

Brodalumab for treating moderate to severe plaque psoriasis

Information for the public

Published: 21 March 2018

www.nice.org.uk

Brodalumab (Kyntheum) is available on the NHS as a possible treatment for plaque psoriasis in adults if:

- the psoriasis is severe and affects quality of life and
- the psoriasis has not improved with other treatments, for example ciclosporin, methotrexate and PUVA (psoralen and long-wave ultraviolet radiation), or these can't be taken.

Treatment with brodalumab should be stopped after 12 weeks if the psoriasis does not improve enough.

When assessing how psoriasis affects your quality of life, healthcare professionals should take into account any disabilities or difficulties in communicating you might have.

If you are not eligible for brodalumab but are already taking it, you should be able to continue until you and your doctor decide when best to stop.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. Read more about [making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support
