

Epcoritamab for treating relapsed or refractory diffuse large B-cell lymphoma after 2 or more systemic treatments

Information for the public

Published: 6 March 2024

www.nice.org.uk

Epcoritamab (Tepkinly) is available on the NHS. It is a possible treatment for relapsed or refractory diffuse large B-cell lymphoma after 2 or more systemic treatments in adults, if they have had polatuzumab vedotin, or if they cannot have it.

Systemic treatments work throughout the whole body. They can include injections, infusions or medicines taken by mouth. Epcoritamab is given by injection.

Is this treatment right for me?

Your healthcare professionals should give you clear information, talk with you about your options and listen carefully to your views and concerns. Your family can be involved too, if you wish. See [our webpage on making decisions about your care](#).

Questions to think about

- How well does it work compared with other treatments?
- What are the risks or side effects? How likely are they?
- How will the treatment affect my day-to-day life?
- What happens if the treatment does not work?
- What happens if I do not want to have treatment? Are there other treatments available?
