Outcomes and prioritisation	<p>Critical:</p> <ol style="list-style-type: none"> 1. Quality of life (any validated measure) 2. Cure (resolution of non-neurological ocular symptoms) 3. Reduction of non-neurological ocular symptoms 4. Relapse of non-neurological ocular symptoms <p>Important:</p> <ol style="list-style-type: none"> 5. Adverse events
Eligibility criteria – study design	<p>RCTs</p> <p>Cohort studies (if no RCT evidence is found)</p>
Other inclusion exclusion criteria	<p>Date limits for search: none</p> <p>Language: English only</p> <p>Setting: all settings in which NHS care is provided or commissioned</p> <p>The following interventions will not be considered for inclusion:</p> <ul style="list-style-type: none"> ● Metronidazole ● Trimethoprim
Proposed sensitivity / subgroup analysis, or meta-regression	<p>The following groups will be considered separately if data are available (strata):</p> <ul style="list-style-type: none"> ● Children (under 12 years); young people and adults (12 years and over) ● Onset of specific symptoms less than 6 weeks; 6 weeks to 6 months; over 6 months <p>Subgroups (to be investigated if heterogeneity is identified):</p> <ul style="list-style-type: none"> ● Pregnant women ● People who are immunocompromised ● People in whom any previous course of treatment has failed
Selection process – duplicate screening / selection / analysis	<p>Studies will be sifted by title and abstract. Potentially significant publications obtained in full text will then be assessed against the inclusion criteria specified in this protocol.</p>

Field	Content
Data management (software)	<p>Pairwise meta-analyses will be performed using Cochrane Review Manager (RevMan5).</p> <p>GRADEpro will be used to assess the quality of evidence for each outcome</p> <p>Bibliographies, citations, study sifting and reference management will be managed using EndNote.</p> <p>Data extractions will be performed using EviBase, a platform designed and maintained by the National Guideline Centre (NGC)</p>
Information sources – databases and dates	<p>Clinical searches Medline, Embase, The Cochrane Library all years</p> <p>Health economic searches Medline, Embase, NHS Economic Evaluation Database (NHS EED), Health Technology Assessment (HTA) all years</p>
Identify if an update	Not applicable
Author contacts	https://www.nice.org.uk/guidance/indevelopment/gid-ng10007
Highlight if amendment to previous protocol	For details, please see section 4.5 of Developing NICE guidelines: the manual.
Search strategy – for one database	For details, please see appendix B
Data collection process – forms / duplicate	A standardised evidence table format will be used, and published as appendix D of the evidence report.
Data items – define all variables to be collected	For details, please see evidence tables in appendix D (clinical evidence tables) or H (health economic evidence tables).
Methods for assessing bias at outcome / study level	<p>Standard study checklists were used to appraise individual studies critically. For details, please see section 6.2 of Developing NICE guidelines: the manual</p> <p>The risk of bias across all available evidence will be evaluated for each outcome using an adaptation of the ‘Grading of Recommendations Assessment, Development and Evaluation (GRADE) toolbox’ developed by the international GRADE working group http://www.gradeworkinggroup.org/</p>
Criteria for quantitative synthesis	<p>For details, please see section 6.4 of Developing NICE guidelines: the manual.</p> <p>Meta-analysis will be conducted wherever possible (that is, where similar studies can be combined)</p> <p>In the absence of clinically established MIDs, standard MIDs for dichotomous (25% risk reduction or risk increase) and continuous outcomes (+/-0.5 standard deviation) will be used</p> <p>If heterogeneity is found, the influence of subgroups will be examined</p>
Methods for quantitative analysis – combining studies and exploring (in)consistency	For details, please see the separate Methods report for this guideline.
Meta-bias assessment – publication bias, selective reporting bias	For details, please see section 6.2 of Developing NICE guidelines: the manual.
Confidence in cumulative evidence	For details, please see sections 6.4 and 9.1 of Developing NICE guidelines: the manual.
Rationale / context – what is known	For details, please see the introduction to the evidence review.
Describe contributions of	A multidisciplinary committee developed the evidence review. The

Field	Content
authors and guarantor	committee was convened by the NGC and chaired by Saul Faust in line with section 3 of Developing NICE guidelines: the manual. Staff from the NGC undertook systematic literature searches, appraised the evidence, conducted meta-analysis and cost-effectiveness analysis where appropriate, and drafted the evidence review in collaboration with the committee. For details, please see Developing NICE guidelines: the manual.
Sources of funding / support	The NGC is funded by NICE and hosted by the Royal College of Physicians.
Name of sponsor	The NGC is funded by NICE and hosted by the Royal College of Physicians.
Roles of sponsor	NICE funds the NGC to develop guidelines for those working in the NHS, public health and social care in England.
PROSPERO registration number	Not registered

