Indicator

The percentage of patients on the learning disability register who received a learning disability health check and had a completed health action plan in the preceding 12 months.

Resource impact

Existing indicator **IND119** is as follows:

The contractor establishes and maintains a register of patients with learning disabilities.

The proposed indicator is expected to lead to an increase in the number of people on the learning disability register who receive a learning disability health check and have a completed health action plan in the preceding 12 months. [Quality and Outcomes Framework](#) (QOF) data for 2021/22 shows that an average practice with 10,000 patients would have around 55 eligible patients.

[2021/22 Network contract directed enhanced service data](#) show that

64% of people aged 14 and over on the QOF learning disability register received an annual health check and a health action plan. This leaves around 20 people per practice who do not currently receive a learning disability health check and have a completed health action plan in the preceding 12 months.

There may be an impact on general practice as a result of more health action plans being completed. Due to the small numbers involved, the impact on general practice is anticipated to be minimal but this will be determined by current practice.
