

Abstract No. 5024

**Overall Survival with Sunitinib versus  
Interferon-alfa (IFN- $\alpha$ ) as First-line  
Treatment of Metastatic Renal Cell  
Carcinoma (mRCC)**

---

*Supported by Pfizer Inc.*

# Disclosure

---

- ◆ **Advisory Role: Pfizer, Wyeth, Novartis, Keryx**
- ◆ **Honoraria: Pfizer, Wyeth**
- ◆ **Research Funding: Pfizer, Novartis, Wyeth, Keryx, Amgen, Argos**

# Background

- ◆ Sunitinib (SUTENT®) is a multitargeted receptor tyrosine kinase inhibitor of VEGFR and PDGFR
- ◆ Randomized phase 3 trial in mRCC showed statistically significant improvement in PFS and ORR of sunitinib compared to IFN- $\alpha$ <sup>1</sup>
  - Median PFS: 11 mo vs. 5 mo (HR: 0.415; p <0.000001)
- ◆ Results of final survival analysis are reported

<sup>1</sup>Motzer et al. NEJM 2007;356:115-124

# Study Endpoints

## *Primary Endpoint*

### ◆ **Progression-free survival**

- 90% power to detect a 35% improvement
- Primary endpoint (EP) met at the pre-planned Interim Analysis 2

