

Dabrafenib plus trametinib for treating BRAF V600 mutation-positive advanced non-small-cell lung cancer

Information for the public

Published: 14 June 2023

www.nice.org.uk

Dabrafenib (Tafinlar) plus trametinib (Mekinist) is available on the NHS. It is a possible treatment for BRAF V600 mutation-positive advanced non-small-cell lung cancer in adults if it is the first treatment they have for the advanced stage of the cancer.

If you are not eligible for dabrafenib plus trametinib but are already having it, you should be able to continue until you and your doctor decide when best to stop.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support

The [NHS webpage on lung cancer](#) may be a good place to find out more.

These organisations can give you advice and support:
