

Dupilumab for treating moderate to severe prurigo nodularis

Information for the public
Published: 13 March 2024

www.nice.org.uk

Dupilumab (Dupixent) is not normally available on the NHS for treating moderate to severe prurigo nodularis in adults when systemic treatment is suitable. Systemic treatments are treatments that work throughout the whole body. They can include injections, infusions or medicines taken by mouth.

Your doctor should talk with you about other treatment options. If you are already having it, you should be able to continue until you and your doctor decide when best to stop.

Information and support

Prurigo Nodularis International (01925 246800, info@prurigonodularis.org) can give you advice and support.

You can also get support from your local [Healthwatch](#).
