## Health Technology Appraisal

### Nivolumab with ipilimumab and chemotherapy for untreated metastatic non-small-cell lung cancer [ID1566]

#### Final scope

##### Draft remit/appraisal objective

To appraise the clinical and cost effectiveness of nivolumab with ipilimumab and standard chemotherapy (platinum-based combination chemotherapy) within its marketing authorisation for untreated metastatic non-small-cell lung cancer.

##### Background

Lung cancer falls into 2 main histological categories: 85-90% are non-small-cell lung cancers (NSCLC) and 10-15% are small-cell lung cancers<sup>1</sup>. NSCLC can be further classified into squamous cell carcinoma and non-squamous cell carcinoma. Approximately 70% of NSCLC are of non-squamous histology and can be either large-cell undifferentiated carcinoma or adenocarcinoma<sup>2</sup>. Most lung cancers are diagnosed at an advanced stage, when the cancer has spread to lymph nodes and other organs in the chest (locally advanced disease; stage III) or to other parts of the body (metastatic disease; stage IV). In 2016, approximately 32,500 people were diagnosed with NSCLC in England, and around 61% had stage IIIB or stage IV disease<sup>3</sup>.

Lung cancer caused over 35,620 deaths in England in 2016<sup>4</sup>. Thirty two percent of people with lung cancer survive for more than 1 year after diagnosis<sup>5</sup>.

For the majority of people with NSCLC, the aims of treatment are to prolong survival and improve quality of life. Treatment choices are influenced by the presence of biological markers (such as mutations in epidermal growth factor receptor-tyrosine kinase (EGFR), anaplastic-lymphoma-kinase (ALK) or programmed death-ligand 1 (PD-L1) status), histology (squamous or non-squamous) and previous treatment experience.

NICE guideline 122 recommends platinum combination chemotherapy (that is, cisplatin or carboplatin, and either docetaxel, gemcitabine, paclitaxel, or vinorelbine) as an option for people with previously untreated stage III or IV NSCLC and good performance status. Alternatively, people may receive pemetrexed in combination with cisplatin if the histology of the tumour has been confirmed as adenocarcinoma or large-cell carcinoma (non-squamous) (NICE technology appraisal guidance 181). NICE technology appraisal guidance 584 recommends atezolizumab with bevacizumab, carboplatin and paclitaxel as an option for untreated non-squamous NSCLC if the tumour expresses PD-L1 with less than 50% tumour proportion score and has no

EGFR- or ALK-positive mutations. NICE technology appraisal guidance 531 recommends pembrolizumab monotherapy as an option for untreated PD-L1-positive metastatic NSCLC if the tumour expresses PD-L1 with at least 50% tumour proportion score and has no EGFR- or ALK-positive mutations. NICE technology appraisal guidance 557 recommends pembrolizumab combination therapy for use within the Cancer Drugs Fund, as an option for metastatic untreated non-squamous NSCLC if the tumour has no EGFR- or ALK-positive mutations. NICE technology appraisal guidance 600 recommends pembrolizumab with carboplatin and paclitaxel with the Cancer Drugs Fund, as an option for metastatic untreated squamous NSCLC<sup>a</sup>.

For non-squamous NSCLC that has not progressed immediately following initial therapy with a NICE-recommended platinum-based chemotherapy regimen, maintenance treatment with pemetrexed is recommended as an option (NICE TA190 and 402).

### **The technology**

Nivolumab (Opdivo, Bristol-Myers Squibb) is a fully humanised IgG4 monoclonal antibody which targets and blocks the PD-L1 receptor, to promote an anti-tumour immune response. It is administered intravenously.

Ipilimumab (Yervoy, Bristol-Myers Squibb) is a recombinant human anti-CTLA-4 monoclonal antibody which blocks the effects of CTLA-4 to enhance T-cell mediated immune responses to tumour cells. It is administered intravenously.

