## Indicator Equality Impact Assessment

### Topic: IND166 Diabetes – CVD primary prevention type 1 diabetes

1.1 Have any potential equality issues been identified during the development process?

No equality issues have been identified.

1.2 Have any population groups, treatments or settings been excluded from coverage by the indicator? Are these exclusions justified – that is, are the reasons legitimate and the exclusion proportionate?

This indicator focusses on statin therapy for people with type 1 diabetes aged 40 years and older. People with type 2 diabetes are covered by separate indicators.

1.3 Does the indicator make it more difficult in practice for a specific group to access services compared with other groups? If so, what are the barriers to, or difficulties with, access for the specific group?

The indicator does not affect access for different groups.

1.4 Is there potential for the indicator to have an adverse impact on people with disabilities because of something that is a consequence of the disability?

No potential impact has been identified.
