

HTA: Naltrexone to prevent relapse in Drug Misuse

Royal Collage of General Practitioners: Submission on the technology

Our comments are similar to the ones made on the draft scope.

This HTA is identical to the methadone one. I am surprised no mention has been made of naltrexone implants, ultrarapid detox . There are some style issues and it is also important to include retention in treatment - defined as continuous contact with the service, as an outcome measure.

With thanks to:
Dr Clare Gerada MBE FRCGP