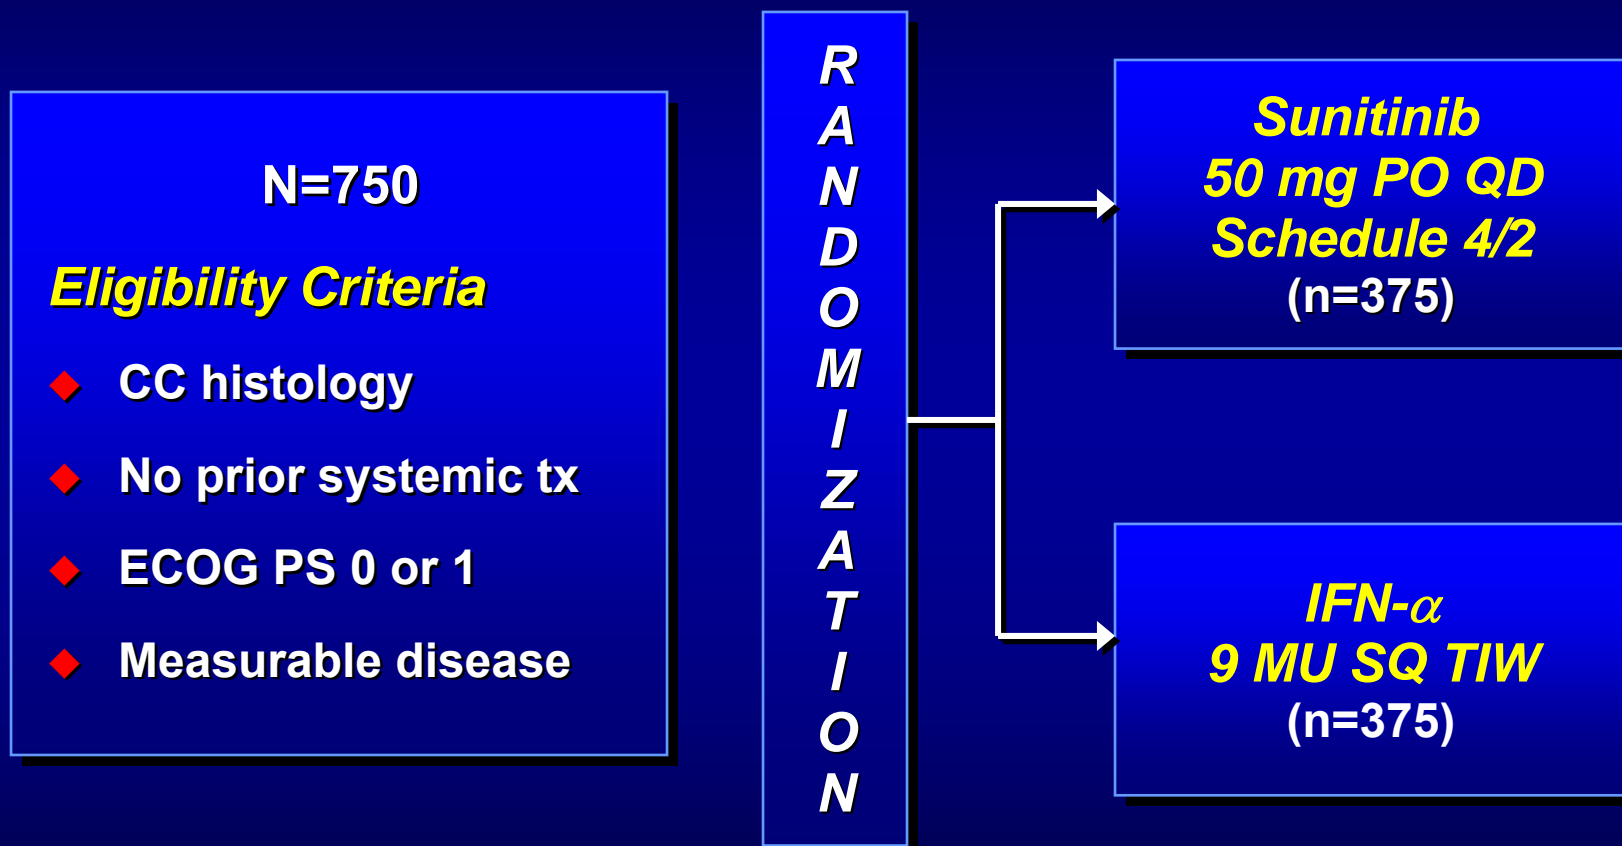

## *Secondary Endpoints*

### ◆ **Overall survival**

- 85% power to detect a 35.7% improvement
- 390 events required for the final analysis

### ◆ **Response rate, Safety, Patient-reported outcomes**

# Study Design

\*Results from Interim Analysis 2 → 1°EP of PFS met → IFN-α pts allowed to crossover to sunitinib upon documented disease progression (Feb 2006)

# Sunitinib Study Summary

---

- ◆ Randomized, phase 3 study: Sunitinib vs. IFN- $\alpha$  (1:1)
- ◆ Accrual: Aug 2004 to Oct 2005
- ◆ Nov 2005: Data cut-off for Interim Analysis 2
  - 1° EP of PFS met
  - 2° EP of OS analysis performed → medians not reached
- ◆ Feb 2006: Protocol amended to allow IFN- $\alpha$  pts to crossover to sunitinib upon documented disease progression
- ◆ Final survival analysis: 390 events required for a 2-sided, unstratified log-rank test with 85% power and significance level of 0.05

# Statistical Methods

- ◆ Pre-specified survival analysis performed using unstratified / stratified log-rank and Wilcoxon tests, and the Cox model
- ◆ Stratified analyses based on three pre-specified stratification factors: ECOG PS, LDH, nephrectomy
- ◆ **Log-rank test\***: more suitable test when the ratio of death rates between two treatment groups is constant over time
- ◆ **Wilcoxon test\***: more appropriate test when the ratio of death rates between two treatment groups is not constant over time in situations where survival data may be confounded by crossover or post-study treatments

# Patient Characteristics

<b>Characteristics</b>	<b>Sunitinib (n=375)</b>	<b>IFN-<math>\alpha</math> (n=375)</b>
<b>Median age, yrs (range)</b>	<b>62 (27-87)</b>	<b>59 (34-85)</b>
<b>ECOG PS 0/1 (%)</b>	<b>62/38</b>	<b>61/39</b>
<b>Prior nephrectomy (%)</b>	<b>90</b>	<b>89</b>
<b>Sites of disease involvement (%)</b>		
<b>Lung</b>	<b>78</b>	<b>79</b>
<b>Liver</b>	<b>26</b>	<b>24</b>
<b>Bone</b>	<b>30</b>	<b>30</b>
<b>Number of metastatic sites (%)</b>		
<b>1</b>	<b>19</b>	<b>24</b>
<b><math>\geq 2</math></b>	<b>81</b>	<b>76</b>
<b>MSKCC risk factors* (%)</b>		
<b>0 (favorable)</b>	<b>38</b>	<b>34</b>
<b>1-2 (intermediate)</b>	<b>56</b>	<b>59</b>
<b><math>\geq 3</math> (poor)</b>	<b>6</b>	<b>7</b>

