

# Tebentafusp for treating advanced uveal melanoma

Information for the public

Published: 9 January 2025

[www.nice.org.uk](http://www.nice.org.uk)

Tebentafusp (Kimmtrak) is available on the NHS. It is a possible treatment for uveal melanoma in adults that:

- has the HLA-A\*02:01 genotype and
- is unresectable (cannot be surgically removed) or metastatic (has spread to other parts of the body).

## Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

## Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

## Information and support

The [NHS webpage on eye cancer](#) may be a good place to find out more.

These organisations can give you advice and support:

- [Ocular Melanoma UK](#) (0300 790 0512)
- [Cancer Research UK](#) (0808 800 4040)
- [Macmillan Cancer Support](#) (0808 808 0000)

You can also get support from your local [Healthwatch](#).
