## Indicator

The percentage of patients with diabetes, on the register, in whom the last IFCC-HbA1c is 58 mmol/mol or less in the preceding 12 months.

## Resource impact

This statement covers a new indicator that is part of the NICE menu of potential Quality and Outcomes Framework (QOF) indicators for 2017/18, following the recommendations of the NICE indicators advisory committee in June 2016.

The current QOF already incentivises this area in an existing QOF indicator that may be replaced by IND165:

- DM007: The percentage of patients with diabetes, on the register, in whom the last IFCC-HbA1c is 59 mmol/mol or less in the preceding 12 months.

The underlying achievement for DM007 in 2014/15 was around 70% (see the [Quality and Outcomes Framework 2014/15](#)). The change in threshold from 59 to 58 mmol/mol is not expected to lead to a significant change in clinical practice. As a result, no resource impact is expected from introducing IND165.
