

Alectinib for untreated ALK-positive advanced non-small-cell lung cancer

Information for the public
Published: 8 August 2018

www.nice.org.uk

Alectinib (Alecensa) is available on the NHS. It is a possible treatment for anaplastic lymphoma kinase (ALK)-positive, advanced non-small-cell lung cancer in adults, when the cancer hasn't been treated before.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. Read more about [making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support
