Decision to move the existing TA494 guidance to the static list

We would like to update you on the decision made regarding the review of the existing guidance on TA494; Naltrexone-bupropion (prolonged release) for managing overweight and obesity.

There is no new evidence that would lead to a change in the existing recommendations. TA494 will move to the static list and the forthcoming update of CG189 (Obesity: identification, assessment and management) will cross-refer to the recommendations.

Topics on the static list may be transferred back to the active list for further appraisal if new evidence becomes available that is likely to have a material effect on the last guidance issued.