Table 5: Health economic review protocol

Review question	All questions – health economic evidence
Objectives	To identify health economic studies relevant to any of the review questions.
Search criteria	<ul style="list-style-type: none"> • Populations, interventions and comparators must be as specified in the clinical review protocol above. • Studies must be of a relevant health economic study design (cost–utility analysis, cost-effectiveness analysis, cost–benefit analysis, cost–consequences analysis, comparative cost analysis). • Studies must not be a letter, editorial or commentary, or a review of health economic evaluations. (Recent reviews will be ordered although not reviewed. The bibliographies will be checked for relevant studies, which will then be ordered.) • Unpublished reports will not be considered unless submitted as part of a call for evidence. • Studies must be in English.
Search strategy	A health economic study search will be undertaken using population-specific terms and a health economic study filter – see appendix B below.
Review strategy	<p>Studies not meeting any of the search criteria above will be excluded. Studies published before 2001, abstract-only studies and studies from non-OECD countries or the US will also be excluded.</p> <p>Each remaining study will be assessed for applicability and methodological limitations using the NICE economic evaluation checklist which can be found in appendix H of Developing NICE guidelines: the manual (2014).¹⁵</p> <p>Inclusion and exclusion criteria</p> <ul style="list-style-type: none"> • If a study is rated as both ‘Directly applicable’ and with ‘Minor limitations’, then it will be included in the guideline. A health economic evidence table will be completed and it will be included in the health economic evidence profile. • If a study is rated as either ‘Not applicable’ or with ‘Very serious limitations’, then it will usually be excluded from the guideline. If it is excluded, then a health economic evidence table will not be completed and it will not be included in the health economic evidence profile. • If a study is rated as ‘Partially applicable’, with ‘Potentially serious limitations’ or both, then there is discretion over whether it should be included. <p>Where there is discretion</p> <p>The health economist will make a decision based on the relative applicability and</p>

quality of the available evidence for that question, in discussion with the guideline committee if required. The ultimate aim is to include health economic studies that are helpful for decision-making in the context of the guideline and the current NHS setting. If several studies are considered of sufficiently high applicability and methodological quality that they could all be included, then the health economist, in discussion with the committee if required, may decide to include only the most applicable studies and to exclude the remaining studies selectively. All studies excluded based on applicability or methodological limitations will be listed with explanation in the excluded health economic studies appendix below.

The health economist will be guided by the following hierarchies.

Setting:

- UK NHS (most applicable).
- OECD countries with predominantly public health insurance systems (for example, France, Germany, Sweden).
- OECD countries with predominantly private health insurance systems (for example, Switzerland).
- Studies set in non-OECD countries or in the US will be excluded before being assessed for applicability and methodological limitations.

Health economic study type:

- Cost–utility analysis (most applicable).
- Other type of full economic evaluation (cost–benefit analysis, cost-effectiveness analysis, cost–consequences analysis).
- Comparative cost analysis.
- Non-comparative cost analyses including cost-of-illness studies will be excluded before being assessed for applicability and methodological limitations.

Year of analysis:

- The more recent the study, the more applicable it will be.
- Studies published in 2001 or later but that depend on unit costs and resource data entirely or predominantly before 2001 will be rated as ‘Not applicable’.
- Studies published before 2001 will be excluded before being assessed for applicability and methodological limitations.

Quality and relevance of effectiveness data used in the health economic analysis:

- The more closely the clinical effectiveness data used in the health economic analysis match with the outcomes of the studies included in the clinical review the more useful the analysis will be for decision-making in the guideline.

Appendix B: Literature search strategies

The literature searches for this review are detailed below and complied with the methodology outlined in Developing NICE guidelines: the manual 2014, updated 2017
<https://www.nice.org.uk/guidance/pmg20/resources/developing-nice-guidelines-the-manual-pdf-72286708700869>

For more detailed information, please see the Methodology Review.

B.1 Clinical search literature search strategy

The search for this review was constructed using population terms. An excluded studies filter was applied where appropriate.

B.2 Health Economics literature search strategy

Health economic evidence was identified by conducting a broad search relating to Lyme disease population in NHS Economic Evaluation Database (NHS EED – this ceased to be updated after March 2015) and the Health Technology Assessment database (HTA) with no date restrictions. NHS EED and HTA databases are hosted by the Centre for Research and Dissemination (CRD). Additional searches were run on Medline and Embase for health economics, economic modelling and quality of life studies.