\* Motzer et al. JCO 2002; Excludes 17 pts from IFN- $\alpha$  with missing data

# Treatment Administered & Patient Disposition

	<b>Sunitinib (n=375)</b>	<b>IFN-<math>\alpha</math> (n=375)</b>
<b>Median treatment duration, mo (range)</b>	<b>11 (&lt;1–41+)</b>	<b>4 (&lt;1–40+)</b>
<b>Ongoing on assigned treatment, n (%)</b>	<b>52 (14)</b>	<b>6 (2)</b>
<b>Reason for discontinuation, n (%)</b>		
<b>Progressive disease</b>	<b>226 (60)</b>	<b>243 (65)*</b>
<b>Adverse event</b>	<b>70 (19)</b>	<b>86 (23)*</b>
<b>Consent withdrawn</b>	<b>21 (6)</b>	<b>38 (10)**</b>
<b>Protocol violation / Other</b>	<b>6 (2)</b>	<b>2 (1)</b>

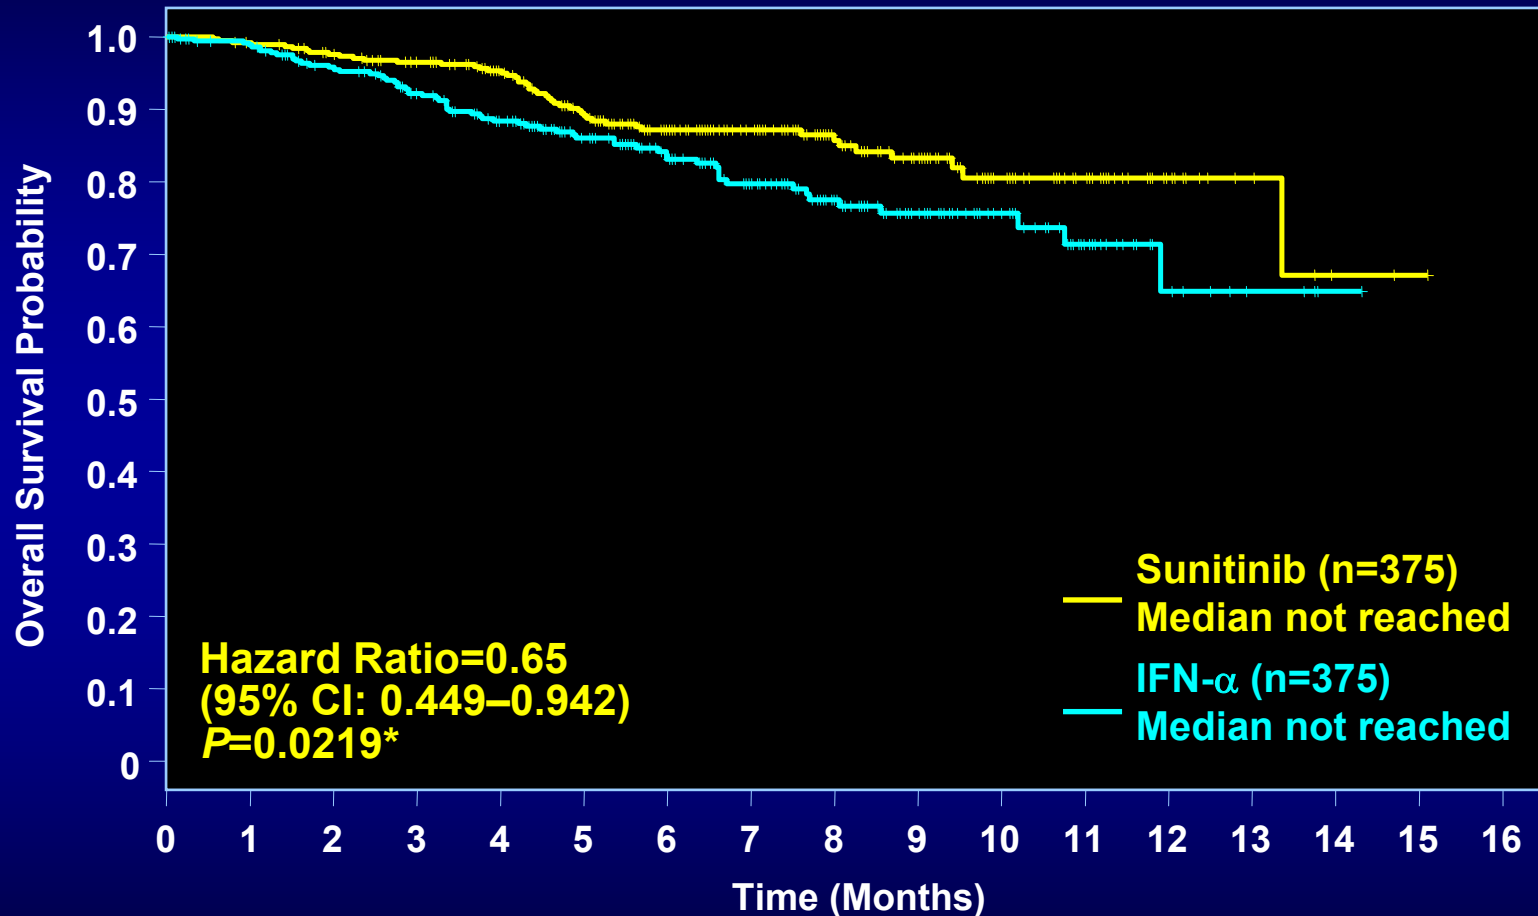

\*25 pts from the IFN- $\alpha$  group crossed over to sunitinib on study; \*\*15 pts (4%) randomized to IFN- $\alpha$  withdrew prior to starting treatment

# Updated Efficacy Results

	<b>Sunitinib (n=375)</b>	<b>IFN-<math>\alpha</math> (n=375)</b>
<b>Median Progression-free Survival*, mos (95% CI)</b>		
Independent Review	11 (11-13)	5 (4-6)
Investigator	11 (11-13)	5 (4-6)
<b>Objective response*, % (95% CI)</b>		
Independent Review	39 (34-44)	8 (6-12)
Investigator	47 (42-52)	12 (9-16)

**\*Sunitinib vs IFN- $\alpha$ :  $P < 0.000001$**

# Overall Survival: Interim Analysis 2 (data cut-off Nov 2005)

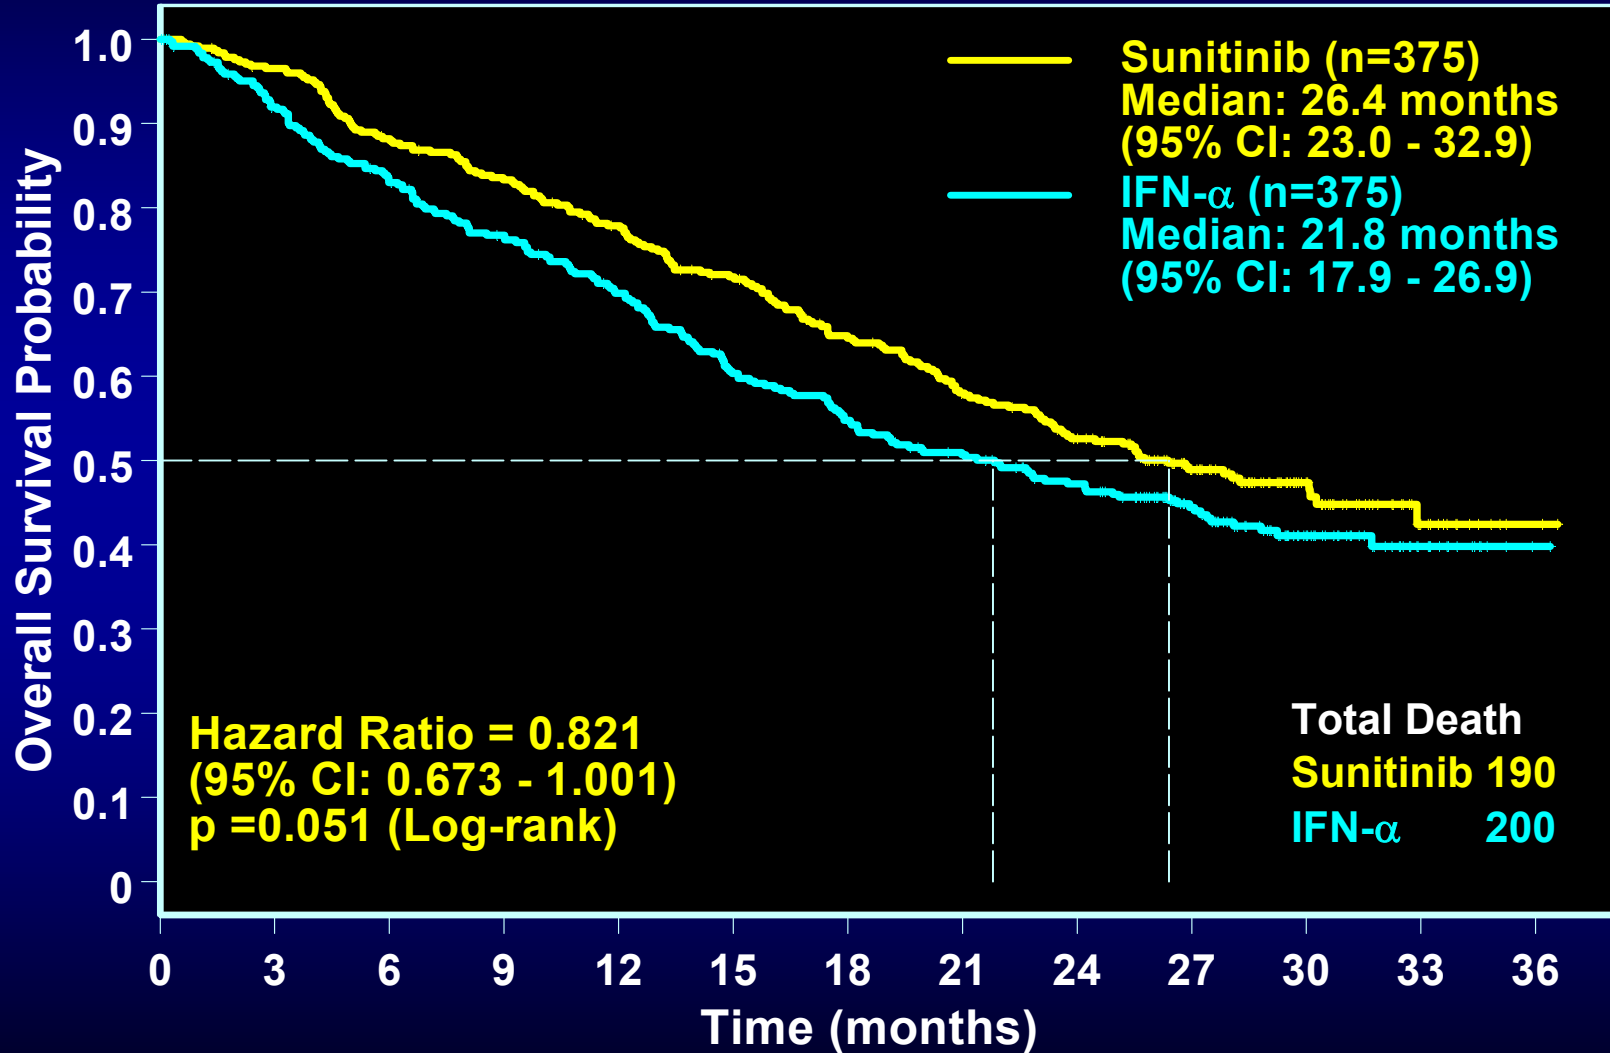

**No. of subjects at risk**

<b>Sunitinib:</b>	375	341	190	84	15	1
<b>IFN-<math>\alpha</math>:</b>	375	296	162	66	10	0

*\*The observed p-value did not meet the pre-specified level of significance for this interim analysis*

# Final Overall Survival

nDeath/nRisk Sunit	375	44 / 326	38 / 283	48 / 229	42 / 180	14 / 61	4 / 2
nDeath/nRisk IFN- $\alpha$	375	61 / 295	46 / 242	52 / 187	25 / 149	15 / 53	1 / 1

# Overall Survival: Crossover patients censored (n=25)

# Overall Survival Analyses

	Pre-specified Analyses		Exploratory Analyses
	Unstratified	Stratified	Crossover pts censored
<b>Median OS (mos)</b>	26.4 vs. 21.8	26.4 vs. 21.8	26.4 vs. 20.0
<b>HR (95% CI)</b>	0.821 (0.673, 1.001)	0.818 (0.669, 0.999)	0.808 (0.661, 0.987)
<b>P-value (Log-rank)</b>	0.0510	0.0491	0.0362
<b>P-value (Wilcoxon)</b>	0.0128	0.0132	0.0081

