Subject: HealOzone Consultation

Dear Sarah,

My apologies in that we are late on the deadline for comments on the Healozone Assessment Report.

We have only a fairly brief comment to make (detailed observations have been made as a part of the process by Faculty nominated experts):

The Faculty wholly supports the conclusions on page 88 of the report - the current evidence base for HealOzone is insufficient to draw conclusions.

If it is possible for this brief comment to be included would be grateful.

Best wishes

Ian Pocock

Dear Dr Cumbers

Please find below a comment from Peter Sanders, Chairman of the Lay Advisory Group at the Faculty of General Dental Practitioners on the above report:

'I support the need for further research which must also clearly identify any cost and pain reductions to the patient'.
This is the groups initial comment on the technical content of the report.
Kind regards

Liz Bugg (Miss)
Executive Assistant

Faculty of General Dental Practitioners (UK)
