

NATIONAL INSTITUTE FOR HEALTH AND CARE EXCELLENCE

Indicator Equality Impact Assessment

Topic: Vaccinations and immunisations

1.1 Have any potential equality issues been identified during the development process?

No potential equality issues for the specific indicators have been identified during the development process. Wider health inequality around vaccination uptake, for example in hard-to reach populations was discussed in the indicator advisory committee meeting in September 2021.

1.2 Have any population groups, treatments or settings been excluded from coverage by the indicator? Are these exclusions justified – that is, are the reasons legitimate and the exclusion proportionate?

Exclusions are justified. They are based on information taken from [the Green Book from Public Health England](#) (2021) and detail contraindication to vaccination.

1.3 Does the indicator make it more difficult in practice for a specific group to access services compared with other groups? If so, what are the barriers to, or difficulties with, access for the specific group?

The indicators do not make it difficult for specific groups to access services.

1.4 Is there potential for the indicator to have an adverse impact on people with disabilities because of something that is a consequence of the disability?

The indicators do not have the potential to have an adverse impact on people with disabilities.