\*Stratification factors: ECOG PS, LDH, and nephrectomy

# Post-Study Treatments\*

	<i>Sunitinib, n (%) (n=323)</i>	<i>IFN-<math>\alpha</math>, n (%) (n=359)</i>
<i>Any post-study treatment</i>	182 (56)	213 (59)
<i>Sunitinib</i>	36 (11)	117 (33)
<i>Other VEGF Inhibitors</i>	106 (33)	115 (32)
<i>Cytokines</i>	63 (20)	47 (13)
<i>mTOR Inhibitors</i>	28 (9)	16 (4)
<i>Chemotherapy</i>	21 (6)	20 (6)

\*Treatments received after discontinuation from the study

# Post-Study Treatments

	<i>Sunitinib, n (%)</i> <i>(n=323)</i>	<i>IFN-<math>\alpha</math>, n (%)</i> <i>(n=359)</i>
<i>Any post-study treatment</i>	182 (56)	213 (59)
<i>Sunitinib</i>	36 (11)	117 (33)
<i>Other VEGF Inhibitors</i>	106 (33)	115 (32)
<i>Cytokines</i>	63 (20)	47 (13)
<i>mTOR Inhibitors</i>	28 (9)	16 (4)
<i>Chemotherapy</i>	21 (6)	20 (6)

*\*P<0.0001*

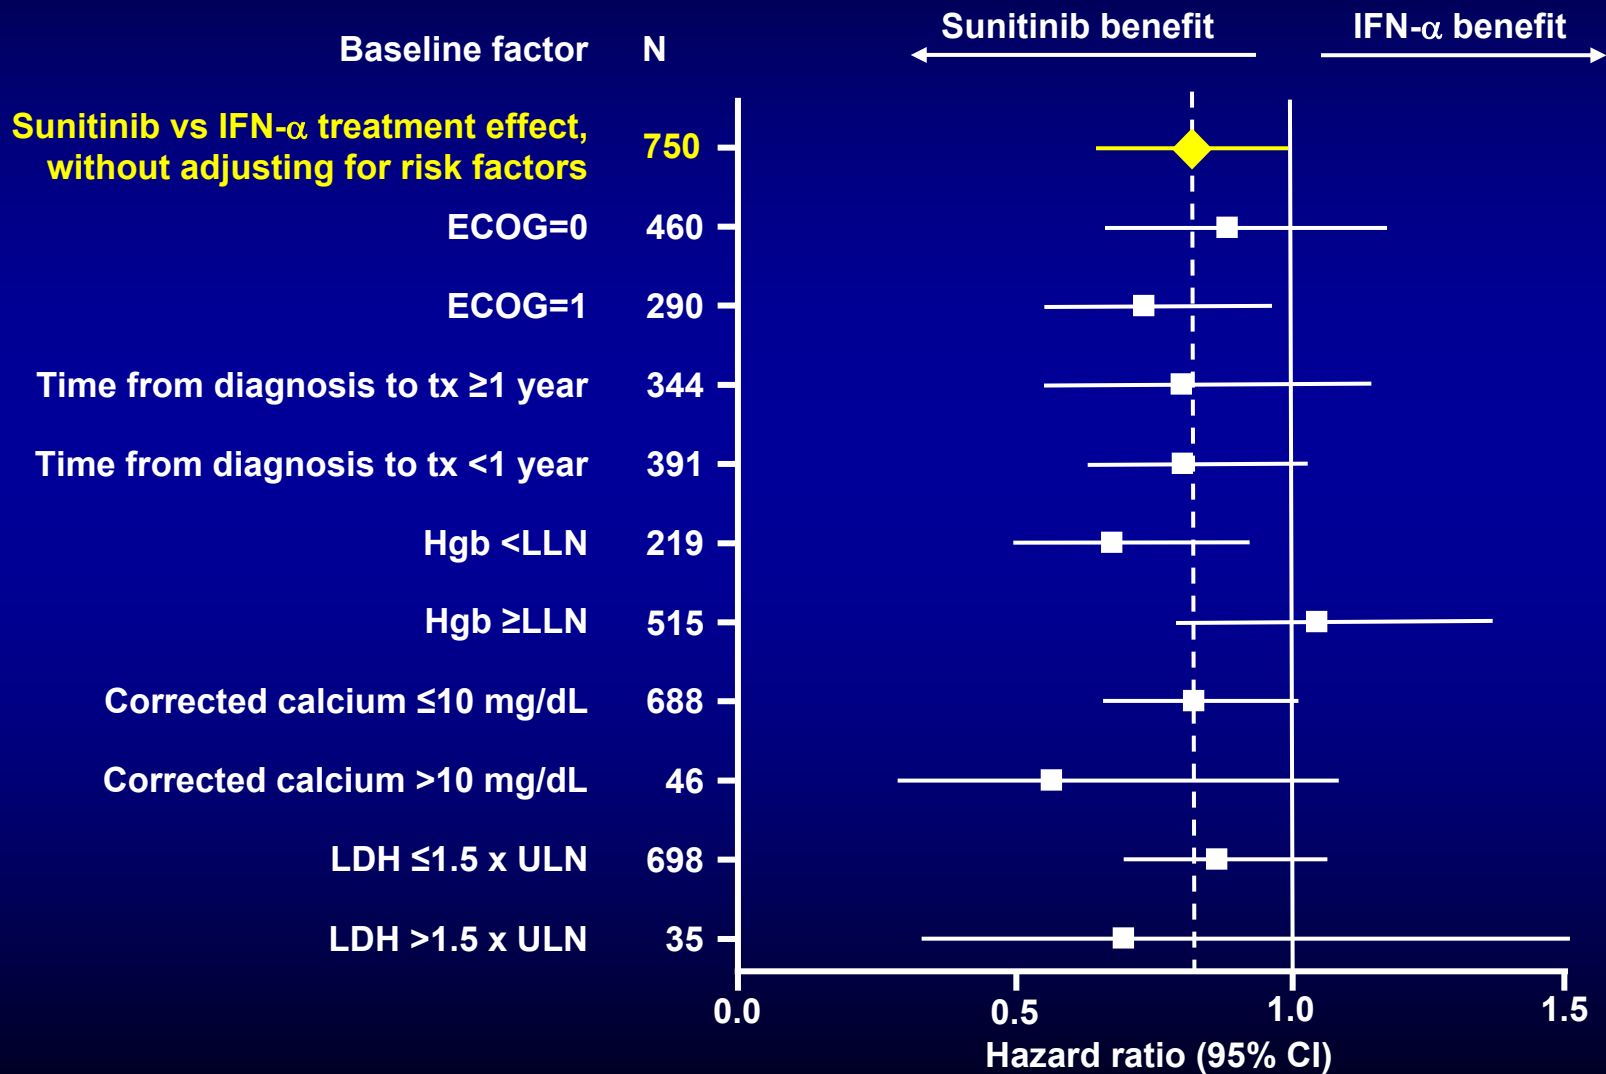

# OS in patients who did not receive any post-study treatment

\*Includes 20 patients who crossed over to sunitinib on study

# OS in Subgroups According to Individual Baseline Factors\*

\*Comparisons by individual baseline factors one at a time by Cox model

# Overall Survival Multivariate Analysis\*

	OS		
	HR	95% CI	P-value
ECOG PS (0 vs. 1)	0.515	0.417 – 0.636	<0.0001
Hemoglobin ( $\geq$ LLN vs. <LLN)	0.504	0.401 – 0.634	<0.0001
Time from diagnosis to tx ( $\geq$ 1 yr vs. <1 yr)	0.574	0.461 – 0.715	<0.0001
Corrected calcium ( $\leq$ 10 vs. >10 mg/dL)	0.466	0.327 – 0.664	<0.0001
Alkaline phosphatase ( $\leq$ ULN vs. >ULN)	0.676	0.542 – 0.844	0.0005
LDH ( $\leq$ 1.5 vs. >1.5 x ULN)	0.500	0.337 – 0.742	0.0006
No. of metastatic sites (1 vs. $\geq$ 2)	0.664	0.503 – 0.876	0.0037
<b>Treatment (sunitinib vs. IFN-<math>\alpha</math>)</b>	<b>0.764</b>	<b>0.623 – 0.936</b>	<b>0.0096</b>

\*Treatment comparisons controlling for baseline factors simultaneously from Cox model

# Conclusions

---

- ◆ **Sunitinib has demonstrated a survival advantage compared to IFN- $\alpha$**
- ◆ **Sunitinib has consistently demonstrated improvements in PFS and ORR compared to IFN- $\alpha$**
- ◆ **Sunitinib is the reference standard for the first-line treatment of mRCC**
