

Belumosudil for treating chronic graft-versus-host disease after 2 or more systemic treatments in people 12 years and over

Information for the public

Published: 7 February 2024

www.nice.org.uk

Belumosudil (Rezurock) is available on the NHS as a possible treatment for chronic graft-versus-host disease in people 12 years and over after 2 or more systemic treatments. Systemic treatments are medicines that work throughout the whole body. They can include injections, infusions or medicines taken by mouth.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?

Information and support

The [NHS webpage on stem cell transplant](#) may be a good place to find out more.

[Anthony Nolan](#) (0303 303 0303) can give you advice and support.
