## No significant resource impact is anticipated

NICE has recommended budesonide as an option for inducing remission of eosinophilic oesophagitis in adults.

We do not expect this guidance to have a significant impact on resources; that is, the resource impact of implementing the recommendations in England will be less than £5 million per year in England (or approximately £9,000 per 100,000 population, based on a population for England of 56.3m).

This is because the overall incremental cost of treatment is low and eosinophilic oesophagitis is a rare condition affecting around 13,000 people in England.

This technology is commissioned by integrated care systems / clinical commissioning groups. Providers are NHS hospital trusts.
