

# Atezolizumab with bevacizumab for treating advanced or unresectable hepatocellular carcinoma

Information for the public

Published: 16 December 2020

[www.nice.org.uk](http://www.nice.org.uk)

Atezolizumab (Tecentriq) plus bevacizumab (Avastin) is available on the NHS. It is a possible treatment for hepatocellular carcinoma that has not been treated before in adults, if:

- it is advanced or cannot be removed by surgery (unresectable) and
- they have Child-Pugh grade A liver impairment and an Eastern Cooperative Oncology Group status of 0 or 1.

If you are not eligible for atezolizumab plus bevacizumab but are already having it, you should be able to continue until you and your doctor decide when best to stop.

## Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. Read more about [making decisions about your care](#).

## Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

## Information and support

The [NHS website](#) may be a good place to find out more.

These organisations can give you advice and support:

- [British Liver Trust](#), 0800 652 7330
