

# Alectinib for adjuvant treatment of ALK-positive non-small-cell lung cancer

Information for the public

Published: 13 November 2024

[www.nice.org.uk](http://www.nice.org.uk)

Alectinib (Alecensa) is available on the NHS. It is a possible adjuvant treatment for stage 1B (tumours 4 cm or larger) to 3A ALK-positive non-small-cell lung cancer (NSCLC) after surgery in adults. An adjuvant treatment is one that is offered after surgery to lower the risk that the cancer will come back.

## Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

## Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

## Information and support

The [NHS webpage on lung cancer](#) may be a good place to find out more.