Nivolumab with ipilimumab and standard chemotherapy for untreated metastatic NSCLC does not currently have a marketing authorisation in the UK. It has been studied in a clinical trial compared with chemotherapy (pemetrexed or paclitaxel, with platinum therapy) alone in adults with untreated metastatic NSCLC without EGFR or ALK mutations.

---

<sup>a</sup> Products recommended for use in the Cancer Drugs Fund after 1 April 2016 should not be considered as comparators, or appropriately included in a treatment sequence, in subsequent relevant appraisals. <https://www.nice.org.uk/Media/Default/About/what-we-do/NICE-guidance/NICE-technology-appraisal-guidance/cancer-drugs-fund/CDF-comparator-position-statement.pdf>

<b>Intervention</b>	Nivolumab with ipilimumab and standard chemotherapy
<b>Population</b>	Adults with untreated metastatic NSCLC without sensitizing EGFR mutations or ALK fusions
<b>Comparators</b>	<p>For adults with non-squamous histology:</p> <ul style="list-style-type: none"> <li>• Pemetrexed in combination with a platinum drug (carboplatin or cisplatin) (for people with adenocarcinoma or large-cell carcinoma only) <ul style="list-style-type: none"> <li>○ with (following cisplatin-containing regimens only) or without pemetrexed maintenance treatment</li> </ul> </li> <li>• Chemotherapy (docetaxel, gemcitabine, paclitaxel or vinorelbine) in combination with a platinum drug (carboplatin or cisplatin) <ul style="list-style-type: none"> <li>○ with or without pemetrexed maintenance treatment</li> </ul> </li> <li>• Atezolizumab with bevacizumab, carboplatin and paclitaxel (for people whose tumours express PD-L1 with less than 50% tumour proportion score)</li> <li>• Pembrolizumab (for people whose tumours express PD-L1 with at least a 50% tumour proportion score)</li> </ul> <p>For adults with squamous histology:</p> <ul style="list-style-type: none"> <li>• Chemotherapy (docetaxel, gemcitabine, paclitaxel or vinorelbine) in combination with a platinum drug (carboplatin or cisplatin)</li> <li>• Pembrolizumab (for people whose tumours express PD-L1 with at least a 50% tumour proportion score)</li> </ul>
<b>Outcomes</b>	<p>The outcome measures to be considered include:</p> <ul style="list-style-type: none"> <li>• overall survival</li> <li>• progression-free survival</li> <li>• response rate</li> <li>• adverse effects of treatment</li> <li>• health-related quality of life</li> </ul>

<p><b>Economic analysis</b></p>	<p>The reference case stipulates that the cost effectiveness of treatments should be expressed in terms of incremental cost per quality-adjusted life year.</p> <p>If the technology is likely to provide similar or greater health benefits at similar or lower cost than technologies recommended in published NICE technology appraisal guidance for the same indication, a cost-comparison may be carried out.</p> <p>The reference case stipulates that the time horizon for estimating clinical and cost effectiveness should be sufficiently long to reflect any differences in costs or outcomes between the technologies being compared.</p> <p>Costs will be considered from an NHS and Personal Social Services perspective.</p> <p>The availability of any patient access schemes for the intervention or comparator technologies will be taken into account.</p> <p>If appropriate, the economic modelling should include the costs associated with diagnostic testing for biological markers (for example PD-L1) in people with NSCLC who would not otherwise have been tested. A sensitivity analysis should be provided without the cost of the diagnostic test. <a href="#">See section 5.9 of the Guide to the Methods of Technology Appraisals.</a></p>
<p><b>Other considerations</b></p>	<p>If evidence allows, subgroup analysis by level of PD-L1 expression will be considered.</p> <p>Guidance will only be issued in accordance with the marketing authorisation. Where the wording of the therapeutic indication does not include specific treatment combinations, guidance will be issued only in the context of the evidence that has underpinned the marketing authorisation granted by the regulator.</p>
